- $\bullet \ Simple \ Order \ API \ Field: ccAuth Service_partial Auth Indicator$

authorization Information. approval Code

Authorization code.

This field is returned only when the value is sent by the processor.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 6

- REST API Field: authorizationInformation.approvalCode
- SCMP API Field: auth_reversal_auth_code
- Simple Order API Field: ccAuthReversalReply_authorizationCode

authorizationInformation.reasonCode

Response flag for the original transaction.

Specifications

• Type: String

• **Length**: 50

- REST Field: authorizationInformation.reasonCode
- SCMP API Field: original_transaction_rflag
- Simple Order API Field: No corresponding field

authorizationInformation.reversalSubmitted

Flag that indicates whether a full authorization reversal was successfully submitted.

This field is returned only for FDC Nashville Global.

Possible values:

- Y: Authorization reversal was successfully submitted.
- N: Authorization reversal was not successfully submitted. You must send a credit request for a refund.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- REST API Field: authorizationInformation.reversalSubmitted
- SCMP API Field: reversal_submitted
- Simple Order API Field: voidReply_reversalSubmitted

buyerInformation.companyTaxId

Tax identifier for the customer's company.

This field is supported only for these kinds of payments on Visa Platform Connect:

- BNDES transactions
- Installment payments with Mastercard

Set the value for this field to the Cadastro Nacional da Pessoa Jurídica (CNPJ). The request must include this field or **buyerInformation.personalIdentification[].id** and **buyerInformation.personalIdentification[].id** and **buyerInformation.personalIdentification[].id** and **buyerInformation.personalIdentification[].type** fields is are sent to the processor and the **buyerInformation.companyTaxId** field is ignored.

For BNDES transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR6

• Position: 26-39

• Field: Buyer ID

For installment payments with Mastercard in Brazil, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR4

• Position: 26-39

• Field: Buyer ID

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 9

Mapping Information

• REST API Field: buyerInformation.companyTaxId

• SCMP API Field: bill_company_tax_id

• Simple Order API Field: billTo_companyTaxID

buyerInformation.merchantCustomerId

Your identifier for the customer.

Credit Mutuel-CIC

For recurring payments in Mexico, the value for this field is the customer's contract number.

Before you request the authorization, you must inform the issuer about the customer contract numbers that will be used for recurring transactions.

Ingenico ePayments

The value for this field cannot include spaces.

Prosa

For recurring payments in Mexico, the value for this field is the customer's contract number.

Worldpay VAP

For a follow-on credit, Cybersource checks the following locations, in the order given, for a customer account ID value and uses the first value it finds:

- 1. **buyerInformation.merchantCustomerId** value in the follow-on credit request.
- 2. **buyerInformation.merchantCustomerId** value that was used for the capture that is being credited.
- 3. **buyerInformation.merchantCustomerId** value that was used for the original authorization.

If a customer account ID value cannot be found in any of these locations, then no value is used.

Specifications

• Credit Mutuel-CIC:

• Field Type: Request

• Data Type: String

• Data Length: 20

• Ingenico ePayments:

• Field Type: Request

• **Data Type:** String

• Data Length: 15

The following list provides the Level II/Level III processor field name for each processor that supports Level II or Level III data:

• FDMS South: N/A

buyerInformation.mobilePhone

Cardholder's mobile phone number.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 25

- REST API Field: buyerInformation.mobilePhone
- SCMP API Field: pa_mobile_phone
- Simple Order API Field: payerAuthEnrollService_mobilePhone

buyerInformation.personalIdentification[].id

Identifier for the customer.

This field is supported only on Cielo 3.0, Credit Mutuel-CIC, Cybersource Latin American Processing and Visa Platform Connect.

Cielo 3.0

Set this field to the Cadastro Nacional da Pessoa Jurídica (CNPJ) or Cadastro de Pessoas Fisicas (CPF).

Credit Mutuel-CIC

Set this field to the Cadastro de Pessoas Fisicas (CPF).

Cybersource Latin American Processing

This field is supported only for Redecard in Brazil. Set this field to the Cadastro de Pessoas Fisicas (CPF), which is required for AVS for Redecard in Brazil.

Cybersource Latin American Processing is the name of a specific processing connection. Cybersource Latin American Processing does not refer to the general topic of processing in Latin America. The information in this field description, or in this section of the field description, is for the specific processing connection called Cybersource Latin American Processing. It is not for any other Latin American processors.

Visa Platform Connect

This field is supported only for these kinds of payments:

- BNDES transactions
- Installment payments with Mastercard in Brazil

Set this field to the Cadastro de Pessoas Fisicas (CPF). The request must include this field or **buyerInformation.companyTaxId**.

For BNDES transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR2

• Position: 7-21

• Field: Cardholder Tax ID

For installment payments with Mastercard in Brazil, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR4

• Position: 26-39

• Field: Buyer ID

card Encryption Ksi

Key serial identifier of the card encryption Base Derivation Key (BDK) that is loaded on the terminal.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request and Response

• Data Type: String

• Data Length: 32

Mapping Information

• REST API Field: cardEncryptionKsi

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

clientReferenceInformation.code (Request)

Order reference or tracking number that you generate.

You should provide a unique value for each transaction so that you can perform meaningful searches for the transaction. Refer to the *Getting Started with Cybersource Advanced* guide.

(Important: Depending on your merchant configuration, the value for this field may be required to be unique within a 15-minute period. Please contact customer support to confirm whether this requirement applies to your merchant configuration.

Card-Not-Present Transactions

FDC Nashville Global: Certain circumstances can cause the processor to truncate this value to 15 or 17 characters for Level II and Level III processing, which can cause a discrepancy between the value you submit and the value included in some processor reports.

Card-Present Transactions

FDC Nashville Global: The value for this field must be numeric and must be fewer than 9 digits. When you do not send a valid value, Cybersource creates one for you. However, the value is not returned to you, so you cannot use the merchant reference number to track the order.

PIN Debit Transactions

Requests for PIN debit reversals need to use the same merchant reference number that was used in the transaction that is being reversed.

Specifications

- · Asia, Middle East, and Africa Gateway:

- SCMP API Field: merchant_ref_number
- $\bullet \ Simple \ Order \ API \ Field: merchant Reference Code$

clientReferenceInformation.code (Response)

Order reference or tracking number that you provided in the request.

If you included multi-byte characters in this field in the request, the returned value might include corrupted characters.

(Important: Depending on your merchant configuration, the value for this field may be required to be unique within a 15-minute period. Please contact Customer Support to confirm whether this requirement applies to your merchant configuration.

FDC Nashville Global

When a card-present request does not include a merchant reference number, this value is provided by the client software that is installed on the POS terminal.

Sometimes the processor truncates this value to 15 or 17 characters for Level II and Level III processing. This can cause a discrepancy between the value you submit and the value included in some processor reports.

SIX

When a card-present request does not include a merchant reference number, this value is provided by the client software that is installed on the POS terminal.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 50

- REST API Field: clientReferenceInformation.code
- SCMP API Field: merchant_ref_number
- $\bullet \ Simple \ Order \ API \ Field: merchant Reference Code$

clientReferenceInformation.partner.originalTransactionId

Value that links the previous transaction to the current follow-on request.

This value is assigned by the client software that is installed on the POS terminal, which makes it available to the terminal's software and to Cybersource. Therefore, you can use this value to reconcile transactions between Cybersource and the terminal's software.

This value is not sent to the processor. Instead, the value is forwarded to the Cybersource reporting software.

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 32

- REST API Field: clientReferenceInformation.partner.originalTransactionId
- SCMP API Field: partner_original_transaction_id
- Simple Order API Field: partnerOriginalTransactionID

client Reference Information. partner. third Party Certification Number

Value that identifies the application vendor and application version for a third party gateway.

This field is supported only on Visa Platform Connect .

You are provided with this value during testing and validation.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 12

- REST API Field: clientReferenceInformation.partner.thirdPartyCertificationNumber
- SCMP API Field: third_party_certification_number
- Simple Order API Field: thirdPartyCertificationNumber

client Reference Information. submit Local Date Time

Local date and time at your physical location.

Format: YYYYMMDDhhmmss

- MM = month
- YYYY = year
- DD = day
- hh = hour
- mm = minutes
- ss = seconds

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 14

- REST API Field: clientReferenceInformation.submitLocalDateTime
- SCMP API Field: transaction_local_date_time

• Simple Order API Field: transactionLocalDateTime

clientReferenceInformation.transactionId

Identifier that you assign to the transaction.

Optional field for PIN debit purchase or credit requests.

PIN Debit Reversal Transactions

For a PIN debit reversal, your request must include a request ID or a merchant transaction identifier. The suggested format for this value is:

- Positions 1-4: Last four charcters or your merchant ID
- Postions 5-7: Julian date. Format: ddd
- Positions 8-13: Time stamp. Format: hhmmss
- **Positions 14-15:** Two random characters. One way to generate two random characters is to use a counter from 01-99.

Specifications

• Field Type: Request

• Data Type: String

• Data Length:

∘ Credit Card Transactions: 30

• PIN Debit Transactions: 15

- REST API Field: clientReferenceInformation.transactionId
- $\bullet \ SCMP \ API \ Field: merchant_transaction_identifier$
- Simple Order API Field: merchantTransactionIdentifier

clientReferenceInformation.transactionId

Transaction identifier generated by the processor.

Specifications

• Field Type: Response

• Data Type: Integer

• Data Length: 15

- REST API Field: processorInformation.transactionId
- SCMP API Field: pin_debit_credit_transaction_id
- Simple Order API Field: pinDebitCreditReply_transactionID

comment

Addtional comments about the state of the terminal.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 256

Mapping Information

• REST API Field: comment

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

configVersion

Version of the terminal software configuration profile.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 64

Mapping Information

• REST API Field: configVersion

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

consumer Authentication Information.xid

Transaction identifier.

This value must be 28-character Base64 or 40-character hex binary.

For Visa Secure on FDC Nashville Global, the CAVV field is set to the XID value when the XID is present in the authorization request and the CAVV is not present.

When you request the payer authentication and authorization services separately, get the value for this field from the response field.

Apple Pay and Samsung Pay Transactions

- American Express: For a 20-byte cryptogram, set this field to the cryptogram for authorizations with payment network tokens. For a 40-byte cryptogram, set this field to block A of the cryptogram for authorizations with payment network tokens. All cryptograms use one of these formats.
- Visa: The value for this field must be 28-character base64 or 40-character hex binary. All cryptograms use one of these formats.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 40

Mapping Information

• REST API Field: consumerAuthenticationInformation.xid

• SCMP API Field: xid

 $\bullet \ Simple \ Order \ API \ Field: ccAuth Service_xid$

consumerAuthenticationInformation.acsTransactionId

Transaction ID generated by the access control server.

This field is supported only for Cartes Bancaires Fast'R transactions on Credit Mutuel-CIC.

When you request the payer authentication and authorization services separately, get the value for this field from the **consumerAuthenticationInformation.acsTransactionId** response field.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 36

- REST API Field: consumerAuthenticationInformation.acsTransactionId
- SCMP API Field: acs_server_transaction_id
- Simple Order API Field: ccAuthService_acsServerTransactionID

consumerAuthenticationInformation.acsWindowSize

You can send this override field to set the challenge window size to display to the cardholder. The Access Control Server (ACS) replies with content that is formatted appropriately for this window size to allow for the best user experience.

The sizes are width x height in pixels of the window displayed in the cardholder browser. Possible values:

- 01: 250x400
- 02: 390x400
- 03: 500x600
- 04: 600x400
- 05: Full page

Specifications

- Field Type: Request
- Data Type: String
- Data Length: 2

- REST API Field: consumerAuthenticationInformation.acsWindowSize
- SCMP API Field: pa_acs_window_size

 $\bullet \ Simple \ Order \ API \ Field: payer Auth Enroll Service_acs Window Size$

consumer Authentication Information. alternate Authentication Data

Data that documents and supports a specific authentication process.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2048

Mapping Information

• REST API Field: consumerAuthenticationInformation.alternateAuthenticationData

• SCMP API Field: pa_alternate_authentication_data

• Simple Order API Field: payerAuthEnrollService_alternateAuthenticationData

consumer Authentication Information. alternate Authentication Date

Date and time in UTC of the cardholder authentication.

Format: YYYYMMDDHHMM

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 14

- REST API Field: consumerAuthenticationInformation.alternateAuthenticationDate
- SCMP API Field: pa_alternate_authentication_date
- Simple Order API Field: payerAuthEnrollService_alternateAuthenticationDate

consumerAuthenticationInformation.alternateAuthenticationMethod

Mechanism used by the cardholder to authenticate to the 3D Secure requestor.

Possible values:

- 01: No authentication occurred
- 02: Login using merchant system credentials
- 03: Login using Federated ID
- 04: Login using issuer credentials
- 05: Login using third-party authenticator
- 06: Login using FIDO Authenticator

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.alternateAuthenticationMethod
- SCMP API Field: pa_alternate_authentication_method

 $\bullet \ Simple \ Order \ API \ Field: payer Auth Enroll Service_alternate Authentication Method$

consumerAuthenticationInformation.authenticationDate

Date and time that the 3D Secure server authenticated the cardholder.

This field is supported only for Cartes Bancaires Fast'R transactions on Credit Mutuel-CIC.

Format: YYYYMMDDHHMMSS

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 14

- REST API Field: consumerAuthenticationInformation.authenticationDate
- SCMP API Field: pa_authentication_date
- Simple Order API Field: ccAuthService_paAuthenticationDate

consumerAuthenticationInformation.authenticationTransactionId

Payer authentication transaction identifier passed to link the check enrollment and validate authentication messages.

Specifications

• Field Type:Request

• Data Type: String

• Data Length: 20

- REST API Field: consumerAuthenticationInformation.authenticationTransactionId
- SCMP API Field: pa_authentication_transaction_id
- Simple Order API Fields:
 - $^{\circ}~payer Auth Enroll Service_authentication Transaction ID$
 - $^{\circ}$ payerAuthValidateService_authenticationTransactionID

consumerAuthenticationInformation.cavv

Cardholder authentication verification value (CAVV).

This value is a transaction identifier generated by the issuing bank during Visa Secure, JCB J/Secure, or ProtectBuy payer authentication.

This value must be 28-character Base64 or 40-character hex binary.

For Visa Secure on FDC Nashville Global, this field is set to the value for the transaction identifier (XID) when the XID is present in the authorization request and the CAVV is not present.

When you request the payer authentication and authorization services separately, get the value for this field from the **consumerAuthenticationInformation.cavv** response field.

Apple Pay and Samsung Pay Transactions

- American Express: for a 20-byte cryptogram, set this field to the cryptogram for authorizations with payment network tokens. For a 40-byte cryptogram, set this field to block A of the cryptogram for authorizations with payment network tokens.
- Discover: the value for this field can be a 20 or 40-character hex binary. All cryptograms use of these formats.
- Visa: the value for this field must be 28-character base 64 or 40-character hex binary. All cryptograms use one of these formats.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 77-78

• Field: CAVV version and authentication action

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 40

Mapping Information

• REST API Field: consumerAuthenticationInformation.cavv

• SCMP API Field: cavv

• Simple Order API Field: ccAuthService_cavv

consumer Authentication Information. cavv Algorithm

Algorithm for generating a cardholder authentication verification value (CAVV) or universal cardholder authentication field (UCAF) data.

This field is supported only for these processors:

- Atos
- Credit Mutuel-CIC
- Ingenico ePayments when a third-party provider authenticates the transaction

When you request the payer authentication and authorization services separately, get the value for this field from the response field.

Possible values:

- 0: Hash-based message authentication code (HMAC)
- 1: Card verification value (CVV)
- 2: CVV with authentication transaction number (ATN)

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: consumer Authentication Information. cavv Algorithm$
- SCMP API Field: cavv_algorithm
- $\bullet \ Simple \ Order \ API \ Field: ccAuth Service_cavv Algorithm$

consumer Authentication Information. challenge Cancel Code

Reason that the strong customer authentication was canceled.

This field is supported only for Cartes Bancaires Fast'R transactions on Credit Mutuel-CIC.

The transaction was not cancelled. It was sent to the payment card company and the issuer who can reject it with a soft decline by requesting additional cardholder authentication.

Possible values:

- 01: Cardholder selected Cancel.
- 03: Decoupled authentication caused the transaction to time out.
- 04: Transaction timed out at the access control server (ACS), which is a server on the issuer side of the 3D Secure protocol. This value includes all ACS timeouts not covered by the value 05.
- 05: Transaction timed out at the ACS because the first challenge request was not received by the ACS.
- 06: Transaction error as determined by the 3D Secure server.
- 07: Unknown.
- 08: Cybersource software timed out.

When you request the payer authentication and authorization services separately, get the value for this field from the **consumerAuthenticationInformation.challengeCancelCode** response field.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.challengeCancelCode
- SCMP API Field: challenge_cancel_code
- Simple Order API Field: ccAuthService_challengeCancelCode

consumer Authentication Information. challenge Code

Authentication type or challenge that you presented to the cardholder at checkout after requesting Cartes Bancaires Fast'R through the Cybersource payer authentication services.

This field is supported only for Cartes Bancaires Fast'R transactions on Credit Mutuel-CIC.

A *challenge* means that strong customer authentication is required. The challenge status does the following:

- Informs the issuer about the alternative authentication methods that the cardholder used.
- Enables you to override default values for one transaction at a time and increase the authorization acceptance rate at the risk of accepting a liability shift for the transaction.

Possible values:

- 01: No preference.
- 02: No challenge requested, but the reason is unknown.
- 03: You requested the challenge. You can default to this value for every transaction when you see an increase in fraud rates.
- 04: Challenge mandated. Strong customer authentication is required when one of the following is true:
 - Transaction amount exceeds 30 EUR and there have been at least five transactions on the payment card during the preceding week.
 - Cumulative amount for the payment card during the preceding week exceeds 100 EUR.
- 05: No challenge requested because transactional risk analysis has already been performed.
- 06: No challenge requested because the purpose of this transaction is to share data, not to move money.
- 07: No challenge requested because strong consumer authentication has already been performed.
- 08: No challenge requested because the cardholder is on a white list of exempt cardholders.

• 09: Challenge requested by issuer. Determine whether the cardholder is on a white list of exempt cardholders.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

Mapping Information

• REST API Field: consumerAuthenticationInformation.challengeCode

• SCMP API Field: pa_challenge_code

• Simple Order API Field: ccAuthService_paChallengeCode

consumerAuthenticationInformation.customerCardAlias

An alias that uniquely identifies the customer's account and credit card on file.

This field is required if Tokenization is enabled in the merchant profile settings.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 128

- REST API Field: consumerAuthenticationInformation.customerCardAlias
- SCMP API Field: pa_customer_cc_alias
- Simple Order API Field: payerAuthEnrollService_customerCCAlias

consumerAuthenticationInformation.defaultCard

Indicates that the card being used is the one designated as the primary payment card for purchase.

This field can contain one of these values:

- true
- false

Recommended for Discover ProtectBuy.

Specifications

• Field Type: Request

• Data Type: Boolean

- REST API Field: consumerAuthenticationInformation.defaultCard
- SCMP API Field: pa_default_card
- Simple Order API Field: payerAuthEnrollService_defaultCard

consumerAuthenticationInformation.deviceChannel

Indicates the channel used for the transaction.

Required for SDK integration. Possible Values:

- SDK
- Browser
- 3RI (3D Secure Integrator Request)

! Important: If you use the SDK integration, this field is dynamically set to SDK. If you use the JavaScript code, this field is dynamically set to Browser. For merchant-initiated or 3RI transactions, you must set the field to 3RI. If you use this field in addition to JavaScript code, you must set the field to Browser.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

- REST API Field: consumerAuthenticationInformation.deviceChannel
- SCMP API Field: pa_device_channel

• Simple Order API Field: payerAuthEnrollService_deviceChannel

consumer Authentication Information. directory Server Transaction Id

Transaction ID that the directory server generates during authentication.

When you request the payer authentication and authorization services separately, get the value for this field from the **consumerAuthenticationInformation.threeDSServerTransactionId** response field.

Mastercard Identity Check on Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR7

• Position: 114-149

• Field: MC AVV Verification—Directory Server Transaction ID

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 36

Mapping Information

 $\bullet \ REST\ API\ Field: consumer Authentication Information. directory Server Transaction Id$

- SCMP API Field: directory_server_transaction_id
- $\bullet \ Simple \ Order \ API \ Fields: ccAuth Service_directory Server Transaction ID$

consumerAuthenticationInformation.eciRaw

Raw electronic commerce indicator (ECI).

When you request the payer authentication and authorization services separately, get the value for this field from the response field.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: consumerAuthenticationInformation.eciRaw

• SCMP API Field: eci_raw

• Simple Order API Field: ccAuthService_eciRaw

consumer Authentication Information. effective Authentication Type

3D Secure transaction flow.

This field is supported only for Cartes Bancaires Fast'R transactions on Credit Mutuel-CIC.

When you request the payer authentication and authorization services separately, get the value for this field from the **consumerAuthenticationInformation.effectiveAuthenticationType** response field.

Possible values:

- CH: Challenge. Strong customer authentication is required. The cardholder must prove that they are present and enter the payment details by providing two of the following elements:
 - Something on the cardholder's body. Example: fingerprint.
 - Something the cardholder has. Examples: plastic card, mobile device, token generator.
 - Something the cardholder knows. Examples: PIN, password.
- FD: Frictionless with delegation. The issuer does not require cardholder authentication, but the payment card company might require it.
- FR: Frictionless. The transaction can proceed without cardholder authentication.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- $\bullet \ REST\ API\ Field: consumer Authentication Information. effective Authentication Type$
- SCMP API Field: effective_authentication_type
- Simple Order API Field: ccAuthService_effectiveAuthenticationType

consumerAuthenticationInformation.marketingOptIn

Indicates whether the customer has opted in for marketing offers.

This field can contain one of these values:

- true
- false

Recommended for Discover ProtectBuy.

Specifications

• Field Type: Request

• Data Type: Boolean

- REST API Field: consumerAuthenticationInformation.marketingOptIn
- SCMP API Field: pa_marketing_optin
- Simple Order API Field: payerAuthEnrollService_marketingOptIn

consumer Authentication Information. marketing Source

Indicates origin of the marketing offer.

Recommended for Discover ProtectBuy.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 40

- REST API Field: consumerAuthenticationInformation.marketingSource
- SCMP API Field: pa_marketing_source
- Simple Order API Field: payerAuthEnrollService_marketingSource

consumerAuthenticationInformation.mcc

Merchant category code.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 4

- REST API Field: consumerAuthenticationInformation.mcc
- SCMP API Field: pa_mcc
- Simple Order API Field: payerAuthEnrollService_MCC

consumerAuthenticationInformation.merchantFraudRate

Calculated by merchants according to Payment Service Directive 2 (PSD2) and Regulatory Technical Standards (RTS). European Economic Area (EEA) card fraud divided by all EEA card volumes.

Possible Values:

- 1: Represents fraud rate <=1
- 2: Represents fraud rate >1 and <=6
- 3: Represents fraud rate >6 and <=13
- 4: Represents fraud rate >13 and <=25
- 5: Represents fraud rate >25

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.merchantFraudRate
- SCMP API Field: pa_merchant_fraud_rate

 $\bullet \ Simple \ Order \ API \ Field: payer Auth Enroll Service_mer chant Fraud Rate$

consumer Authentication Information. merchant Score

Risk score provided by merchants.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.merchantScore
- SCMP API Field: pa_merchant_score
- Simple Order API Field: payerAuthEnrollService_merchantScore

consumer Authentication Information. message Category

Category of the message for a specific use case.

Possible values:

- 01: PA (payment authentication)
- 03-79: Reserved for EMVCo future use (values invalid until defined by EMVCo)
- 80-99: Reserved for directory server use

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.messageCategory
- SCMP API Field: pa_message_category
- Simple Order API Field: payerAuthEnrollService_messageCategory

consumerAuthenticationInformation.networkScore

Score calculated by the 3D Secure scoring platform.

This field is supported only for Cartes Bancaires Fast'R transactions on Credit Mutuel-CIC.

Possible values: 00 - 99.

When you request the payer authentication and authorization services separately, get the value for this field from the **consumerAuthenticationInformation.networkScore** response field.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.networkScore
- SCMP API Field: pa_network_score
- Simple Order API Field: ccAuthService_paNetworkScore

consumer Authentication Information. override Payment Method

Specifies the payment account type used for the transaction.

This field overrides other payment types that might be specified in the request. Use one of the following values for this field:

- NA: Not applicable. Do not override other payment types that are specified in the request.
- CR: Credit card
- DB: Debit card
- VSAVR: Visa Vale Refeicao
- VSAVA: Visa Vale Alimentacao

Specifications

- Field Type: Request
- Data Type:String
- Data Length: 10

- REST API Field: consumerAuthenticationInformation.overridePaymentMethod
- SCMP API Field: pa_override_payment_method

 $\bullet \ Simple \ Order \ API \ Field: payer Auth Enroll Service_override Payment Method$

consumer Authentication Information. pares Status

Payer authentication response status.

This field is supported only on the following processors:

- Asia, Middle East, and Africa Gateway for Mastercard Identity Check and Visa Secure transactions.
- Atos for Mastercard Identity Check and Visa Secure transactions.
- Credit Mutuel-CIC for Cartes Bancaires Fast'R and Mastercard Identity Check transactions.
- Ingenico ePayments for:
 - Mastercard Identity Check transactions when a third-party provider authenticates the transaction.
 - Visa Secure transactions when a third-party provider authenticates the transaction.

When you request the payer authentication and authorization services separately, get the value for this field from the **consumerAuthenticationInformation.paresStatus** response field.

Possible values:

- Y: Customer was successfully authenticated.
- A: Authentication was attempted.
- N: Customer failed or canceled authentication. Transaction denied.
- U: Authentication was not completed. The reason is unknown.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

Mapping Information

• REST API Field: consumerAuthenticationInformation.paresStatus

• SCMP API Field: pares_status

• Simple Order API Field: ccAuthService_paresStatus

consumer Authentication Information. pa Specification Version

3D Secure version that was used to process the transaction.

Example: 1.0.2

Example: 2.0.0

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR7

• Position: 113

• Field: MC AVV Verification—Program Protocol

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 20

- $\bullet \ REST\ API\ Field: consumer Authentication Information. pa Specification Version$
- SCMP API Field: pa_specification_version
- $\bullet \ Simple \ Order \ API \ Field: ccAuth Service_pa Specification Version$

consumer Authentication Information. prior Authentication Data

This field contains data that the ACS can use to verify the authentication process.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2048

- $\bullet \ REST\ API\ Field: consumer Authentication Information. prior Authentication Data$
- SCMP API Field: pa_prior_authentication_data
- Simple Order API Field: payerAuthEnrollService_priorAuthenticationData

consumer Authentication Information. prior Authentication Method

Method the cardholder used previously to authenticate to the 3D Secure requester.

Possible values:

- 01: Frictionless authentication occurred by ACS
- 02: Cardholder challenge occurred by ACS
- 03: AVS verified
- 04: Other issuer methods
- 05-79: Reserved for EMVCo future use (values invalid until defined by EMVCo)
- 80-99: Reserved for directory server use

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.priorAuthenticationMethod
- SCMP API Field: pa_prior_authentication_method

 $\bullet \ Simple \ Order \ API \ Field: payer Auth Enroll Service_prior Authentication Method$

consumer Authentication Information. prior Authentication Reference Id

This field contains the ACS transaction ID for a prior authenticated transaction.

For example, the first recurring transaction that was authenticated with the cardholder.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 36

- $\bullet \ REST\ API\ Field: consumer Authentication Information. prior Authentication Reference Id$
- SCMP API Field: pa_prior_authentication_reference_id
- Simple Order API Field: payerAuthEnrollService_priorAuthenticationReferenceID

consumer Authentication Information. prior Authentication Time

Date and time in UTC of the prior cardholder authentication.

Format: YYYYMMDDHHMM

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 12

- $\bullet \ REST\ API\ Field: consumer Authentication Information. prior Authentication Time$
- SCMP API Field: pa_prior_authentication_time
- Simple Order API Field: payerAuthEnrollService_priorAuthenticationTime

consumer Authentication Information. product Code

Specifies the product code, which designates the type of transaction.

Specify one of the following values for this field:

- AIR: Airline purchase
- ACC: Accommodation Rental
- ACF: Account funding
- CHA: Check acceptance
- DIG: Digital Goods
- DSP: Cash Dispensing
- GAS: Fuel
- GEN: General Retail
- LUX: Luxury Retail
- PAL: Prepaid activation and load
- PHY: Goods or services purchase
- QCT: Quasi-cash transaction
- REN: Car Rental
- RES: Restaurant
- SVC: Services

- TBD: Other
- TRA: Travel

Specifications

• Request: Required

• Data Type: String

• Data Length: 3

- $\bullet \ REST\ API\ Field: consumer Authentication Information. product Code$
- SCMP API Field: pa_product_code
- Simple Order API Field: payerAuthEnrollService_productCode

consumerAuthenticationInformation.referenceId

Reference ID that corresponds to the device fingerprinting data that was collected previously.

Specifications

• Field Type: Request

• Data Type: String

• Data Length:50

Mapping Information

• REST API Field: consumerAuthenticationInformation.referenceId

• SCMP API Field: pa_reference_id

• Simple Order API Field: payerAuthEnrollService_referenceID

consumer Authentication Information. requestor Initiated Authentication Indicator

Indicates the type of 3RI request (3D Secure Integrator Request).

Possible Values:

- **01**: Recurring transaction
- 02: Installment transaction
- 03: Add card
- 04: Maintain card
- 05: Account verification
- 06: Split/delayed shipment
- 07: Top-up
- 08: Mail Order
- 09: Telephone Order
- 10: Whitelist status check
- 11: Other payment

EMV 3D Secure version 2.1.0 supports values 01-05. Version 2.2.0 supports values 01-11.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- $\bullet \ REST\ API\ Field: consumer Authentication Information. requestor Initiated Authentication Indicator$
- SCMP API Field: pa_requestor_initiated_authentication_indicator
- Simple Order API Field: payerAuthEnrollService_requestorInitiatedAuthenticationIndicator

consumer Authentication Information. response Access Token

JSON Web Token (JWT) returned by the 3D Secure provider when the authentication is complete.

Specifications

• Request: Required

• Data Type: String

• Data Length: 2048

Mapping Information

 $\bullet \ REST\ API\ Field: consumer Authentication Information. response Access Token$

• SCMP API Field: pa_response_access_token

• Simple Order API Field: payerAuthValidateService_responseAccessToken

pa_return_url-main

URL of your return page.

This return URL is added to the step-up JWT and returned in the response of the Payer Authentication enrollment call. Your return URL page serves as a listening URL. Cardinal sends a POST response to your return URL when the bank session completes that contains the completed bank session's transaction ID. Your return page should capture the transaction ID and send it in the Payer Authentication validation call.

Specifications

- Field Type: Request
- Data Type:String
- Data Length:2048

- REST API Field: consumerAuthenticationInformation.returnUrl
- SCMP API Field: pa_return_url
- Simple Order API Field: payerAuthEnrollService_returnURL

consumer Authentication Information. sdk Max Timeout

This field indicates the maximum amount of time for all 3D Secure 2.x messages to be communicated between all components (in minutes).

Possible Values:

- Greater than or equal to 05 (05 is the minimum timeout to set)
- Default is set to 15

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.sdkMaxTimeout
- SCMP API Field: pa_sdk_max_timeout
- Simple Order API Field: payerAuthEnrollService_sdkMaxTimeout

consumer Authentication Information. signed Pares

Payer authentication result (PARes) message returned by the card-issuing bank.

If you need to show proof of enrollment checking, you may need to decrypt and parse the string for the information required by the payment card company.

[] Important: The value is in Base64. You must remove all carriage returns and line feeds before adding the PARes to the request.

Specifications

• Field Type: Request

• Data Type: String

- REST API Field: consumerAuthenticationInformation.signedPares
- SCMP API Field: pa_signedpares
- Simple Order API Field: payerAuthValidateService_signedPARes

consumer Authentication Information. signed Pares Status Reason

Reason for payer authentication response status.

This field is supported only for Cartes Bancaires Fast'R transactions on Credit Mutuel-CIC.

Possible values:

- 01: Card authentication failed.
- 02: Unknown device. Example: Device fingerprint not recognised because the device is an old mobile phone.
- 03: Unsupported device.
- 04: Exceeds authentication frequency limit. Strong customer authentication is required every six transactions or when the cumulative amount for the payment card during the preceding week exceeds 100 EUR.
- 05: Expired card.
- 06: Invalid card number.
- 07: Invalid transaction.
- 08: No card record. The card was not found in the 3D Secure server database.
- 09: Security failure as determined by 3D Secure server.
- 10: Stolen card.
- 11: Suspected fraud.
- 12: Cardholder is not permitted to perform this transaction.
- 13: Cardholder is not enrolled in 3D Secure service.

- 14: Transaction timed out at the access control server (ACS), which is a server on the issuer side of the 3D Secure protocol.
- 15: Low confidence as determined by 3D Secure server.
- 16: Medium confidence.
- 17: High confidence.
- 18: Very high confidence.
- 19: Exceeds the maximum number of challenges permitted by the ACS.
- 20: Non-payment transaction is not supported.
- 21: 3D Secure request for information, such as BIN lookup, is not supported.
- 22: ACS technical problem.
- 23: Decoupled authentication is required by the ACS but you did not request it.
- 24: Your maximum expiration time was exceeded.
- 25: There was not enough time for decoupled authentication to authenticate the cardholder.
- 26: Authentication was attempted but the cardholder was not authenticated.

When you request the payer authentication and authorization services separately, get the value for this field from the **consumerAuthenticationInformation.signedParesStatusReason** response field.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

- $\bullet \ REST\ API\ Field: consumer Authentication Information. signed Pares Status Reason$
- SCMP API Field: pares_status_reason
- Simple Order API Field: ccAuthService_paresStatusReason

consumer Authentication Information. strong Authentication. delegated Authentication Exemption Indicator and the strong Authentication and the strong Auth

Exemption indicator for delegated authentication.

This flag specifies whether the transaction is exempt from strong customer authentication (SCA) requirements in Europe because the authentication was delegated to a different provider, such as an acquirer or payment technology provider (PTP).

Possible values:

- Ø (default): Not exempt.
- 1: Exempt from SCA requirements because the authentication was delegated to a different provider

Visa Platform Connect

For Mastercard transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 145-146

• Field: Mastercard Low-Risk Merchant Indicator

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: consumer Authentication Information. strong Authentication. delegated Authentication Exemption Indicator$
- SCMP API Field: delegated_authentication_exemption_indicator
- Simple Order API Field: ccAuthService_delegatedAuthenticationExemptionIndicator

consumer Authentication Information. strong Authentication. is suer Information. trusted Merchant Exemption Result and the support of the property of the pr

Code that indicates whether the issuer honored or denied the customer's request for trusted merchant exemption.

This field is supported only on Visa Platform Connect.

Possible values:

- 1: Trusted merchant exemption validated.
- 2: Trusted merchant exemption failed validation.

consumer Authentication Information. strong Authentication. is suer Information. risk Analysis Exemption Result (a) and the consumer Authentication (b) and the consumer Authentication (c) and the consumer (c) and the consumer

Reason that the issuer declined your request for a strong customer authentication exemption.

This field is supported only on Visa Platform Connect.

This value is a series of a maximum of 20 four-digit codes and no delimiters. Possible codes:

- 8401: You are not participating in the Visa Trusted Listing program.
- 8402: Issuer is not participating in the Visa Trusted Listing program.
- 8403: Your business is not included on the cardholder's list of trusted merchants.
- 8404: Issuer response is unclear or invalid.
- 8473: Your business is not included on the cardholder's list of trusted merchants.
- 8474: Transaction information does not meet the exemption criteria.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR9

• Position: 61-140

• Field: Reasons for Not Honoring SCA Exemptions

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 80

- $\bullet \ REST\ API\ Field: consumer Authentication Information. strong Authentication. is suer Information. risk Analysis Exemption Result$
- SCMP API Field: issuer_risk_analysis_exemption_result
- Simple Order API Field: issuer_riskAnalysisExemptionResult
- Secure Acceptance API Field: No corresponding field.

consumer Authentication Information. strong Authentication. low Value Exemption Indicator and the consumer Authentication Information Inform

Exemption indicator for a low payment amount.

This flag specifies whether the transaction is exempt from strong customer authentication (SCA) requirements in Europe because the payment amount is low.

Possible values:

- 0 (default): Not exempt.
- 1: Exempt from SCA requirements because the payment amount is low.

Visa Platform Connect

For Mastercard transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 145-146

• Field: Mastercard Low-Risk Merchant Indicator

For transactions with other card types, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 126

• Field: Low Value Exemption Indicator

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: consumer Authentication Information. strong Authentication. low Value Exemption Indicator$
- SCMP API Field: low_value_exemption_indicator
- $\bullet \ Simple \ Order \ API \ Fields: ccAuth Service_low Value Exemption Indicator$

$consumer Authentication Information. strong Authentication. Out age {\tt Exemption Indicator}$

Exemption indicator for payer authentication outage.

This flag specifies whether the transaction is exempt from strong customer authentication (SCA) requirements in Europe because payer authentication is not available.

Possible values:

- 0 (default): Not exempt.
- 1: Exempt from SCA requirements because payer authentication is not available.

This field is supported only on Visa Platform Connect.

For Mastercard transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 145-146

• Field: Mastercard Low-Risk Merchant Indicator

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: consumer Authentication Information. strong Authentication. Out age Exemption Indicator$
- SCMP API Field: authentication_outage_exemption_indicator
- $\bullet \ Simple \ Order \ API \ Field: ccAuth Service_authentication Outage Exemption Indicator$

consumer Authentication Information. strong Authentication. risk Analysis Exemption Indicator and the consumer and the consumer Authentication Information I

Exemption indicator for a low risk transaction.

This flag specifies whether the transaction is exempt from strong customer authentication (SCA) requirements in Europe because it is a low-risk transaction.

Low-risk transactions are described by the Payments Service Directive 2/Regulatory Technical Standards (PSD2/RTS) regulations.

Possible values:

- 0 (default): Not exempt.
- 1: Exempt from SCA requirements because the transaction is low risk.

Visa Platform Connect

To set the default for this field, contact customer support.

For Mastercard transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 145-146

• Field: Mastercard Low-Risk Merchant Indicator

For transactions with other card types, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 127

• Field: Transaction Risk Analysis Exemption Indicator

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

Mapping Information

 $\bullet \ REST\ API\ Field: consumer Authentication Information. strong Authentication. risk Analysis Exemption Indicator$

• SCMP API Field: risk_analysis_exemption_indicator

 $\bullet \ Simple \ Order \ API \ Field: ccAuth Service_risk Analysis Exemption Indicator$

consumer Authentication Information. strong Authentication. secure Corporate Payment Indicator and the consumer Authentication Information Infor

Exemption indicator for a secure corporate payment.

This flag specifies whether the transaction is exempt from strong customer authentication (SCA) requirements in Europe because the payment is a secure corporate payment. Indicates that dedicated payment processes and procedures were used.

Possible values:

- Ø (default): Not exempt.
- 1: Exempt from SCA requirements because the payment is a secure corporate payment.

Visa Platform Connect

For Mastercard transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 145-146

• Field: Mastercard Low-Risk Merchant Indicator

For transactions with other card types, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 129

• Field: Secure Corporate Payment Indicator

Specifications

• Data Type: String

• Dats Length: 1

- $\bullet \ REST\ API\ Field: consumer Authentication Information. strong Authentication. secure Corporate Payment Indicator$
- SCMP API Field: secure_corporate_payment_indicator
- Simple Order API Field:
 - ccAuthService_secureCorporatePaymentIndicator
 - $^{\circ}\ payer Auth Enroll Service_secure Corporate Payment Indicator$

consumer Authentication. strong Authentication. transaction Mode

Transaction mode identifier. Identifies the channel from which the transaction originates.

Possible values:

- M: MOTO (Mail Order Telephone Order)
- R: Retail
- **S**: eCommerce
- P: Mobile Device
- T: Tablet

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: consumerAuthentication.strongAuthentication.transactionMode
- SCMP API Field: pa_transaction_mode

 $\bullet \ Simple \ Order \ API \ Field: payer Auth Enroll Service_transaction Mode$

consumerAuthenticationInformation.ucafAuthenticationData

Universal cardholder authentication field (UCAF) data.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 126-157

• Field: Mastercard UCAF Data

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 32

- REST API Field: consumerAuthenticationInformation.ucafAuthenticationData
- SCMP API Field: ucaf_authentication_data

• Simple Order API Field: ucaf_authenticationData

consumerAuthenticationInformation.ucafCollectionIndicator

Universal cardholder authentication field (UCAF) collection indicator to which the transaction was downgraded.

Apple Pay and Samsung Pay: set the value of this field to 2.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file.

• Record: CP01 TCR7

• Position: 5

• Field: Mastercard Electronic Commerce Indicators—UCAF Collection Indicator

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

 $\bullet \ \mathbf{Data} \ \mathbf{Length:} \ 1$

Mapping Information

• REST API Field: consumerAuthenticationInformation.ucafCollectionIndicator

- SCMP API Field: ucaf_collection_indicator
- $\bullet \ Simple \ Order \ API \ Field: ucaf_collection Indicator$

consumerAuthenticationInformation.veresEnrolled

Verification response enrollment status.

This field is supported only on Asia, Middle East, and Africa Gateway.

When you request the payer authentication and authorization services separately, get the value for this field from the response field.

Possible values:

- Y: Authentication available.
- N: Customer not participating.
- U: Unable to authenticate regardless of the reason.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: consumerAuthenticationInformation.veresEnrolled
- SCMP API Field: veres_enrolled

 $\bullet \ Simple \ Order \ API \ Field: ccAuth Service_veres Enrolled$

consumer Authentication Information. strong Authentication. authentication Indicator

Indicates the type of authentication request.

Possible values:

- 01: Payment transaction
- 02: Recurring transaction
- 03: Installment transaction
- 04: Add card
- 05: Maintain card
- 06: Cardholder verification as part of EMV token ID&V (identity and verification)

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: consumerAuthenticationInformation.strongAuthentication.authenticationIndicator
- SCMP API Field: pa_authentication_indicator

 $\bullet \ Simple \ Order \ API \ Field: payer Auth Enroll Service_authentication Indicator$

consumer Authentication Information. alternate Authentication Date

Date and time in UTC of the cardholder authentication.

Format: YYYYMMDDHHMM

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 14

- REST API Field: consumerAuthenticationInformation.alternateAuthenticationDate
- SCMP API Field: pa_alternate_authentication_date
- Simple Order API Field: payerAuthEnrollService_alternateAuthenticationDate

creditAmountDetails.creditAmount

Amount that was credited.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: creditAmountDetails.creditAmount and refundAmountDetails.refundAmount

• SCMP API Field: credit_credit_amount

• Simple Order API Field: ccCreditReply_amount

creditAmountDetails.creditAmount

Amount that was credited to the cardholder's account.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: creditAmountDetails.creditAmount
- SCMP API Field: pin_debit_credit_auth_amount
- Simple Order API Field: pinDebitCreditReply_amount

creditAmountDetails.currency

Currency used for the order.

Use a three-character ISO currency code.

For an authorization reversal or capture, you must use the same currency that was used for the authorization.

DCC with a Third-Party Provider: Customer's billing currency.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

- REST API Fields:
 - · orderInformation.amountDetails.currency
 - $^{\circ}\ credit Amount Details. currency$
 - $^{\circ}\ refund Amount Details. currency$
 - reversalAmountDetails.currency
- SCMP API Field: currency

• Simple Order API Field: purchaseTotals_currency

currencyConversion.indicator

Flag indicating that DCC is being used for the transaction.

Set the value for this field to 1.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: currencyConversion.indicator
- SCMP API Field: dcc_indicator
- Simple Order API Field: dcc_dccIndicator

description

Optional description or label for the point-of-sale terminal.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 128

Mapping Information

• REST API Field: description

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

deviceExternalId

Identifier from the partner's system that is used to set up the point-of-sale (POS) terminal firmware, software, and configurations.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request and Response

• Data Type: String

• Data Length: 64

Mapping Information

• REST API Field: deviceExternalId

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

deviceInformation.hostName

DNS resolved hostname from **deviceInformation.ipAddress**.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 60

Mapping Information

• REST API Field: deviceInformation.hostName

• SCMP API Field: customer_hostname

• Simple Order API Field: billTo_hostname

deviceInformation.httpAcceptBrowserValue

Value of the Accept header sent by the customer's web browser.

[] Important: If the customer's browser provides a value, you must include it in your request.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 255

Mapping Information

• REST API Field: deviceInformation.httpAcceptBrowserValue

• SCMP API Field: pa_http_accept

• Simple Order API Field: payerAuthEnrollService_httpAccept

deviceInformation.httpAcceptContent

The exact content of the HTTP accept header.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 256

Mapping Information

• REST API Field: deviceInformation.httpAcceptContent

• SCMP API Field: pa_http_user_accept

• Simple Order API Field: payerAuthEnrollService_httpUserAccept

deviceInformation. http Browser Color Depth

Indicates the bit depth of the color palette for displaying images, in bits per pixel.

Example 24

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: deviceInformation.httpBrowserColorDepth
- SCMP API Field: http_browser_color_depth
- Simple Order API Field: billTo_httpBrowserColorDepth

deviceInformation. http Browser Java Enabled

Indicates the ability of the cardholder browser to execute Java.

The value is returned from the navigator.javaEnabled property. This field can contain one of these values:

- true
- false

Specifications

• Field Type: Request

• Data Type: Boolean

- REST API Field: deviceInformation.httpBrowserJavaEnabled
- SCMP API Field: http_browser_java_enabled
- Simple Order API Field: billTo_httpBrowserJavaEnabled

deviceInformation. http Browser Java Script Enabled

Indicates the ability of the cardholder browser to execute JavaScript.

This value is available from the fingerprint details of the cardholder's browser. This field can contain one of these values:

- true
- false

Specifications

• Field Type: Request

• Data Type: Boolean

- REST API Field: deviceInformation.httpBrowserJavaScriptEnabled
- SCMP API Field: http_browser_javascript_enabled
- Simple Order API Field: billTo_httpBrowserJavaScriptEnabled

deviceInformation.httpBrowserLanguage

Indicates the browser language as defined in IETF BCP47.

Example en-US

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 8

- REST API Field: deviceInformation.httpBrowserLanguage
- SCMP API Field: http_browser_language
- Simple Order API Field: billTo_httpBrowserLanguage

deviceInformation.httpBrowserScreenHeight

Total height of the cardholder's screen in pixels.

Example 864

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 6

- REST API Field: deviceInformation.httpBrowserScreenHeight
- SCMP API Field: http_browser_screen_height
- Simple Order API Field: billTo_httpBrowserScreenHeight

deviceInformation. http Browser Screen Width

Total width of the cardholder's screen in pixels.

Example 1536

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 6

- REST API Field: deviceInformation.httpBrowserScreenWidth
- SCMP API Field: http_browser_screen_width
- Simple Order API Field: billTo_httpBrowserScreenWidth

device Information. http Browser Time Difference

Time difference between UTC time and the cardholder browser local time, in minutes.

Example 300

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 5

- REST API Field: deviceInformation.httpBrowserTimeDifference
- SCMP API Field: http_browser_time_difference
- Simple Order API Field: billTo_httpBrowserTimeDifference

device Information. ip Address

Customer's IP address.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 45

- REST API Field: deviceInformation.ipAddress
- SCMP API Field: customer_ipaddress
- Simple Order API Field: billTo_ipAddress

deviceInformation.userAgent

Customer's browser as identified from the HTTP header data.

Example:

Mozilla is the value that identifies the Netscape browser.

Chrome is the value that identifies the Google Chrome browser.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 40

Mapping Information

• REST API Field: deviceInformation.userAgent

• SCMP API Field: http_browser_type

• Simple Order API Field: billTo_httpBrowserType

device Information. user Agent Browser Value

Value of the User-Agent header sent by the customer's web browser.

(1) Important: If the customer's browser provides a value, you must include it in your request.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 255

Mapping Information

• REST API Field: deviceInformation.userAgentBrowserValue

• SCMP API Field: pa_http_user_agent

• Simple Order API Field: payerAuthEnrollService_httpUserAgent

encrypted_payment_descriptor

Format of the encrypted payment data.

Values:

• Apple Pay: Rk1EPUNPTU1PTi5BUFBMRS5JTkFQUC5QQV1NRU5U

• Blue PCI P2PE: Ymx1ZWZpbg==

• Samsung Pay: Rklepunptu1pti5tQu1tVu5HLkl0 QVBQLlBBWu1ftlQ=

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 128

Mapping Information

 $\bullet \ REST \ API \ Field: payment Information. fluid Data. descriptor$

• SCMP API Field: encrypted_payment_descriptor

• Simple Order API Field: encryptedPayment_descriptor

firmwareVersion

Version of firmware or operating system on the terminal.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 64

Mapping Information

• REST API Field: firmwareVersion

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

hardwareRevision

Revison number of terminal hardware.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 64

Mapping Information

• REST API Field: hardwareRevision

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

healthCareInformation.amountDetails.amount

Amount of the healthcare payment.

Send this field with a corresponding **healthCareInformation.amountDetails.amountType** field.

Example:

```
"healthCareInformation":{
    "amountDetails":[{
        "amountType":"vision",
        "amount":"60.00"
},
```

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 13

- REST API Field: healthCareInformation.amountDetails.amount
- SCMP API Field: health_care_#_amount
- Simple Order API Field: healthCare#_amount

health Care Information. amount Details. amount Type

Type of healthcare payment.

Mastercard possible values:

- eligible-total: total amount of healthcare.
- prescription

Visa possible values:

- clinic
- dental
- healthcare: total amount of healthcare.
- healthcare-transit
- prescription
- vision

Send this field with a corresponding **healthCareInformation.amountDetails.amount** field.

Example:

```
"healthCareInformation":{
    "amountDetails":[{
        "amountType":"vision",
        "amount":"60.00"
```

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 35

Mapping Information

• REST API Field: healthCareInformation.amountDetails.amountType

• SCMP API Field: health_care_#_amount_type

• Simple Order API Field: healthCare#_amountType

id

Identifier that is globally unique for the point-of-sale terminal.

The identifier must belong to an existing database of terminals.

Use a PATCH request to update the resource for the terminal.

Specifications

• Field Type: Request and Response

• Data Type: String

• Data Length: 36

Mapping Information

• REST API Field: id

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

Information.feeProgramIndicator

Interchange reimbursement fee program indicator (FPI), which is used when assessing the fee applied to a cross-border or domestic Asia Pacific financial transaction.

Acquirers and issues retain and return the FPI value in chargeback and representments.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 3

- REST API Field:Information.feeProgramIndicator
- SCMP API Field: fee_program_indicator
- Simple Order API Field: feeProgramIndicator

installmentInformation.totalAmount

Total amount of the loan that is being paid in installments.

This field is returned only for installment payments with Mastercard on Visa Platform Connect in all countries except Croatia, Georgia, and Greece.

Brazil

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 8-19

• Field: Installment Total Amount

Other Countries

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 5-16

• Field: Installment Payment Total Amount

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 12

- REST API Field: installmentInformation.totalAmount
- SCMP API Field: auth_installment_total_amount
- Simple Order API Field: installment_totalAmount

installmentInformation.additionalCosts

Additional costs charged by the issuer to fund the installment payments.

This field is returned only for two kinds of installment payments in Brazil on Visa Platform Connect:

- Crediario with Visa: this field is included in the authorization response for the Crediario eligibility request when the issuer approves the customer's request for Crediario installment payments.
- Mastercard.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 128-139

• Field: Total Other Costs

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 12

- REST API Field: installmentInformation.additionalCosts
- SCMP API Field: auth_installment_additional_costs

• Simple Order API Field: installment_additionalCosts

installmentInformation.additionalCosts

Additional costs charged by the issuer to fund the installment payments.

This field is supported only for Crediario installment payments in Brazil on Visa Platform Connect.

Obtain the value for this field from the authorization response for a Crediario eligibility request.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 128-139

• Field: Total Other Costs

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 12

Mapping Information

• REST API Field: installmentInformation.additionalCosts

• SCMP API Field: installment_additional_costs

• Simple Order API Field: installment_additionalCosts

in stall ment Information. additional Costs Percentage

Additional costs divided by the amount funded.

This field is returned only for two kinds of installment payments in Brazil on Visa Platform Connect:

- Crediario with Visa: this field is included in the authorization response for a Crediario eligibility request when the issuer approves the customer's request for Crediario installment payments.
- Mastercard.

Example A value of 1.0 specifies 1%.

Example A value of 4.0 specifies 4%.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 140-143

• Field: Percent of Total Other Costs

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

- $\bullet \ REST\ API\ Field: in stallment Information. additional Costs Percentage$
- $\bullet \, SCMP \, API \, Field: auth_installment_additional_costs_percentage$
- Simple Order API Field: installment_additionalCostsPercentage

in stall ment Information. additional Costs Percentage

Additional costs divided by the amount funded.

This field is supported only for Crediario installment payments in Brazil on Visa Platform Connect.

Example A value of 1.0 specifies 1%.

Example A value of 4.0 specifies 4%.

Obtain the value for this field from the authorization response for a Crediario eligibility request.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 140-143

• Field: Percent of Total Other Costs

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 4

Mapping Information

• REST API Field: installmentInformation.additionalCostsPercentage

- SCMP API Field: installment_additional_costs_percentage
- $\bullet \ Simple \ Order \ API \ Field: in stallment_additional Costs Percentage$

installmentInformation.amount

Amount of the current installment payment.

This field is returned only for Mastercard installment payments on Visa Platform Connect in all countries except Croatia and Georgia.

Brazil

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 26-37

• Field: Amount of Each Installment

Greece

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 23-34

• Field: Amount of Each Installment

Other Countries

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 63-74

• Field: Mastercard Subsequent Installment Amount

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 12

Mapping Information

• REST API Field: installmentInformation.amount

• SCMP API Field: auth_installment_amount

• Simple Order API Field: installment_amount

installmentInformation.amount

Amount for the current installment payment.

This field is supported only on Visa Platform Connect.

Argentina

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 26-37

• Field: Installment Amount

Brazil

In Brazil, this field is supported only for Crediario installment payments.

When you do not include this field in a request for a Crediario installment payment, a value of 0 is sent to the processor.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 26-37

• Field: Amount of Each Installment

Chile

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 24-35

• Field: Installment Amount

Georgia (Sakartvelo)

In Georgia, this field is supported only for installment payments.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 63-74

• Mastercard Subsequent Installment Amount

Specifications

• Field Type: Request

• Data Type: String

• Length:12

Mapping Information

• REST API Field: installmentInformation.amount

• SCMP API Field: installment_amount

• Simple Order API Field: installment_amount

installmentInformation.amountFunded

Amount funded.

This field is returned only for two kinds of installment payments in Brazil on Visa Platform Connect:

- Crediario with Visa: this field is included in the authorization response for the Crediario eligibility request when the issuer approves the customer's request for Crediario installment payments.
- Mastercard.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 48-59

• Field: Total Amount Funded

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 12

- REST API Field: installmentInformation.amountFunded
- SCMP API Field: auth_installment_amount_funded

• Simple Order API Field: installment_amountFunded

installmentInformation.amountFunded

Amount funded.

This field is supported only for Crediario installment payments in Brazil on Visa Platform Connect.

Obtain the value for this field from the authorization response for a Crediario eligibility request.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 48-59 Field: Total Amount Funded

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 12

Mapping Information

• REST API Field: installmentInformation.amountFunded

• SCMP API Field: installment_amount_funded

• Simple Order API Field: installment_amountFunded

installmentInformation.amountRequestedPercentage

Amount requested divided by the amount funded.

This field is returned only for two kinds of installment payments in Brazil on Visa Platform Connect:

- Crediario with Visa: this field is included in the authorization response for the Crediario eligibility request when the issuer approves the customer's request for Crediario installment payments.
- Mastercard.

Example: A value of 90.0 specifies 90%.

Example: A value of 93.7 specifies 93.7%.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 60-63

• Field: Percent of Amount Requested

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

- $\bullet \ REST \ API \ Field: in stall ment Information. amount Requested Percentage$

installmentInformation.firstInstallmentAmount

Amount of the first installment payment.

This field is returned only for Mastercard installment payments on Visa Platform Connect in all countries except Brazil, Croatia, Georgia, and Greece.

The issuer provides this value when the first installment payment is successful.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 23-34

• Field: Amount of Each Installment

Specifications

- REST API Field: installmentInformation.firstInstallmentAmount
- SCMP API Field: auth_installment_first_installment_amount
- Simple Order API Field: installment_firstInstallmentAmount

installmentInformation.firstInstallmentAmount

Amount of the first installment payment.

This field is supported only for Mastercard installment payments in Georgia (Sakartvelo) on Visa Platform Connect.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 23-34

• Field: Amount of Each Installment

Specifications

• Field Type: Request

• Data Length: 12

- REST API Field: installmentInformation.firstInstallmentAmount
- SCMP API Field: installment_first_installment_amount
- Simple Order API Field: installment_firstInstallmentAmount

installmentInformation.firstInstallmentDate

Date of the first installment payment.

This field is returned only for Mastercard installment payments on Visa Platform Connect in Greece.

Format: YYMMDD

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 102-107

• Field: Mastercard Greece First Installment Due Date

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 6

- REST API Field: installmentInformation.firstInstallmentDate
- SCMP API Field: auth_installment_first_installment_date

 $\bullet \ Simple \ Order \ API \ Field: installment_firstInstallment Date$

installmentInformation.firstInstallmentDate

Date of the first installment payment.

This field is supported only on Visa Platform Connect.

When you do not include this field, a string of six zeros (000000) is sent to the processor.

In Argentina, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 38-43

• Field: Consumer Deferred Sale

For Crediario installment payments in Brazil, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 42-47

• Field: Date of First Installment

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 6

• Format: YYMMDD

- REST API Field: installmentInformation.firstInstallmentDate
- SCMP API Field: installment_first_installment_date
- Simple Order API Field: installment_firstInstallmentDate

installmentInformation.frequency

Frequency of the installment payments.

This field is supported only on Visa Platform Connect.

When you do not include this field in a request for a Credario installment payment, a space character is sent to the processor.

Possible values:

- B: Biweekly.
- M: Monthly.
- W: Weekly.

For Credario installment payments, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 41

• Field: Installment Frequency

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: installmentInformation.frequency
- SCMP API Field: installment_frequency
- Simple Order API Field: installment_frequency

installmentInformation.gracePeriodDuration

Grace period requested by the customer before the first installment payment is due.

This field is supported only on Prosa and Visa Platform Connect.

Prosa

Length of grace period in months.

Valid values: 00 through 99.

When the value for the installment plan type field is 07, the installment grace period duration must be greater than 00.

Visa Platform Connect

This field is supported only for Mastercard installment payments in Brazil and Greece.

When you include this field in a request, you must also include the grace period duration type field.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 100-101

• Field: Mastercard Grace Period Details

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- $\bullet \ REST \ API \ Field: in stallment Information. grace Period Duration$

- $\bullet \ Simple \ Order \ API \ Field: installment_planID$

installmentInformation.planType

Type of installment plan.

This field is supported only on American Express Direct, Cielo, Cybersource Latin American Processing, Prosa, and Visa Platform Connect.

American Express Direct, Cielo, and Cybersource Latin American Processing

Possible values:

- 1: Merchant-funded installment plan.
- 2: Issuer-funded installment plan.

When you do not include this field in the request, the value in your account is used. To change the value in your account, contact customer service.

Cybersource Latin American Processing is the name of a specific processing connection. *Cybersource Latin American Processing* does not refer to the general topic of processing in Latin America. The information in this field description, or in this section of the field description, is for the specific processing connection called *Cybersource Latin American Processing*. It is not for any other Latin American processors.

Prosa

Possible values:

- 00: Not a promotion.
- 03: Interest is not charged to the customer.
- 05: Interest is charged to the customer.
- 07: Skip payment: buy now and pay the full amount later in one payment.

Visa Platform Connect with American Express

American Express-defined code that specifies the type of installment plan. Contact American Express for:

- Information about the kinds of installment plans that American Express provides.
- Values for this field.

For installment payments with American Express in Brazil, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR3

• Position: 5-6

• Field: Plan Type

Visa Platform Connect with Visa or Mastercard

Possible values:

- 1 or 01: Merchant-funded installment plan.
- 2 or 02: Issuer-funded installment plan.
- 3 or 03: Co-branded merchant financed—only with Mastercard in Brazil.
- 4 or 04: Issuer merchant co-financed—only with Mastercard in Brazil.
- 43: Crediario installment plan—only with Visa in Brazil.
- 7 or 07: Merchant-funded government plan—only with Visa in Argentina.

For installment payments in Argentina, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 22-23

• Field: Installment Type

For installment payments in Chile, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 23

• Field: Installment Type

For installment payments with Visa in Brazil, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR1

• Position: 5-6

• Field: Installment Type

For all other kinds of installment payments, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 39-40

• Field: Installment Plan Type

Specifications

Prosa and Visa Platform Connect:

• Field Type: Request

• Field: Total Taxes

Specifications

• Field Type: Request

• Type: String

• **Length**: 12

Mapping Information

• REST API Field: installmentInformation.taxes

• SCMP API Field: installment_taxes

• Simple Order API Field: installment_taxes

installmentInformation.taxesPercentage

Taxes divided by the amount funded.

This field is returned only for two kinds of installment payments in Brazil on Visa Platform Connect:

- Crediario with Visa: this field is included in the authorization response for the Crediario eligibility request when the issuer approves the customer's request for Crediario installment payments.
- Mastercard.

Example: A value of 1.0 specifies 1%.

Example: A value of 4.0 specifies 4%.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 108-111

• Field: Percent of Total Taxes

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

- $\bullet \ REST \ API \ Field: in stall ment Information. taxes Percentage$
- $\bullet \, SCMP \, API \, Field: auth_installment_taxes_percentage$
- Simple Order API Field: installment_taxesPercentage

installmentInformation.taxesPercentage

Taxes divided by the amount funded.

This field is supported only for Crediario installment payments in Brazil on Visa Platform Connect.

Example A value of 1.0 specifies 1%.

Example A value of 4.0 specifies 4%.

This field is included in the authorization response for a Crediario eligibility request when the issuer approves the customer's request for Crediario installment payments in Brazil.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 108-111

• Field: Percent of Total Taxes

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 4

Mapping Information

• REST API Field: installmentInformation.taxesPercentage

- SCMP API Field: installment_taxes_percentage
- Simple Order API Field: installment_taxesPercentage

installmentInformation.totalAmount

Total amount of the loan that is being paid in installments.

This field is supported only on Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 12

- REST API Field: installmentInformation.totalAmount
- SCMP API Field: installment_total_amount
- Simple Order API Field: installment_totalAmount

installmentInformation.totalCount

Total number of installments.

This field is returned only for installment payments with Mastercard on Visa Platform Connect in all countries except Brazil, Croatia, Georgia, and Greece.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 20-22

• Field: Number Of Installments

Specifications

• Field Type: Response

• Data Type: Integer

• Data Length: 2

Mapping Information

• REST API Field: installmentInformation.totalCount

• SCMP API Field: auth_installment_total_count

• Simple Order API Field: installment_totalCount

installmentInformation.totalCount

Total number of installment payments.

This field is used along with **installmentInformation.sequence** to track which payment is being processed.

Example: These are the values for the second of five payments:

installmentInformation.sequence=2
installmentInformation.totalCount=5

American Express Direct, Cielo, and Credit Mutuel-CIC

This value is the total number of installments that you approved.

Cybersource Latin American Processing in Brazil

This value is the total number of installments that you approved. The default is 1.

Cybersource Latin American Processing is the name of a specific processing connection. *Cybersource Latin American Processing* does not refer to the general topic of processing in Latin America. The information in this field description, or in this section of the field description, is for the specific processing connection called *Cybersource Latin American Processing*. It is not for any other Latin American processors.

Prosa

Valid values: 00 through 99.

When the value for the installment plan type field is 07, the installment total count is set to 00.

Visa Platform Connect in Argentina

Valid values with Mastercard: 02 through 99.

Valid values with Visa: 00 through 99.

• Record: CP01 TCR9

• Position: 24-25

• Field: Number of Installments

Visa Platform Connect in Brazil

For Mastercard installments and for Crediario installment payments with Visa, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 23-25

• Field: Number of Installments

Visa Platform Connect in Chile

Valid values: 02 through 48.

• Record: CP01 TCR9

• Position: 20-22

• Field: Number of Installments

Visa Platform Connect in All Countries Except Argentina, Brazil, and Chile

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 20-22

• Field: Number of Installments

For installment payments with American Express or with Visa, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR3

• Position: 7-8

• Field: Number of Installments

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

Mapping Information

• REST API Field: installmentInformation.totalCount

• SCMP API Field: installment_total_count

• Simple Order API Field: installment_totalCount

installmentInformation.annualInterestRate

Annual interest rate.

This field is returned only for two kinds of installment payments on Visa Platform Connect:

- Crediario with Visa in Brazil: this field is included in the authorization response for the Crediario eligibility request when the issuer approves the customer's request for Crediario installment payments.
- Mastercard in all countries except Brazil, Croatia, Georgia, and Greece.

Example: A value of 1.0 specifies 1%.

Example: A value of 4.0 specifies 4%.

Brazil

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 151-157

• Field: Annual Interest Rate

Other Countries

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR5

• Position: 58-62

• Field: Mastercard Annual Percentage Rate

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 7

Mapping Information

• REST API Field: installmentInformation.annualInterestRate

• SCMP API Field: auth_installment_annual_interest_rate

• Simple Order API Field: installment_annualInterestRate

issuerInformation.country

Country in which the card was issued.

This field is returned only for Visa, Mastercard, Discover, Diners Club, JCB, and Maestro (International) on Chase Paymentech Solutions.

This information enables you to determine whether the card was issued domestically or internationally.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 3

Mapping Information

• REST Field: issuerInformation.country

• SCMP API Field: auth_card_issuer_country

• Simple Order API Field: ccAuthReply_cardIssuerCountry

is suer Information. discretionary Data

Data defined by the issuer.

This field is supported only for Visa and Mastercard on Visa Platform Connect.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP08 TCR1

• Position: 9-168

• Field: Free Form Text

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 255

(I) Important: For an authorization, the maximum length for this value is 255 characters. In the capture file, the value is truncated at 161 characters.

- $\bullet \ REST \ API \ Field: is suer Information. discretionary Data \ and \ processing Information. is suer. discretionary Data$
- SCMP API Field: issuer_additional_data

• Simple Order API Field: issuer_additionalData

issuerInformation.responseCode

Additional authorization code that must be printed on the receipt when returned by the processor.

This value is generated by the processor and is returned only for a successful transaction.

Processors supported for card-present transactions:

- FDC Nashville Global
- SIX

Processor supported for card-not-present transactions:

• HSBC

Specifications

• Field Type: Response

• Data Type: Integer

• Data Length: 6

- REST API Field: issuerInformation.responseCode
- SCMP API Field: issuer_response_code

• Simple Order API Field: issuer_responseCode

issuerInformation.verificationType

Type of customer verification data you are requesting.

This field is supported only for Mastercard installment payments in Poland on Visa Platform Connect.

After receiving the authorization request, the issuer sends you the type of data you requested by means of a communication method or network that does not include Visa Platform Connect. Use the data to verify the customer's identity.

Possible values:

• 01: Customer's personal data.

• 02: Customer's age.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: issuerInformation.verificationType

• SCMP API Field: auth_verification_type

• Simple Order API Field: ccAuthService_verificationType

make

Manufacturer of the point-of-sale (POS) terminal.

When sending a request, you must send either the **partName** field or both the **make** and **model** fields.

Valid values:

- Ingenico
- PAX
- Verifone

Specifications

• Field Type: Request

• Data Type: String

• Data Length: Pre-defined values

Mapping Information

• REST API Field: make

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

merchantld

Your merchant ID. Use the same merchant ID for evaluation, testing, and production.

The value for the **merchantId** field is passed either in the HTTP header or in the HTTP request body. The sender of the **merchantId** value determines whether this value is sent in the HTTP header or in the HTTP request body.

For payment processing, the sender is a merchant. The merchant ID value is passed in the HTTP header field **v-c-merchant-id**.

For terminal management, the sender is a payment technology provider. The merchant ID value is passed in the HTTP request body in the **merchantId** field.

Specifications

• Field Type: Request and Response (terminal management only)

• Data Type: String

• Data Length: 30

Mapping Information

• REST API Field:

• For payment processing: The merchant ID value is passed in the HTTP header **v-c-merchant-id**.

• For terminal management: merchantId

• SCMP API Field: merchant_id

Simple Order API Field: merchantID

merchantDefinedInformation[].key

The number you assign as the key for your merchant-defined data field.

This topic describes the sequence of fields from merchantDefinedInformation[0].key through merchantDefinedInformation[100].key.

[] Important: When you include this field in a request, you must also include the corresponding merchantDefinedInformation[].value field, which contains the value that corresponds to the merchantDefinedInformation[].key field.

Marning: Merchant-defined data fields are not intended to and must not be used to capture personally identifying information. Accordingly, merchants are prohibited from capturing, obtaining, and/or transmitting any personally identifying information in or via the merchant-defined data fields. Personally identifying information includes, but is not limited to, address, payment card number, social security number, driver's license number, state-issued identification number, passport number, and card verification numbers (CVV, CVC2, CVV2, CID, CVN). In the event Cybersource discovers that a merchant is capturing and/or transmitting personally identifying information via the merchant-defined data fields, whether or not intentionally, Cybersource will immediately suspend the merchant's account, which will result in a rejection of any and all transaction requests submitted by the merchant after the point of suspension.

Payer Authentication

Only fields 1 through 5 are supported in Payer Authentication. The value appears in the Case Management Details window in the Business Center. The first four fields are the same fields that are used by the Secure Data services.

Visa Platform Connect

For installment payments with Mastercard in Brazil, use **merchantDefinedInformation[0].key** and **merchantDefinedData_mddField_2merchantDefinedInformation[1].key** for data that you want to provide to the issuer to identify the transaction.

For installment payments with Mastercard in Brazil:

- The value for **merchantDefinedInformation[0].key** corresponds to the following data in the TC 33 capture file:
 - Record: CP07 TCR5
 - Position: 25-44
 - Field: Reference Field 2
- The value for **merchantDefinedInformation[1].key** corresponds to the following data in the TC 33 capture file:
 - Record: CP07 TCR5
 - Position: 45-64
 - Field: Reference Field 3

Specifications

- Installment payments with Mastercard on Visa Platform Connect in Brazil:
 - Field Type: Request
 - **Data Type:** String
 - Data Length: 20
- All other transactions:
 - **Field Type:** Request
 - **Data Type:** String
 - Data Length: 50
- Data Type: String
- Data Length: 255

- $\bullet \ REST \ API \ Field: merchant Defined Information []. key$
- SCMP API Field: merchant_defined_data1 through merchant_defined_data100
- Simple Order API Field: merchantDefinedData_mddField_1 through merchantDefinedData_mddField_100

merchant Information. card Acceptor Reference Number

Reference number that facilitates card acceptor/corporation communication and record keeping.

Specifications

Visa Platform Connect

• Field Type: Request

• Data Type: String

• Data Length: 25

Mapping Information

- REST API Field: merchantInformation.cardAcceptorReferenceNumber
- SCMP API Field: card_acceptor_ref_number
- Simple Order API Field: invoiceHeader_cardAcceptorRefNumber

Processor Field Names

The following list provides the Level II/Level III processor field name for each processor that supports Level II or Level III data:

• Visa Platform Connect: cardAcceptorRefNumber

merchantInformation.categoryCode

Four-digit number that the payment card industry uses to classify merchants into market segments.

A payment card company assigned one or more of these values to your business when you started accepting the payment card company's cards.

When you do not include this field in a request, the value in your account is used.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR4

• Position: 150-153

• Field: Merchant Category Code

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 4

- REST API Field: merchantInformation.categoryCode
- SCMP API Field: merchant_category_code

• Simple Order API Field: merchantCategoryCode

merchantInformation.categoryCodeDomestic

Merchant category code for domestic transactions.

This field is supported only on Visa Platform Connect and OmniPay Direct.

The value for this field is a four-digit number that the payment card industry uses to classify merchants into market segments. A payment card company assigned one or more of these values to your business when you started accepting the payment card company's cards. Including this field in a request for a domestic transaction might reduce interchange fees.

Visa Platform Connect

This field is supported only for domestic transactions with Visa or Mastercard in Spain. Domestic means that you and the customer are in the same country.

When you include this field in a Visa request, you must also include the **merchantInformation.categoryCode** field.

When you include this field in a Mastercard request, including the **merchantInformation.categoryCode** field is optional.

OmniPay Direct

When you include this field in a request:

- Do not include the **merchantInformation.categoryCode** field.
- The value for this field overrides the value in your account.

This field is supported only for:

- Domestic transactions with Mastercard in Spain. Domestic means that you and the customer are in the same country.
- Merchants enrolled in the OmniPay Direct interchange program.

• First Data Merchant Solutions (Europe) on OmniPay Direct.

Specifications

• Field Type: Request

• Data Type: Integer

• Length: 4

Mapping Information

• REST API Field: merchantInformation.categoryCodeDomestic

• SCMP API Field: merchant_category_code_domestic

• Simple Order API Field: merchantCategoryCodeDomestic

merchant Information. merchant Descriptor. address 1

Street address for your business location.

① Important: This value must consist of English characters.

This value might be displayed on the cardholder's statement.

When you include this value in your request, Cybersource recommends you also include the merchant descriptor country, merchant descriptor state, and merchant descriptor postal code in your request.

Specifications

• Field Type: Request

• Data Type: String

• Data Length:

• Visa Platform Connect: 29

• All other processors: 60

- REST API Field: merchantInformation.merchantDescriptor.address1
- SCMP API Field: merchant_descriptor_street

 $\bullet \ Simple \ Order \ API \ Field: invoice Header_merchant Descriptor Street$

merchant Information. merchant Descriptor. administrative Area

State code or region code for your business location.

Use the standard state, province, and territory codes for the United States and Canada.

This field is supported only for businesses located in the U.S. or Canada.

(!) Important: This value must consist of Engligh characters.

This value might be displayed on the cardholder's statement.

When you do not include this value in your PIN debit request, Cybersource uses the merchant state from your account.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: merchantInformation.merchantDescriptor.administrativeArea
- SCMP API Field: merchant_descriptor_state

 $\bullet \ Simple \ Order \ API \ Field: invoice Header_mer chant Descriptor State$

merchantInformation.merchantDescriptor.contact

Contact information for your business.

This value must be the city in which your store or outlet is located.

When you include more than one consecutive space, extra spaces are removed.

This value might be displayed on the cardholder's statement.

Payouts

For Chase Paymentech Solutions, you must use one of the following formats:

- PCCCCCCCCCCC
- NNN-NNN-NNNN
- NNN-NNN-NAAA
- NNN-NNN-AAAA
- NNN-AAAAAA

where:

- A: Alphanumeric (alpha or numeric)
- C: Character (alpha or blank)
- N: Numeric
- P: Alpha

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 13

- $\bullet \ REST \ API \ Field: merchant Information. merchant Descriptor. contact$
- SCMP API Field: merchant_descriptor_contact
- Simple Order API Field: invoiceHeader_merchantDescriptorContact

merchantInformation.merchantDescriptor.country

Country code for your business location.

Use the standard ISO Standard Country Codes.

(I) Important: This value must consist of English characters.

This value might be displayed on the cardholder's statement.

When you do not include this value in your request, Cybersource uses the merchant country from your account.

If your business is located in the U.S. or Canada and you include this field in a request, you must also include **merchantInformation.merchantDescriptor.administrativeArea**.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: merchantInformation.merchantDescriptor.country
- SCMP API Field: merchant_descriptor_country

• Simple Order API Field: invoiceHeader_merchantDescriptorCountry

merchantInformation.merchantDescriptor.locality

City for your business location.

This value might be displayed on the cardholder's statement.

When you do not include this value in your PIN debit request, Cybersource uses the merchant city from your account.

(I) Important: The value must consist of English characters.

Payouts

For an OCT transaction, the only supported value is Visa Direct.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 13

- REST API Field: merchantInformation.merchantDescriptor.locality
- SCMP API Field: merchant_descriptor_city

 $\bullet \ Simple \ Order \ API \ Field: invoice Header_mer chant Descriptor City$

merchantInformation.merchantDescriptor.name

Your business name.

This name is displayed on the cardholder's statement. When you include more than one consecutive space, extra spaces are removed.

Important: The value must consist of English characters.

Payouts on Chase Paymentech Solutions

Use one these formats:

- <12-character merchant name>*<9-character product description>
- <7-character merchant name>*<14-character product description>
- <3-character merchant name>*<18-character product description>

Payouts on FDC Compass and Visa Platform Connect

For a credit card bill payment, set the value for this field to the name of the originator providing the credit card bill payment service.

For a funds disbursement, set the value for this field to the name of the originator sending the funds disbursement.

For a prepaid load, set the value for this field to the name of the partner providing the reload service.

PIN Debits

When you do not include this value in a PIN debit request, Cybersource uses the merchant name in your account.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 23

Mapping Information

 $\bullet \ REST\ API\ Field: merchantInformation.merchantDescriptor.name$

• SCMP API Field: merchant_descriptor

• Simple Order API Field: invoiceHeader_merchantDescriptor

merchant Information. merchant Descriptor. name

Your company's name as you want it to appear to the customer in the issuing bank's authentication form.

This value overrides the value specified by your merchant bank.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 25

For Paymentech processor using Cybersource Payouts, the maximum data length is 22.

- REST API Field: merchantInformation.merchantDescriptor.name
- SCMP API Field: pa_merchant_name
- Simple Order API Field: payerAuthEnrollService_merchantName

merchant Information. merchant Descriptor. postal Code

Postal code for your business location.

[] Important: This value must consist of Engligh characters.

(I) Important: Mastercard requires a postal code for any country that uses postal codes. You can provide the postal code in your Cybersource account or you can include this field in your request.

This value might be displayed on the cardholder's statement.

If your business is domiciled in the U.S., you can use a 5-digit or 9-digit postal code. A 9-digit postal code must follow this format: [5 digits][dash][4 digits] **Example:** 12345-6789

If your business is domiciled in Canada, you can use a 6-digit or 9-digit postal code. A 6-digit postal code must follow this format: [alpha][numeric][alpha][space] [numeric][alpha] [numeric] **Example:** A1B 2C3

When you do not include this value in your PIN debit request, Cybersource uses the merchant postal code from your account.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 14

- $\bullet \ REST\ API\ Field: merchant Information. merchant Descriptor. postal Code$
- SCMP API Field: merchant_descriptor_postal_code
- Simple Order API Field: invoiceHeader_merchantDescriptorPostalCode

merchantInformation.merchantDescriptor.url

Address of your company's Web site, for example, http://www.example.com.

This value overrides the value specified by your merchant bank.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 255

- REST API Field: merchantInformation.merchantDescriptor.url
- SCMP API Field: pa_merchant_url
- Simple Order API Field: payerAuthEnrollService_merchantURL

merchantInformation.merchantDomainName

URL or reverse domain name for your business.

This field is supported only for Mastercard digital secure remote payment (DSRP) transactions on FDC Compass and Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 127

• Special Symbols Allowed:

Forward slash (/)

Colon(:)

• Period (.)

- REST API Field: merchantInformation.merchantDomainName
- SCMP API Field: merchant_domain_name
- Simple Order API Field: merchantDomainName

merchant Information. sales Organization Id

Company ID assigned to an independent sales organization.

This field is supported only for aggregator transactions. Get the value for this field from the payment card company.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 106-116

• Field: Independent Sales Organization ID

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 11

Mapping Information

• REST API Field: merchantInformation.salesOrganizationId

• SCMP API Field: sales_organization_id

 $\bullet \ Simple \ Order \ API \ Field: invoice Header_sales Organization ID$

merchantInformation.taxId

Your tax ID number.

Cielo

This field is supported for aggregator authorizations.

Getnet

This field is supported for aggregator authorizations. All characters must be numbers.

Rede

This field is supported for aggregator authorizations.

Software Express

This field is supported for aggregator authorizations.

Visa Platform Connect

This field is supported for these kinds of payments:

• Authorizations with Mastercard in Argentina, Chile, and Paraguay. The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 110-124

∘ Field: Merchant Tax ID

- BNDES transactions in Brazil. The value for this field is your Cadastro Nacional da Pessoa Jurídica (CNPJ) number. The value for this field corresponds to the following data in the TC 33 capture file:
 - Record: CP07 TCR6
 - Position: 40-59
 - Field: BNDES Reference Field 1
- Installment payments with Mastercard in Croatia. The value for this field corresponds to the following data in the TC 33 capture file:
 - Record: CP01 TCR5
 - Position: 79-98
 - Field: Mastercard Croatia Domestic Card Acceptor Tax ID

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

- REST API Field: merchantInformation.taxId
- SCMP API Field: bill_merchant_tax_id
- Simple Order API Field: billTo_merchantTaxID

merchantInformation.transactionLocalDateTime

Local date and time at your physical location.

Include both the date and time in this field or leave it blank.

Format: YYYYMMDDhhmmss

- MM = month
- YYYY = year
- DD = day
- hh = hour
- mm = minutes
- ss = seconds

Card-Present Transactions

This field is supported only on Visa Platform Connect and GPX.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 16-21

• Field: Local Date

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 14

Mapping Information

• REST API Field: merchantInformation.transactionLocalDateTime

• SCMP API Field: transaction_local_date_time

• Simple Order API Fields:

- $^{\circ}\ ccIncremental Auth Service_transaction Local Date Time$
- transactionLocalDateTime

• TSYS Acquiring Solutions: Duty Amount

• Visa Platform Connect: dutyAmount

• Worldpay VAP: dutyAmount

orderInformation.amountDetails.nationalTaxIncluded

Flag that indicates whether a national tax is included in the order total.

Possible values:

- 0: national tax not included
- 1: national tax included

This value must be 1 if the sum of all values > 0.

If you do not include any values in your request, Cybersource does not include in the data it sends to the processor.

- Simple Order API Field: otherTax_vatTaxAmount

Processor Field Names

Processor-specific field names for each processor supporting this field for Level II or Level III processing:

- Chase Paymentech Solutions: VAT/Tax Amount
- Elavon Americas: VAT / Tax Amount (Freight)
- **FDC Compass:** VAT/Tax Amount
- FDC Nashville Global: VAT/Tax Amount
- **GPN:** VAT/Tax Amount (Freight/Shipping)
- OmniPay Direct: VAT (Amount)
- RBS WorldPay Atlanta: VAT Tax Amount
- TSYS Acquiring Solutions: VAT/Tax Amount

orderInformation.amountDetails.taxDetails[].rate

Tax rate for the tax line item.

A maximum of 2 decimal places is allowed. Valid range is 0.00 to 99.99. The value can also be zero.

For example:

- 60%: orderInformation.amountDetails.taxDetails[0].rate=60.00
- 25.5%: orderInformation.amountDetails.taxDetails[0].rate=25.50
- 33.33%: orderInformation.amountDetails.taxDetails[0].rate=33.33

For more information on tax fields, see: Tax Fields

Specifications

American Express Direct

• **Field Type:** Line item request

• Data Type: String

• Data Length: 4

Mapping Information

- REST API Field: orderInformation.amountDetails.taxDetails[].rate
- SCMP API Field: other_tax#_rate

• Simple Order API Field: item_#_otherTax_#_rate

Processor Field Names

The following list provides the Level II/Level III processor field name for each processor that supports Level II or Level III data:

order Information. amount Details. tax Details []. rate

The Value Added Tax (VAT) or other tax rate used to calculate the tax applied to the order.

For RBS WorldPay Atlanta and TSYS Acquiring Solutions: The valid range is between .01 and 99.99 percent. The rate is entered as a decimal. For example:

• **60%**: 0.6000

• **33.33%**: 0.3333

• **25.5%**: 0.2550

For Visa Platform Connect, the valid range is between 0.01 and 99.99 percent. The rate is entered as a percentage. For example:

• **60%**: 60.00

• 33.33%: 33.33

• **25.5%**: 25.50

For all other processors: The valid range is between 1 and 99 percent. The rate is entered as a decimal. For example:

• **60%**: 0.60

• **33%:** 0.33

• **25%:** 0.25

order Information. shipping Details. ship From Locality

City from where the product is shipped.

Specifications

American Express Direct

• Field Type: Request

• Data Type: String

• Data Length: 30

Mapping Information

• REST API Field: orderInformation.shippingDetails.shipFromLocality

• SCMP API Field: ship_from_city

• Simple Order API Field: shipFrom_city

Processor Field Names

The following list provides the Level II/Level III processor field name for each processor that supports Level II or Level III data:

orderInformation.lineItems[].unitPrice

Per-item price of the product.

This is an item-level field.

This value cannot be negative. You can include a decimal point (.), but you cannot include any other special characters. The amount is truncated to the correct number of decimal places.

(I) Important: Some processors have specific requirements and limitations, such as maximum amounts and maximum field lengths.

DCC with a Third-Party Provider

Set this field to the converted amount that was returned by the DCC provider. You must include either this field or **orderInformation.amountDetails.totalAmount** in a request.

Zero Amount Authorizations

If your processor supports zero amount authorizations, you can set this field to @ for an authorization to find out whether the card is lost or stolen.

order Information. amount Details. authorized Amount

Amount that was authorized.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: orderInformation.amountDetails.authorizedAmount
- SCMP API Field: auth_auth_amount
- Simple Order API Field: ccAuthReply_amount

order Information. amount Details. authorized Amount

Amount that was authorized.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: orderInformation.amountDetails.authorizedAmount
- SCMP API Field: incremental_auth_amount
- Simple Order API Field: ccIncrementalAuthReply_amount

order Information. amount Details. authorized Amount

Amount of the purchase.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: orderInformation.amountDetails.authorizedAmount
- SCMP API Field: pin_debit_purchase_auth_amount
- Simple Order API Field: pinDebitPurchaseReply_amount

orderInformation.amountDetails.cashbackAmount

Cashback amount requested by the customer.

The value for this field must be in the acquirer's currency.

Card-Present Credit Card Transactions

This field is supported only on Visa Platform Connect in Germany.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 15-23

• Field: Cashback Amount

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

PIN Debit Transactions

This field is supported only on FDC Nashville Global and Visa Platform Connect.

When a cashback amount is included in a request, the cashback amount must be included in the value for the **orderInformation.amountDetails.totalAmount** field.

Specifications

• Field Type: Request

- Data Type: String
- Data Length:
 - Authorization: 9
 - Authorization Reversal: 9
 - PIN Debit Purchase: 13

- REST API Field: orderInformation.amountDetails.cashbackAmount
- SCMP API Field: cashback_amount
- Simple Order API Field: cashbackAmount

orderInformation.amountDetails.currency (Request)

Currency used for the order.

For possible values, refer to ISO Standard Currency Codes.

For authorization reversal or capture services, you must use the same currency that was used for the authorization.

For the PIN debit reversal service, you must use the same currency that was used for the PIN debit purchase or PIN debit credit that you are reversing.

DCC with a Third-Party Provider

Customer's billing currency.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

- REST API Fields:
 - ${}^{\circ}\ order Information. amount Details. currency$
 - $^{\circ}\ reversalInformation.amountDetails.currency$
- SCMP API Field: currency

• Simple Order API Field: purchaseTotals_currency

orderInformation.amountDetails.currency (Response)

Currency used for the order.

Use a three-character ISO currency code.

For an authorization reversal or capture, you must use the same currency that was used for the authorization.

DCC with a Third-Party Provider: Customer's billing currency.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

- REST API Fields:
 - orderInformation.amountDetails.currency
 - · creditAmountDetails.currency
 - $^{\circ}\ refund Amount Details. currency$
 - reversalAmountDetails.currency
- SCMP API Field: currency

• Simple Order API Field: purchaseTotals_currency

orderInformation.amountDetails.currency

Currency for the amount you requested to be authorized.

This field is returned only for partial authorizations.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

- REST API Field: orderInformation.amountDetails.currency
- SCMP API Field: auth_request_currency
- Simple Order API Field: ccAuthReply_requestCurrency

orderInformation.amountDetails.currency

Currency for the amount you requested for the PIN debit purchase.

This value is returned for partial authorizations.

Refer to ISO Standard Currency Codes for possible values.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

- REST API Field: orderInformation.amountDetails.currency
- SCMP API Field: pin_debit_purchase_request_currency
- Simple Order API Field: pinDebitPurchaseReply_requestCurrency

order Information. amount Details. exchange Rate

Exchange rate returned by the DCC provider.

The value for this field includes a decimal point and a maximum of four decimal places.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 13

- REST API Field: orderInformation.amountDetails.exchangeRate
- SCMP API Field: exchange_rate
- Simple Order API Field: purchaseTotals_exchangeRate

order Information. amount Details. exchange Rate Time Stamp

Time stamp for the exchange rate.

This value is returned by the DCC provider. This value must be in GMT.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 14

• Data Format: YYYYMMDDhhmmss

- REST API Field: orderInformation.amountDetails.exchangeRateTimeStamp
- SCMP API Field: exchange_rate_timestamp
- Simple Order API Field: purchaseTotals_exchangeRateTimeStamp

order Information. amount Details. for eign Amount

Converted amount that was returned by the DCC provider.

Specifications

• Field Type: Request

• Data Type: String

• **Length:** 15

Mapping Information

• REST API Field: orderInformation.amountDetails.foreignAmount

• SCMP API Field: foreign_amount

• Simple Order API Field: purchaseTotals_foreignAmount

orderInformation.amountDetails.foreignCurrency

Customer's billing currency.

Specifications

orderInformation.amountDetails.gratuityAmount

Gratuity or tip amount for restaurants when the card is present.

Allowed only when the orderInformation.amountDetails.gratuityAmount field value is restaurant.

Restaurant data is supported only on Visa Platform Connect.

When your customer uses a debit card or prepaid card, and you receive a partial authorization, the payment networks recommend that you do not submit a capture amount that is higher than the authorized amount. When the capture amount exceeds the partial amount that was approved, the issuer has chargeback rights for the excess amount.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 12

- REST API Field: orderInformation.amountDetails.gratuityAmount
- SCMP API Field: gratuity_amount
- Simple Order API Field: ccCaptureService_gratuityAmount

Amount in your original pricing currency.

This value cannot be negative. You can include a decimal point (.) in this field to denote the currency exponent, but you cannot include any other special characters. If needed, the amount is truncated to the correct number of decimal places.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

- REST API Field: orderInformation.amountDetails.originalAmount
- SCMP API Field: original_amount
- Simple Order API Field: purchaseTotals_originalAmount

orderInformation.amountDetails.originalCurrency

Your local pricing currency code.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 5

- REST API Field: orderInformation.amountDetails.originalCurrency
- SCMP API Field: original_currency
- Simple Order API Field: purchaseTotals_originalCurrency

order Information. amount Details. service Fee Amount

Fee you are charging for the transaction. When this fee is charged, the grand total amount must include the fee.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 12

Mapping Information

• REST API Field: orderInformation.amountDetails.serviceFeeAmount

• SCMP API Field: aft_service_fee

• Simple Order API Field: aft_serviceFee

orderInformation.amountDetails.settlementAmount

Amount deposited into the recipient's account by the issuer.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: orderInformation.amountDetails.settlementAmount
- SCMP API Field: recipient_billing_amount
- Simple Order API Field: recipient_billingAmount

order Information. amount Details. settlement Currency

Currency used by the issuer to deposit the funds into the recipient's account. See the ISO Standard Currency Codes reference guide.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 3

- REST API Field:orderInformation.amountDetails.settlementCurrency
- SCMP API Field: recipient_billing_currency
- Simple Order API Field: recipient_billingCurrency

orderInformation.amountDetails.surcharge.amount

Surcharge amount that you are charging the customer for the transaction.

This field is supported only on Visa Platform Connect.

The surcharge amount is included in the total transaction amount but is passed in a separate field to the issuer and acquirer for tracking. The issuer can provide information about the surcharge amount to the customer.

PIN Debit Transactions

If you include a surcharge amount in the request, you must also do the following:

• Include the surcharge amount in the value for **orderInformation.amountDetails.totalAmount**

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

- $\bullet \ REST\ API\ Field: order Information. amount Details. surcharge. amount$
- SCMP API Field: surcharge_amount

• Simple Order API Field: surchargeAmount

orderInformation.amountDetails.taxDetails[].amount

Total amount of alternate tax for the order.

(I) Important:

Do not confuse this order-level field with the **orderInformation.lineItems[].taxDetails[].amount** line item field.

FDC Nashville Global

The total should not include the local tax amount (field) and national tax (national_tax field) included in the total tax (tax_amount field).

GPN

The maximum amount is 99,999.99.

RBS WorldPay Atlanta

The maximum amount is 99,999.99.

Mapping Information

 $\bullet \ REST \ API \ Field: {\bf orderInformation.amountDetails.taxDetails[].taxID}$

• SCMP API Field: alternate_tax_id

• Simple Order API Field: otherTax_alternateTaxID

Processor Field Names

The following list provides the Level II/Level III processor field name for each processor that supports Level II or Level III data:

- Chase Paymentech Solutions: Alternate Tax ID
- FDC Compass: Alternate Tax ID

Amount you requested to be authorized.

This field is returned only for partial authorizations.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: orderInformation.amountDetails.totalAmount
- SCMP API Field: auth_request_amount
- Simple Order API Field: ccAuthReply_requestAmount

Amount that was captured.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: orderInformation.amountDetails.totalAmount

• SCMP API Field: bill_bill_amount

• Simple Order API Field: ccCaptureReply_amount

Grand total for the order.

This value cannot be negative. You can include a decimal point (.), but you cannot include any other special characters. The amount is truncated to the correct number of decimal places.

(Important: Some processors have specific requirements and limitations, such as maximum amounts and maximum field lengths.

DCC with a Third-Party Provider

Set this field to the converted amount that was returned by the DCC provider. You must include either this field or **orderInformation.lineItems[].unitPrice** in a request.

Original Credit Transaction (OCT) on FDC Compass or Visa Platform Connect

Amount must be less than or equal to 50,000 USD. Amount limits differ depending on limitations imposed by your acquirer in addition to local laws and regulations. Contact your acquirer for more information.

PIN Debit Transactions

If the transaction includes a cash-back amount, that amount must be included in this total amount. If the transaction includes a surcharge amount, that amount must be included in this total amount.

Zero Amount Authorizations

If your processor supports zero amount authorizations, you can set this field to @ for the authorization to verify whether the card is lost or stolen.

Specifications

Comercio Latino

• Field Type: Request

• Data Type: String

- REST API Fields:
 - $^{\circ}\ order Information. amount Details. total Amount$
 - reversalInformation.amountDetails.totalAmount
- SCMP API Field: grand_total_amount
- Simple Order API Field: purchaseTotals_grandTotalAmount

Amount you requested for the PIN debit purchase.

This value is returned for partial authorizations.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: orderInformation.amountDetails.totalAmount
- SCMP API Field: pin_debit_purchase_request_amount
- Simple Order API Field: pinDebitPurchaseReply_requestAmount

orderInformation.billTo.address1

First line of the billing street address as it appears in the payment card issuer records.

Atos

The value for this field must not include colons (:) or non-ASCII characters.

FDMS Nashville

When the street name is numeric, it must be sent in numeric format. For example, if the address is *One First Street*, it must be sent as *1 1st Street*.

Visa Platform Connect

Important:

When you populate billing street address 1 and billing street address 2, Visa Platform Connect concatenates the two values. If the concatenated value exceeds 40 characters, Visa Platform Connect truncates the value at 40 characters before sending it to Visa and the issuing bank. Truncating this value affects AVS results and therefore might also affect risk decisions and charge backs.

Credit card networks cannot process transactions that contain non-ASCII characters. Visa Platform Connect accepts and stores non-ASCII characters correctly and displays them correctly in reports. However, the limitation of the payment card networks prevents Visa Platform Connect from transmitting non-ASCII characters to the payment card networks. Therefore, Visa Platform Connect replaces non-ASCII characters with meaningless ASCII characters for transmission to the payment card networks.

Specifications

orderInformation.billTo.address2

Additional address information.

Example: Attention: Accounts Payable

Atos

The value for this field must not include colons (:) or non-ASCII characters.

Chase Paymentech Solutions, FDC Compass, and TSYS Acquiring Solutions

This value is used for AVS.

FDMS Nashville

The billing address 1 and billing address 2 fields together cannot exceed 20 characters.

Visa Platform Connect

Important:

When you populate billing street address 1 and billing street address 2, Visa Platform Connect concatenates the two values. If the concatenated value exceeds 40 characters, Visa Platform Connect truncates the value at 40 characters before sending it to Visa and the issuing bank. Truncating this value affects AVS results and therefore might also affect risk decisions and charge backs.

Credit card networks cannot process transactions that contain non-ASCII characters. Visa Platform Connect accepts and stores non-ASCII characters correctly and displays them correctly in reports. However, the limitation of the payment card networks prevents Visa Platform Connect from transmitting non-ASCII characters to the payment card networks. Therefore, Visa Platform Connect replaces non-ASCII characters with meaningless ASCII characters for transmission to the payment card networks.

- Simple Order API Field: billTo_street2

orderInformation.billTo.administrativeArea

State or province in the billing address.

Use a state, province, or territory code.

Visa Platform Connect

Credit card networks cannot process transactions that contain non-ASCII characters. Visa Platform Connect accepts and stores non-ASCII characters correctly and displays them correctly in reports. However, the limitations of the payment card networks prevent Cybersource Latin American Processing from transmitting non-ASCII characters to the payment card networks. Therefore, Cybersource Latin American Processing replaces non-ASCII characters with meaningless ASCII characters for transmission to the payment card networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: orderInformation.billTo.administrativeArea

• SCMP API Field: bill_state

• Simple Order API Field: billTo_state

orderInformation.billTo.buildingNumber

Building number in the street address.

This field is supported only for:

- Transactions on Cielo.
- Redecard customer validation on Cybersource Latin American Processing.

Example: If the street address is:

Rua da Quitanda 187

then the building number is 187.

Cybersource Latin American Processing

Cybersource Latin American Processing is the name of a specific processing connection. *Cybersource Latin American Processing* does not refer to the general topic of processing in Latin America. The information in this field description, or in this section of the field description, is for the specific processing connection called *Cybersource Latin American Processing*. It is not for any other Latin American processors.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 256

- $\bullet \ REST \ API \ Field: order Information. bill To. building Number$
- SCMP API Field: bill_building_number
- Simple Order API Field: billTo_buildingNumber

First line in the street address of the company purchasing the product.

Other Processors

• Field Type: Request

• Data Type: String

• Data Length: 50

Mapping Information

- REST API Field: orderInformation.billTo.locality
- SCMP API Field: bill_city
- Simple Order API Field: billTo_city

orderInformation.billTo.phoneNumber

Customer's phone number.

Include the country code when the order is from outside the U.S.

Visa Platform Connect

Credit card networks cannot process transactions that contain non-ASCII characters. Visa Platform Connect accepts and stores non-ASCII characters correctly and displays them correctly in reports. However, the limitations of the payment card networks prevent Cybersource Latin American Processing from transmitting non-ASCII characters to the payment card networks. Therefore, Cybersource Latin American Processing replaces non-ASCII characters with meaningless ASCII characters for transmission to the payment card networks.

For installment payments with Mastercard in Brazil, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR4

• Position: 40-50

• Field: Buyer Phone Number

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Visa Platform Connect for Installment Payments with Mastercard in Brazil:

• **Field Type:** Request

• **Type:** String

• Length: 11

• Other Processors:

• Field Type: Request

• **Type:** String

• Length: 15

Mapping Information

• REST API Field: orderInformation.billTo.phoneNumber

• SCMP API Field: customer_phone

• Simple Order API Field: billTo_phoneNumber

orderInformation.billTo.postalCode

Postal code in the billing address.

The postal code must consist of 5 to 9 digits.

When the billing country is the U.S., the 9-digit postal code must follow this format: [5 digits][dash][4 digits].

Example: 12345-6789

When the billing country is Canada, the 6-digit postal code must follow this format: [alpha][numeric][alpha][space][numeric][alpha][numeric]

Example: A1B 2C3

American Express Direct

Before the postal code is sent to the processor, all non-alphanumeric characters are removed, and if the remaining value is longer than nine characters, the value is truncated starting from the right side.

Atos

The value for this field must not include colons (:) or non-ASCII characters.

Visa Platform Connect

Credit card networks cannot process transactions that contain non-ASCII characters. Visa Platform Connect accepts and stores non-ASCII characters correctly and displays them correctly in reports. However, the limitations of the payment card networks prevent Cybersource Latin American Processing from transmitting non-ASCII characters to the payment card networks. Therefore, Cybersource Latin American Processing replaces non-ASCII characters with meaningless ASCII characters for transmission to the payment card networks.

orderInformation.lineItems[].productCode

Type of product.

This is a line-item level field.

This value is used to determine the category that the product is in, such as electronic, physical, service, or shipping.

Possible values:

- adult content: Adult content.
- coupon: Coupon applied to the entire order.
- default: Default value for the product code. The value default is used when a request message does not include a value for the product code.
- electronic_good: Electronic product other than software.
- electronic_software: Software distributed electronically rather than on disks or other media.
- gift_certificate: Gift certificate.
- handling_only: Fee that you charge your customer to cover your administrative selling costs.
- service: Service that you perform for your customer.
- shipping_and_handling: Handling portion is the fee that you charge your customer to cover your administrative selling costs. Shipping is the charge for shipping the product to your customer.
- shipping_only: Charge for transporting tangible personal property from your location to your customer. You must maintain documentation that clearly establishes the location where the title to the property passed from you to your customer.
- subscription: subscription to a website or other content.

For an authorization request, when you set this field to a value other than default or any of the values for shipping or handling, the following fields are required:

- orderInformation.lineItems[].productSku
- orderInformation.lineItems[].productName
- orderInformation.lineItems[].quantity

Specifications

• Field Type: Line-item

• Data Type: String

• Data Length: 255

- REST API Field: orderInformation.lineItems[].productCode
- SCMP API Field: product_code
- Simple Order API Field: item_#_productCode

$order Information. I in el tems \cite{continue}. product Name$

Name of product.

This is a line-item level field.

Specifications

• Field Type: Line-item

• Data Type: String

• Data Length: 255

- REST API Field: orderInformation.lineItems[].productName
- SCMP API Field: product_name
- Simple Order API Field: item_#_productName

orderInformation.lineItems[].productSKU

Identification code for the product.

This is a line-item level field.

Specifications

• Field Type: Line-item

• Data Type: String

• Data Length: 255

- REST API Field: orderInformation.lineItems[].productSku
- SCMP API Field: merchant_product_sku
- Simple Order API Field: item_#_productSKU

orderInformation.lineItems[].quantity

Quantity of the product.

This is a line-item field.

The default is 1.

Specifications

• Field Type: Line Item request

• Data Type: Integer

• Data Length: 9

- REST API Field: orderInformation.lineItems[].quantity
- SCMP API Field: quantity
- Simple Order API Field: item_#_quantity

orderInformation.lineItems[].taxAmount

Total tax to apply to the product.

This is a line-item level field.

This value cannot be negative. The tax amount and the unit price must be in the same currency.

The tax amount value is additive as shown in the following example.

Example: This example uses a two-exponent currency such as USD:

1. You include the following offers in your request:

```
orderInformation.lineItems[0].unitPrice=10.00
orderInformation.lineItems[0].quantity=1
orderInformation.lineItems[0].taxAmount=0.80
orderInformation.lineItems[1].unitPrice=20.00
orderInformation.lineItems[1].quantity=1
orderInformation.lineItems[1].taxAmount=1.60
```

2. The total authorized amount is 32.40, not 30.00 with 2.40 of tax included.

Airline Processing

Tax Calculation

Optional field for U.S., Canadian, international tax, and value-added taxes.

When you want to include **orderInformation.lineItems[].taxAmount** and also request the tax service, see the tax calculation service guide.

Specifications

• Field Type: Line-item

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: orderInformation.lineItems[].taxAmount

• SCMP API Field: tax_amount

• Simple Order API Field: item_#_taxAmount

orderInformation.lineItems[].taxAppliedAfterDiscount

Flag to indicate how you handle discount at the line item level.

Possible values:

- 0: no line level discount provided
- 1: tax was calculated on the post-discount line item total
- 2: tax was calculated on the pre-discount line item total

Visa inserts a 0 (zero) value if an invalid value is included in this field.

This field relates to the value in the **orderInformation.amountDetails.discountAmount** field.

Specifications

Visa Platform Connect

• Field Type: Line item request

• Data Type: String

• Data Length: 1

- REST API Field: orderInformation.lineItems[].taxAppliedAfterDiscount
- SCMP API Field: discount_management_indicator

• Simple Order API Field: item_#_discountManagementIndicator

Processor Field Names

The following list provides the Level II/Level III processor field name for each processor that supports Level II or Level III data:

• Visa Platform Connect: discountManagementIndicator

orderInformation.lineItems[].taxDetails[].amount (OmniPay Direct)

Tax amount on shipping/freight.

Specifications

OmniPay Direct

• Field Type: Line item request

• Data Type: String

• Data Length: 12

Mapping Information

• REST API Field: orderInformation.lineItems[].taxDetails[].amount

• SCMP API Field: alternate_tax_amount

- Elavon Americas: National / Alternate Tax Included
- FDC Nashville Global: Other Tax Indicator

- RBS WorldPay Atlanta: Alternate Tax Indicator
- TSYS Acquiring Solutions: Alternate Tax Amount Indicator

orderInformation.lineItems[].taxDetails[].rate

Alternative tax rate applied to the item.

FDC Nashville Global

For Mastercard, this is the rate for a special tax.

For Visa, this is a VAT tax or other tax rate.

OmniPay Direct

This rate is used to generate the value of the **orderInformation.lineItems[].taxDetails[].amount** Line item field.

Whe you include the **orderInformation.lineItems[].taxDetails[].amount** Line item field or the **orderInformation.amountDetails.taxDetails[].amount** request field, do not include the **orderInformation.lineItems[].taxDetails[].rate** field. The **orderInformation.amountDetails.taxDetails[].amount** request field rate will be set using the following equation:

orderInformation.amountDetails.taxDetails[].amount / orderInformation.lineItems[].unitPrice field.

For Visa, this is a VAT tax or other tax rate.

Specifications

orderInformation.reordered

Indicates whether the cardholder is reordering previously purchased merchandise.

This field can contain one of these values:

• **01**: First time ordered

• 02: Reordered

Specifications

• Field Type: Request

• Data Type: Boolean

- REST API Field: orderInformation.reordered
- SCMP API Field: pa_reorder
- Simple Order API Field: payerAuthEnrollService_reorder

order Information. shipping Details. ship From Postal Code

Postal code for the address from which the goods are shipped, which is used to establish nexus.

The default is the postal code associated with your account. The postal code must consist of 5 to 9 digits.

U.S.

Format for 9-digit postal code in the U.S.: [5 digits][dash][4 digits]

Example: 12345-6789

Canada

Format for 6-digit postal code in Canada: [alpha][numeric][alpha][space] [numeric][alpha][numeric]

Example: A1B 2C3

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

Mapping Information

• REST API Field: orderInformation.shippingDetails.shipFromPostalCode

- SCMP API Field: ship_from_zip
- $\bullet \ Simple \ Order \ API \ Field: shipFrom_postalCode$

order Information. shipping Details. shipping Method

Shipping method for the product.

Possible values:

- lowcost: Lowest-cost service.
- sameday: Courier or same-day service.
- oneday: Next-day or overnight service.
- twoday: Two-day service.
- threeday: Three-day service.
- pickup: Store pick-up.
- other: Other shipping method.
- none: No shipping method because product is a service or subscription.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

Mapping Information

 $\bullet \ REST\ API\ Field: order Information. shipping Details. shipping Method$

- SCMP API Field: shipping_method
- $\bullet \ Simple \ Order \ API \ Field: ship To_shipping Method$

order Information. ship To. address 1

First line of the shipping address.

Specifications

• Worldpay VAP:

• **Data Type:** Request

• **Data Format:** String

• Data Length: 35

- REST API Field: orderInformation.shipTo.address1
- SCMP API Field: ship_to_address1
- Simple Order API Field: shipTo_street1

order Information. ship To. address 2

Second line of the shipping address.

Specifications

• Worldpay VAP:

• **Data Type:** Request

• **Data Format:** String

• Data Length: 35

Mapping Information

• REST API Field: orderInformation.shipTo.address2

• SCMP API Field: ship_to_address2

• Simple Order API Field: shipTo_street2

order Information. ship To. administrative Area

State or province of the shipping address.

Use a state, province, or territory code.

Tax Calculation

Optional field for U.S. and Canadian taxes. Not applicable to international and value added taxes. Billing address objects will be used to determine the cardholder's location when **shipTo** objects are not present.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: orderInformation.shipTo.administrativeArea
- SCMP API Field: ship_to_state
- Simple Order API Field: shipTo_state

order Information. ship To. building Number

Building number in the street address.

Example: The building number is 187 in the following address:

Rua da Quitanda 187

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: orderInformation.shipTo.buildingNumber

• SCMP API Field: ship_to_building_number

• Simple Order API Field: shipTo_buildingNumber

orderInformation.shipTo.country

Country of the shipping address.

Use a two-character ISO country code.

Tax Calculation

Optional field for U.S., Canadian, international tax, and value added taxes. Billing address objects will be used to determine the cardholder's location when **shipTo** objects are not present.

Specifications

• Data Type: Request

• Data Format: String

• Data Length: 2

- REST API Field: orderInformation.shipTo.country
- SCMP API Field: ship_to_country
- Simple Order API Field: shipTo_country

order Information. ship To. destination Code

Indicates destination chosen for the transaction.

Possible values:

- 01 : Ship to cardholder billing address
- 02 : Ship to another verified address on file with merchant
- 03 : Ship to address that is different than billing address
- 04 : Ship to store (store address should be populated on request)
- 05 : Digital goods
- 06: Travel and event tickets, not shipped
- 07 : Other

Specifications

- Field Type: Request
- Data Type: Integer
- Data Length: 2

- REST API Field: orderInformation.shipTo.destinationCode
- SCMP API Field: ship_to_destination_code

• Simple Order API Field: shipTo_destinationCode

order Information. ship To. district

Neighborhood, community, or region within a city or municipality.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 50

Mapping Information

• REST API Field: orderInformation.shipTo.district

• SCMP API Field: ship_to_district

• Simple Order API Field: shipTo_district

order Information. ship To. first Name

First name of the person receiving the shipment.

Specifications

• Worldpay VAP:

• Field Type: Request

• **Data Type:** String

• Data Length: 25

- REST API Field: orderInformation.shipTo.firstName
- SCMP API Field: ship_to_firstname
- Simple Order API Field: shipTo_firstName

order Information. ship To.last Name

Last name of the person receiving the shipment.

Specifications

• Worldpay VAP:

• Field Type: Request

• **Data Type:** String

• Data Length: 25

- REST API Field: orderInformation.shipTo.lastName
- SCMP API Field: ship_to_lastname
- Simple Order API Field: shipTo_lastName

order Information. ship To. phone Number

Phone number for the shipping address.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: orderInformation.shipTo.phoneNumber

• SCMP API Field: ship_to_phone

• Simple Order API Field: shipTo_phoneNumber

order Information. ship To. postal Code

Postal code for the shipping address.

The postal code must consist of 5 to 9 digits.

Canada

Format: [alpha][numeric][alpha][space][numeric][alpha][numeric]

Example: A1B 2C3

U.S.

Format: [5 digits][dash][4 digits]

Example: 12345-6789

American Express Direct: Before sending the postal code to the processor, all non-alphanumeric characters are removed. If the remaining value is longer than nine characters, the value is truncated starting from the right side.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

- REST API Field: orderInformation.shipTo.postalCode
- SCMP API Field: ship_to_zip
- Simple Order API Field: shipTo_postalCode

orderInformation.totaloffersCount

Total number of items in the order.

This field is supported only for Cartes Bancaires Fast'R transactions on Credit Mutuel-CIC.

Possible values: 00 - 99.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

Mapping Information

• REST API Field: orderInformation.totaloffersCount

• SCMP API Field: total_offers_count

• Simple Order API Field:

 ${}^{\circ} \ ccAuth Service_total offers Count$

payerAuthEnrollService_totalOffersCount

p2peConfirmation

Status of the point-to-point encryption (P2PE) confirmation from the merchant.

The confirmation status is recorded only if the **p2peStatus** field is set to Enabled.

Valid values:

- Pending: Merchant has not yet confirmed the P2PE status.
- Confirmed: Merchant has confirmed the P2PE status.
- Rejected: Merchant has rejected the P2PE status.

Specifications

• Field Type: Request

• Data Type: Enum of string

• Data Length: Pre-defined values

Mapping Information

• REST API Field: p2peConfirmation

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

p2peConfirmationDateInUTC

Point-to-point encryption (P2PE) confirmation timestamp in UTC format.

Format: YYYY-MM-DDThh:mm:ssZ

The P2PE confirmation timestamp is recorded only if the **p2peConfirmation** field is set to Confirmed.

Example: 2021-08-11T22:47:57Z equals August 11, 2021, at 22:47:57 (10:47:57 p.m.). The T separates the date and the time. The Z indicates UTC.

Specifications

• Field Type: Request

• Data Type: String (date/time)

• Data Length: Formatted value

Mapping Information

• REST API Field: p2peConfirmationDateInUTC

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

p2peStatus

Status of the point-to-point encryption (P2PE) for the terminal.

Valid values:

- Enabled
- Disabled

Specifications

• Field Type: Request

• Data Type: Enum of string

• Data Length: Pre-defined values

- REST API Field: p2peStatus
- SCMP API Field: No corresponding field
- Simple Order API Field: No corresponding field
- Secure Acceptance API Field: No corresponding field

type

Point of Sale (POS) device name.

When sending a transaction request, you must send either the **partName** field or both the **make** and **model** fields.

The following values can be used:

- INGENICO LANE 3000
- INGENICO LANE 5000
- INGENICO LINK 2500
- PAX Aries 6
- PAX Aries 8
- PAX A60
- PAX A80
- PAX A920
- PAX D135
- PAX E600
- PAX E700
- PAX E800
- PAX E800 lite
- PAX SP30

- PAX S80
- PAX S300
- Verifone E355
- Verifone M400
- Verifone P400

Specifications

• Field Type: Request

• Data Type: String

• Data Size: Pre-defined values

- REST API Field: partName
- SCMP API Field: N/A
- Simple Order API Field: N/A

payment Account Information. card. prepaid Reloadable Code

Flag that indicates whether the prepaid card is reloadable.

This field is returned only for Worldpay VAP.

Possible values:

- Yes: Prepaid card is reloadable.
- No: Prepaid card is not reloadable.
- Unknown: Cannot be determined whether prepaid card is reloadable.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 7

- $\bullet \ REST\ API\ Field: payment Account Information. card. prepaid Reload able Code$
- SCMP API Field: card_prepaid_reloadable
- Simple Order API Field: card_prepaidReloadable

payment Information. account Features. account Status

Status of the account.

This field is returned only for Visa Platform Connect.

Possible values:

- N: Nonregulated
- R: Regulated

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- REST API Field: paymentInformation.accountFeatures.accountStatus
- SCMP API Field: payment_network_token_account_status
- Simple Order API Field: paymentNetworkToken_accountStatus

paymentInformation.accountFeatures.accountType

Type of account.

This field is returned only when you request a balance inquiry.

Authorization

Possible values:

- 00: Not applicable or not specified.
- 10: Savings account.
- 20: Checking account.
- 30: Credit card account.
- 40: Universal account.

PIN Debit

Possible values for PIN debit:

- 00: Not applicable or not specified.
- 10: Savings account.
- 20: Checking account.
- 40: Universal account.
- 96: Cash benefits account.

• 98: Food stamp account.

Specifications

• Field Type: Response

• Type: String

• Length: 2

Mapping Information

• REST Field: paymentInformation.accountFeatures.accountType

• SCMP API Field: auth_account_type

• Simple Order API Field: ccAuthReply_accountType

paymentInformation.accountFeatures.accountType

Type of account.

This value is returned only if you requested a balance inquiry.

Possible values:

- 00: Not applicable or not specified
- 10: Savings account
- 20: Checking account
- 40: Universal account
- 96: Cash benefits account
- 98: Food stamp account

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: paymentInformation.accountFeatures.accountType

- $\bullet \ Simple \ Order \ API \ Field: pin Debit Purchase Reply_account Type$

paymentInformation.accountFeatures.affluenceIndicator

Affluence indicator.

Chase Paymentech Solutions

Flag that indicates whether a customer has high credit limits.

On Chase Paymentech Solutions, this field is returned for Visa, Mastercard, Discover, and Diners Club.

This information enables you to market high cost items to these customers and to understand the kinds of cards that high income customers are using.

Possible values:

- Y: Yes, the customer has high credit limits.
- N: No, the customer does not have high credit limits.
- X: Not applicable / Unknown.

Worldpay VAP

Flag that indicates whether a Visa customer or Mastercard customer is in one of the affluent categories.

Possible values:

- AFFLUENT: High income customer with high spending pattern (>100k USD annual income and >40k USD annual card usage).
- MASS AFFLUENT: High income customer (>100k USD annual income).

Specifications

• Chase Paymentech Solutions:

payment Information. account Features. balance Amount

Remaining balance on the account.

PIN Debit

Remaining balance on the prepaid card.

Specifications

• Field Type: Response

• Data type: String

• Data Length: 12

- REST Field: paymentInformation.accountFeatures.balanceAmount
- SCMP API Field: auth_account_balance
- Simple Order API Field: ccAuthReply_accountBalance

payment Information. account Features. balance Amount

Remaining balance on the prepaid card.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 12

- REST API Field: paymentInformation.accountFeatures.balanceAmount
- SCMP API Field: pin_debit_purchase_auth_amount
- Simple Order API Field: pinDebitPurchaseReply_accountBalance

paymentInformation.accountFeatures.balanceAmountType

Type of amount.

This field is returned only when you request a balance inquiry.

The issuer determines the value for this field.

Possible values for deposit accounts:

- 01: Current ledger (posted) balance.
- <u>02</u>: Current available balance, which is typically the ledger balance minus outstanding authorizations. Some depository institutions also include pending deposits and the credit or overdraft line associated with the account.

Possible values for credit card accounts:

- 01: Credit amount remaining for customer (open to buy).
- 02: Credit limit.

Specifications

• Field Type: Response

• Type: String

• **Length:** 2

- $\bullet \ REST \ Field: payment Information. account Features. balance Amount Type$
- SCMP API Field: auth_amount_type
- Simple Order API Field: ccAuthReply_amountType

paymentInformation.accountFeatures.balanceAmountType

Type of amount.

This value is returned only if you requested a balance inquiry.

The issuer determines the value that is returned.

Possible values:

- 00: Current ledger (posted) balance.
- 02: Current available balance, which is typically the ledger balance less outstanding authorizations. Some depository institutions also include pending deposits and the credit or overdraft line associated with the account.

Specifications

• Field Type: Response

payment Information. account Features. balance Sign

Sign for the remaining balance on the account.

This field is returned only when the processor sends this value.

Possible values:

- positive
- negative

PIN Debit

Sign for the remaining balance on the prepaid card. Returned only when the processor returns this value.

Specifications

• Field Type: Response

• Type: String

• Length: 8

- REST Field: paymentInformation.accountFeatures.balanceSign
- SCMP API Field: auth_account_balance_sign

 $\bullet \ Simple \ Order \ API \ Field: ccAuthReply_accountBalance Sign$

paymentInformation.accountFeatures.category

Card category or Visa product ID. The value of this field depends on service requested. See service-specific description below.
Authorization
Card category.
Incremental Authorization
Visa product ID.
Visa Platform Connect
Visa product ID.
GPN
Visa or Mastercard product ID.
GPX
Mastercard product ID associated with the primary account number (PAN).
RBS WorldPay Atlanta
Type of card used in the transaction.
Possible values:

- B: Business card.
- 0: Noncommercial card.
- R: Corporate card.
- S: Purchase card.
- Blank: Purchase card not supported.

Worldpay VAP

Type of card used in the transaction.

(I) Important: Before using this field on Worldpay VAP, you must contact customer support to have your account configured for this feature.

The only possible value is PREPAID, which specifies a prepaid card.

Specifications

• Data Length: 3

- REST API Field: paymentInformation.accountFeatures.category
- SCMP API Field: incremental_auth_card_category
- Simple Order API Field: ccIncrementalAuthReply_cardCategory

paymentInformation.accountFeatures.category

Mastercard product ID associated with the primary account number (PAN).

This field is returned only for Mastercard transactions on Visa Platform Connect.

For the possible values available for this field, refer to Mastercard Product IDs in the credit card services guide (see Related information below).

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 3

- REST API Field: paymentInformation.accountFeatures.category
- SCMP API Field: payment_network_token_original_card_category
- Simple Order API Field: paymentNetworkToken_originalCardCategory

paymentInformation.accountFeatures.commercial

Flag that indicates whether the card is a commercial card.

This field is returned only for Visa and Mastercard on Chase Paymentech Solutions.

A commercial card enables you to include Level II data in a request.

Possible values:

- Y: Yes, the card is a commercial card.
- N: No, the card is not a commercial card.
- x: Not applicable / Unknown.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- REST Field: paymentInformation.accountFeatures.commercial

• Simple Order API Field: ccAuthReply_cardCommercial

paymentInformation.accountFeatures.currency

Currency of the remaining balance on the account.

PIN Debit

Remaining balance on the prepaid card.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

- REST Field: paymentInformation.accountFeatures.currency
- SCMP API Field: auth_account_balance_currency
- Simple Order API Field: ccAuthReply_accountBalanceCurrency

paymentInformation.accountFeatures.currency

Currency of the remaining balance on the prepaid card.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

- REST API Field: paymentInformation.accountFeatures.currency
- SCMP API Field: pin_debit_purchase_account_balance_currency
- Simple Order API Field: pinDebitPurchaseReply_accountBalanceCurrency

paymentInformation.accountFeatures.group

Type of commercial card.

This field is returned only for Visa Platform Connect.

Possible values:

- B: Business card.
- R: Corporate card.
- S: Purchasing card.
- 0: Noncommercial card.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- REST Field: paymentInformation.accountFeatures.group
- SCMP API Field: auth_card_group

 $\bullet \ Simple \ Order \ API \ Field: ccAuthReply_cardGroup$

paymentInformation.accountFeatures.healthCare

Flag that indicates whether the card is a healthcare card.

This field is returned only for Visa and Mastercard on Chase Paymentech Solutions.

Possible values:

- Y: Yes, the card is a healthcare card.
- N: No, the card is not a healthcare card.
- x: Not applicable / Unknown.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- $\bullet \ REST \ Field: payment Information. account Features. health Care$
- SCMP API Field: auth_card_healthcare
- Simple Order API Field: ccAuthReply_cardHealthcare

paymentInformation.accountFeatures.level3Eligible

This field indicates whether the card is eligible for Level III interchange fees.

This field is returned only for Visa and Mastercard on Chase Paymentech Solutions.

This information enables you to include Level III data in a request.

Possible values:

- Y: Yes, the card is eligible for Level III interchange fees.
- N: No, the card is not eligible for Level III interchange fees.
- x: Not applicable / Unknown.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST Field: paymentInformation.accountFeatures.level3Eligible
- SCMP API Field: auth_card_level_3_eligible

 $\bullet \ Simple \ Order \ API \ Field: ccAuthReply_cardLevel 3 Eligible$

paymentInformation.accountFeatures.payRoll

This field indicates whether the card is a payroll card.

This field is returned only for Visa, Discover, Diners Club, and JCB on Chase Paymentech Solutions.

Possible values:

- Y: Yes, the card is a payroll card.
- N: No, the card is not a payroll card.
- x: Not applicable / Unknown.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- REST API Field: paymentInformation.accountFeatures.payRoll
- SCMP API Field: auth_card_payroll
- Simple Order API Field: ccAuthReply_cardPayroll

paymentInformation.accountFeatures.pinlessDebit

This field indicates whether the card is supported for PINless debits.

This field is returned only for Visa and Mastercard on Chase Paymentech Solutions.

Possible values:

- Y: Yes, the card is supported for PINless debits.
- N: No, the card is not supported for PINless debits.
- x: Not applicable / Unknown.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: payment Information. account Features. pinless Debit$

paymentInformation.accountFeatures.prepaid

This field indicates whether the card is a prepaid card.

This field is returned only for Visa, Mastercard, Discover, Diners Club, and JCB on Chase Paymentech Solutions.

This information enables you to determine when a gift card or prepaid card is presented for use when establishing a new recurring, installment, or deferred billing relationship.

Possible values:

- Y: Yes, the card is a prepaid card.
- N: No, the card is not a prepaid card.
- x: Not applicable / Unknown.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

Mapping Information

• REST API Field: paymentInformation.accountFeatures.prepaid

• SCMP API Field: auth_card_prepaid

• Simple Order API Field: ccAuthReply_cardPrepaid

paymentInformation.accountFeatures.regulated

This field indicates whether the card is regulated according to the Durbin Amendment.

This field is returned only for Visa, Mastercard, Discover, Diners Club, and JCB on Chase Paymentech Solutions.

When a card is regulated according to the Durbin Amendment, it means that the issuer has assets that exceed 10B USD and is subject to price caps and interchange rules.

Possible values:

- Y: Yes, the card is regulated according to the Durbin Amendment.
- N: No, the card is not regulated according to the Durbin Amendment.
- x: Not applicable / Unknown.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: paymentInformation.accountFeatures.regulated
- SCMP API Field: auth_card_regulated

• Simple Order API Field: ccAuthReply_cardRegulated

paymentInformation.accountFeatures.signatureDebit

This field indicates whether the card is a signature debit card.

This field is returned only for Visa, Mastercard, and Maestro (International) on Chase Paymentech Solutions.

This information enables you to alter the way an order is processed. For example, you might not want to reauthorize a transaction for a signature debit card, or you might want to perform reversals promptly for a signature debit card.

Possible values:

- Y: Yes, the card is a signature debit card.
- N: No, the card is not a signature debit card.
- x: Not applicable / Unknown.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- REST API Field: paymentInformation.accountFeatures.signatureDebit
- SCMP API Field: auth_card_signature_debit

 $\bullet \ Simple \ Order \ API \ Field: ccAuthReply_cardSignatureDebit$

payment Information. account Features. balance Sign

Sign for the remaining balance on the prepaid card.

Returned only when the processor returns this value.

Possible values:

- Positive
- Negative

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 8

- REST API Field: paymentInformation.accountFeatures.balanceSign
- SCMP API Field: pin_debit_purchase_account_balance_sign
- Simple Order API Field: pinDebitPurchaseReply_accountBalanceSign

payment Information. card. account Encoder ID

Identifier for the issuing bank that provided the customer's encoded account number.

This field is supported only on Chase Paymentech Solutions. Contact the processor to obtain the bank's ID.

Related information: Encoded Account Numbers

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

Mapping Information

• REST Field: paymentInformation.card.accountEncoderId

• SCMP API Field: account_encoder_id

• Simple Order API Field: card_accountEncoderID

paymentInformation.card.expirationMonth

Two-digit month in which the payment card expires.

Format: MM

Possible values: 01 through 12. Leading 0 is required.

Barclays and Streamline

For Maestro (UK Domestic and International) cards, this value must be valid (01 through 12) but is not required to be a valid expiration date. In other words, an expiration date that is in the past does not cause Cybersource to reject a request. However, an invalid expiration date might cause the issuer to reject a request.

Chase Paymentech Solutions

For encoded account numbers (paymentInformation.card.type or paymentInformation.tokenizedCard.type=039), set the value for this field to 12 if the card does not provide an expiration date.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Fields:

- paymentInformation.card.expirationMonth
- $^{\circ}\ payment Information. to kenized Card. expiration Month$
- SCMP API Field: customer_cc_expmo
- Simple Order API Field: card_expirationMonth

paymentInformation.card.expirationYear

Four-digit year in which the payment card expires.

Format: YYYY

Barclays

For Maestro (UK Domestic and International) cards on Barclays and Streamline, this value must be valid (1900 through 3000) but is not required to be a valid expiration date. In other words, an expiration date that is in the past does not cause Cybersource to reject a request. However, an invalid expiration date might cause the issuer to reject a request.

Streamline

For Maestro (UK Domestic and International) cards on Barclays and Streamline, this value must be valid (1900 through 3000) but is not required to be a valid expiration date. In other words, an expiration date that is in the past does not cause Cybersource to reject a request. However, an invalid expiration date might cause the issuer to reject a request.

Chase Paymentech Solutions

For encoded account numbers (paymentInformation.card.type or paymentInformation.tokenizedCard.type=039), set the value for this field to 2021 if the card does not provide an expiration date.

FDC Nashville Global

You can provide two digits or four digits. When you provide two digits, they must be the last two digits of the year.

FDMS South

You can provide two digits or four digits. When you provide two digits, they must be the last two digits of the year.

Specifications

- FDC Nashville Global: You can provide two digits or four digits. When you provide two digits, they must be the last two digits of the year.
- FDMS South: You can provide two digits or four digits. When you provide two digits, they must be the last two digits of the year.

- REST API Fields:
 - $^{\circ}\ payment Information. card. expiration Year$
 - $^{\circ}\ payment Information. to kenized Card. expiration Year$
- SCMP API Field: customer_cc_expyr
- Simple Order API Field: card_expirationYear

paymentInformation.card.issueNumber

Number of times a Maestro (UK Domestic) card has been issued to the account holder.

The card might or might not have an issue number. The number can consist of one or two digits, and the first digit might be a zero. When you include this value in a request, include exactly what is printed on the card. A value of 2 is different than a value of 02.

Do not include the field, even with a blank value, if the card is not a Maestro (UK Domestic) card.

The issue number is not required for Maestro (UK Domestic) transactions.

Specifications

• Field Type: Request

• Type: String

• **Length:** 5

Mapping Information

• REST API Field: paymentInformation.card.issueNumber

• SCMP API Field: customer_cc_issue_number

• Simple Order API Field: card_issueNumber

paymentInformation.card.number

Payment card number or network token.

Chase Paymentech Solutions

When processing encoded account numbers, use this field for the encoded account number.

Specifications

• FDMS Nashville (Card-Present Transactions only):

• Field Type: Request

• **Data Type:** String

• Data Length: 19

Mapping Information

• REST API Field: paymentInformation.card.number

• SCMP API Field: customer_cc_number

• Simple Order API Field: card_accountNumber

paymentInformation.card.passPhrase

Card password.

The card password consists of 2 digits and is considered Personally Identifiable Information (PII).

Specifications

• Field Type: Request

• Data Type: Numeric String

• Data Length: 2

Mapping Information

• REST API Field: paymentInformation.card.passPhrase

• SCMP API Field: card_pass_phrase

• Simple Order API Field: card_passPhrase

paymentInformation.card.personalData

Personal data used to validate the identify of the cardholder.

The data used will be either 6 digits representing the cardholder's date of birth or a 10-digit business number. This data is considered Personally Identifiable Information (PII).

Specifications

• Field Type: Request

• Data Type: String

• Data Length: Up to 10

Mapping Information

• REST API Field: paymentInformation.card.personalData

• SCMP API Field: card_personal_data

• Simple Order API Field: card_personalData

paymentInformation.card.productName

Name of the card product.

This field is supported only for BNDES transactions on Visa Platform Connect.

Set the value for this field to BNDES.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR4

• Position: 115-120

• Field: Brazil Country Data

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: paymentInformation.card.productName

• SCMP API Field: card_product_name

• Simple Order API Field: card_productName

paymentInformation.card.securityCode

Card verification number (CVN).

Refer to the CVN information in *Credit Card Services Using the SCMP API*.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 20

- REST API Fields:
 - $^{\circ}\ payment In formation. card. security Code$
 - $^{\circ}\ payment Information. to kenized Card. security Code$
- SCMP API Field: customer_cc_cv_number
- Simple Order API Field: card_cvNumber

paymentInformation.card.securityCodeIndicator

Flag that specifies whether a CVN code was sent.

Possible values:

- O (default): CVN service not requested. This default value is used when you do not include the **paymentInformation.card.securityCode** or **paymentInformation.tokenizedCard.securityCode** field in the request.
- 1 (default): CVN service requested and supported. This default value is used when you include the **paymentInformation.card.securityCode** or **paymentInformation.tokenizedCard.securityCode** field in the request.
- 2: CVN on payment card is illegible.
- 9: CVN not imprinted on payment card.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: paymentInformation.card.securityCodeIndicator
- SCMP API Field: customer_cc_cv_indicator

• Simple Order API Field: card_cvIndicator

paymentInformation.card.sourceAccountType

Flag that specifies the type of account associated with the card.

The cardholder provides this information during the payment process.

Possible values:

- CH: Checking account
- CR: Credit card account
- SA: Savings account

This field is required for transactions with Brazilian-issued cards.

Combo cards in Brazil contain credit and debit functionality in a single card. Visa systems use a credit bank identification number (BIN) for this type of card. Using the BIN to determine whether a card is debit or credit can cause transactions with these cards to be processed incorrectly. It is strongly recommended that you include this field for combo card transactions.

Cielo and Comercio Latino for Credit Card Transactions

On these processors, this field is supported only for authorizations. Possible values:

- CR: Credit card
- DB: Debit card

Visa Platform Connect for Credit Card Transactions

For combo card transactions with Mastercard in Brazil, the field is **paymentInformation.card.useAs**or **paymentInformation.card.sourceAccountType** fields are also supported.

Possible values:

- CH: Checking account
- CR: Credit card account
- LI: Line of credit or credit portion of combo card
- PP: Prepaid card or prepaid portion of combo card
- SA: Savings account

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR0

• Positions: 42-43

• Field: Account Selection

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Fields:

paymentInformation.card.useAs

- $^{\circ}\ payment Information. card. source Account Type$

paymentInformation.card.sourceAccountTypeDetails

Type of account for a line of credit or prepaid card.

This field is supported only for combo card transactions in Brazil on Visa Platform Connect.

Include this field when the value for the or field is line of credit (LI) or prepaid card (PP).

Line of Credit

Possible values:

• AGRC: Visa Agro Custeio.

• AGRE: Visa Agro Electron.

• AGRI: Visa Agro Investimento.

• AGRO: Visa Agro.

Prepaid Card

Possible values:

• VVA: Visa Vale Alimentacao.

• VVF: Visa Vale Flex.

• VVR: Visa Vale Refeicao.

TC 33 Capture File

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR0

• Position: 44-47

• Field: Account Accessed

Specifications

- REST API Field: paymentInformation.card.sourceAccountTypeDetails
- SCMP API Field: override_payment_details
- Simple Order API Fields:
 - $^{\circ} \ ccAuth Service_override Payment Details$
 - ${}^{\circ}\: ccCreditService_overridePaymentDetails$

paymentInformation.card.startMonth

Month of the start of the Maestro (UK Domestic) card validity period.

Do not include the field, even with a blank value, if the card is not a Maestro (UK Domestic) card.

Possible values: 01 through 12.

The start date is not required for Maestro (UK Domestic) transactions.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

• Data Format: MM

- REST API Field: paymentInformation.card.startMonth
- SCMP API Field: customer_cc_startmo
- Simple Order API Field: card_startMonth

paymentInformation.card.startYear

Year of the start of the Maestro (UK Domestic) card validity period.

Do not include the field, even with a blank value, if the card is not a Maestro (UK Domestic) card.

The start date is not required for Maestro (UK Domestic) transactions.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 4

• Data Format: YYYY

Mapping Information

• REST API Field: paymentInformation.card.startYear

• SCMP API Field: customer_cc_startyr

• Simple Order API Field: card_startYear

paymentinformation.card.type

Three-digit value that indicates the card type.

All cards from the issuers below are supported along with Visa and Mastercard.

- BC
- Hana
- Hyundai
- KB Kookmin
- Lotte
- NH Nonghyup
- Samsung
- Shinhan

Possible Values

Each processor and acquirer supports some of the following card types. No processor or acquirer supports all card types.

001: Visa

For all processors except Ingenico ePayments and SIX, the Visa Electron card type is processed the same way that the Visa debit card is processed. Use card type value 001 for Visa Electron.

002: Mastercard and Eurocard

For Eurocard, which is the European regional brand of Mastercard, you must include the card type field in a request for an authorization or stand-alone credit.

003: American Express

004: Discover

005: Diners Club

006: Carte Blanche

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

007: JCB

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

014: EnRoute

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

021: JAL

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

024: Maestro (UK Domestic)

031: Delta

Delta. Use this value only for Ingenico ePayments. For other processors, use 001 for all Visa card types. For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

033: Visa Electron

Use this value only for Ingenico ePayments and SIX. For other processors, use 001 for all Visa card types. For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

034: Dankort

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

036: Cartes Bancaires

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

037: Carta Si

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

039: Encoded account number

This value is supported only on Chase Paymentech Solutions. For this value, you must include the card type field in a request for an authorization or stand-alone credit.

040: UATP

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

042: Maestro (International)

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

050: Hipercard

For this card type on 3.0, , or , you must include the card type field in a request for an authorization or stand-alone credit. This card type is not supported on 1.5.

051: Aura

054: Elo

For this card type on or, you must include the card type field in a request for an authorization or stand-alone credit.

058: Carnet

061: RuPay

062: China UnionPay

Cybersource Integrations

This field is included in the response message when the client software that is installed on the POS terminal uses the Token Management Service (TMS) to retrieve tokenized payment details. You must contact customer support to have your account enabled to receive these fields in the credit response message.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 3

- REST API Field: paymentInformation.card.type
- SCMP API Field: card_type
- Simple Order API Field: card_cardType

paymentInformation.card.typeSelectionIndicator

Flag that identifies how the card type was selected.

This field is supported only on Credit Mutuel- CIC.

Possible values:

- O: Card type was selected based on default acquirer settings.
- 1: Customer selected the card type.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: paymentInformation.card.typeSelectionIndicator
- SCMP API Field: card_type_selection_indicator
- Simple Order API Field: cardTypeSelectionIndicator

paymentInformation.card.useAs

Flag that specifies how to use the card for the requested transaction.

This field is supported only for Mastercard transactions in Brazil on Visa Platform Connect.

Possible values:

- c: Credit transaction.
- D: Debit transaction.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR0

• Position: 51

• Field: Combination Card Transaction Identifier

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

Mapping Information

• REST API Field: paymentInformation.card.useAs

- SCMP API Field: card_usage
- Simple Order API Field: card_usage

paymentInformation.card.useAs

Flag that specifies the type of account associated with the card.

The cardholder provides this information during the payment process.

Possible values:

- CH: Checking account
- CR: Credit card account
- SA: Savings account

This field is required for transactions with Brazilian-issued cards.

Combo cards in Brazil contain credit and debit functionality in a single card. Visa systems use a credit bank identification number (BIN) for this type of card. Using the BIN to determine whether a card is debit or credit can cause transactions with these cards to be processed incorrectly. It is strongly recommended that you include this field for combo card transactions.

Cielo and Comercio Latino for Credit Card Transactions

On these processors, this field is supported only for authorizations. Possible values:

- CR: Credit card
- DB: Debit card

Visa Platform Connect for Credit Card Transactions

For combo card transactions with Mastercard in Brazil, the field is **paymentInformation.card.useAs**or **paymentInformation.card.sourceAccountType** fields are also supported.

Possible values:

- CH: Checking account
- CR: Credit card account
- LI: Line of credit or credit portion of combo card
- PP: Prepaid card or prepaid portion of combo card
- SA: Savings account

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR0

• Positions: 42-43

• Field: Account Selection

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Fields:

paymentInformation.card.useAs

- $^{\circ}\ payment Information. card. source Account Type$
- SCMP API Field: override_payment_method
- Simple Order API Fields:
 - $^{\circ} \ ccAuth Service_override Payment Method \\$
 - $^{\circ} \ ccCreditService_overridePaymentMethod \\$
 - $^{\circ}~pinDebitCreditService_overridePaymentMethod\\$

paymentInformation.customer.customerId

Subscription ID or token ID.

When you use Recurring Billing or Token Management Service and you include this value in a request, many of the fields that are normally required for an authorization or credit become optional.

Payouts

When you include this field in your request, the following fields are optional:

- paymentInformation.card.number
- $\bullet\ payment Information. to kenized Card. expiration Month$
- paymentInformation.tokenizedCard.expirationYear

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 26

- REST API Field: paymentInformation.customer.customerId
- SCMP API Field: subscription_id

 $\bullet \ Simple \ Order \ API \ Field: recurring Subscription Info_subscription ID$

paymentInformation.fluidData.encoding

Encoding method used to encrypt the payment data.

For Apple Pay transactions, the encoding method is Base64.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 6

- REST API Field: paymentInformation.fluidData.encoding
- SCMP API Field: encrypted_payment_encoding
- Simple Order API Field: encryptedPayment_encoding

paymentInformation.fluidData.value

Card-present transactions: encrypted payment data.

Digital payment transactions: encrypted payment data value. If you are using the Cybersource decryption option, populate this field with the encrypted payment data value returned by the Full Wallet request.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3072

- REST API Field: paymentInformation.fluidData.value
- SCMP API Field: encrypted_payment_data
- Simple Order API Field: encryptedPayment_data

paymentInformation.initiationChannel

Mastercard-defined code that indicates how the account information was obtained.

This field is supported only for Mastercard on Visa Platform Connect.

Possible values:

- 00 (default): Card
- 01: Removable secure element that is personalized for use with a mobile phone and controlled by the wireless service provider; examples: subscriber identity module (SIM), universal integrated circuit card (UICC)
- 02: Key fob
- 03: Watch
- 04: Mobile tag
- 05: Wristband
- 06: Mobile phone case or sleeve
- 07: Mobile phone with a non-removable, secure element that is controlled by the wireless service provider
- 08: Removable secure element that is personalized for use with a mobile phone and not controlled by the wireless service provider; example: memory card
- 09: Mobile phone with a non-removable, secure element that is not controlled by the wireless service provider
- 10: Removable secure element that is personalized for use with a tablet or e-book and is controlled by the wireless service provider; examples: subscriber identity module (SIM), universal integrated circuit card (UICC)
- 11: Tablet or e-book with a non-removable, secure element that is controlled by the wireless service provider
- 12: Removable secure element that is personalized for use with a tablet or e-book and is not controlled by the wireless service provider

• 13: Tablet or e-book with a non-removable, secure element that is not controlled by the wireless service provider

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: paymentInformation.initiationChannel

• SCMP API Field: payment_initiation_channel

• Simple Order API Field: paymentInitiationChannel

paymentInformation.paymentSolution

Type of wallet.

This field is supported only for Visa Click to Pay on FDC Compass, FDC Nashville Global, FDI Australia, TSYS Acquiring Solutions, and Visa Platform Connect.

Set the value for this field to VCIND.

On the following processors, the value that Cybersource sends to the processor is the value that the processor expects for this field:

- FDC Compass
- FDC Nashville Global
- FDI Australia
- TSYS Acquiring Solutions

Visa Platform Connect

This field is a *passthrough*; therefore, the value is not verified or modified in any way before it is sent to the processor.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 72-76

• Field: Agent Unique ID

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 5

Mapping Information

• REST API Field: paymentInformation.paymentSolution

• SCMP API Field: wallet_type

• Simple Order API Field: wallet_type

paymentInformation.tokenizedCard.assuranceLevel (Request)

Confidence level of the tokenization.

This value is assigned by the token service provider.

Apple Pay, Google Pay, and Samsung Pay Transactions: This field is supported only for FDC Compass and Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: paymentInformation.tokenizedCard.assuranceLevel
- SCMP API Field: payment_network_token_assurance_level
- Simple Order API Field: paymentNetworkToken_assuranceLevel

paymentInformation.tokenizedCard.assuranceLevel (Response)

Confidence level of the tokenization.

This value is assigned by the token service provider.

Apple Pay, Google Pay, and Samsung Pay Transactions: This field is supported only for FDC Compass and Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: paymentInformation.tokenizedCard.assuranceLevel
- SCMP API Field: payment_network_token_assurance_level
- Simple Order API Field: paymentNetworkToken_assuranceLevel

paymentInformation.tokenizedCard.cryptogram

Token authentication verification value cryptogram.

For token-based transactions with 3D Secure, you must submit both types of cryptograms: network token and 3D Secure.

The value for this field must be 28-character Base64 or 40-character hex binary. All cryptograms use one of these formats.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 40

Mapping Information

• REST API Field: paymentinformation.tokenizedCard.cryptogram

• SCMP API Field: network_token_cryptogram

• Simple Order API Field: ccAuthService_networkTokenCryptogram

paymentInformation.tokenizedCard.expirationMonth

Two-digit month in which the payment card expires.

Format: MM

Possible values: 01 through 12. Leading 0 is required.

Barclays and Streamline

For Maestro (UK Domestic and International) cards, this value must be valid (01 through 12) but is not required to be a valid expiration date. In other words, an expiration date that is in the past does not cause Cybersource to reject a request. However, an invalid expiration date might cause the issuer to reject a request.

Chase Paymentech Solutions

For encoded account numbers (paymentInformation.card.type or paymentInformation.tokenizedCard.type=039), set the value for this field to 12 if the card does not provide an expiration date.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Fields:

- paymentInformation.card.expirationMonth
- $^{\circ}\ payment Information. to kenized Card. expiration Month$
- SCMP API Field: customer_cc_expmo
- Simple Order API Field: card_expirationMonth

payment Information. to kenized Card. expiration Month

Month in which the token expires.

This field is returned only for merchant-initiated transactions with Elavon Americas.

This field is included in the response message when it decrypts the payment blob for the tokenized transaction.

Format: MM

Possible values: 01 through 12.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

- REST API Field: paymentInformation.tokenizedCard.expirationMonth
- SCMP API Field: token_expiration_month
- Simple Order API Field: token_expirationMonth

paymentInformation.tokenizedCard.expirationYear

Four-digit year in which the payment card expires.

Format: YYYY

Barclays

For Maestro (UK Domestic and International) cards on Barclays and Streamline, this value must be valid (1900 through 3000) but is not required to be a valid expiration date. In other words, an expiration date that is in the past does not cause Cybersource to reject a request. However, an invalid expiration date might cause the issuer to reject a request.

Streamline

For Maestro (UK Domestic and International) cards on Barclays and Streamline, this value must be valid (1900 through 3000) but is not required to be a valid expiration date. In other words, an expiration date that is in the past does not cause Cybersource to reject a request. However, an invalid expiration date might cause the issuer to reject a request.

Chase Paymentech Solutions

For encoded account numbers (paymentInformation.card.type or paymentInformation.tokenizedCard.type=039), set the value for this field to 2021 if the card does not provide an expiration date.

FDC Nashville Global

You can provide two digits or four digits. When you provide two digits, they must be the last two digits of the year.

FDMS South

You can provide two digits or four digits. When you provide two digits, they must be the last two digits of the year.

Specifications

- FDC Nashville Global: You can provide two digits or four digits. When you provide two digits, they must be the last two digits of the year.
- FDMS South: You can provide two digits or four digits. When you provide two digits, they must be the last two digits of the year.

- REST API Fields:
 - $^{\circ}\ payment Information. card. expiration Year$
 - $^{\circ}\ payment Information. to kenized Card. expiration Year$
- SCMP API Field: customer_cc_expyr
- Simple Order API Field: card_expirationYear

paymentInformation.tokenizedCard.expirationYear

Year in which the token expires.

This field is returned only for merchant-initiated transactions with Elavon Americas.

This field is included in the response message when it decrypts the payment blob for the tokenized transaction.

Format: YYYY

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

Mapping Information

 $\bullet \ REST\ API\ Field: payment Information. to kenized Card. expiration Year$

• SCMP API Field: token_expiration_year

• Simple Order API Field: token_expirationYear

paymentInformation.tokenizedCard.prefix

First six digits of token.

This field is returned only for merchant-initiated transactions with Elavon Americas.

This field is included in the response message when it decrypts the payment blob for the tokenized transaction.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 6

Mapping Information

• REST API Field: paymentInformation.tokenizedCard.prefix

• SCMP API Field: token_prefix

• Simple Order API Field: token_prefix

paymentInformation.tokenizedCard.requestorId (Request)

Value that identifies your business and indicates that the cardholder's account number is tokenized.

This value is assigned by the token service provider and is unique within the token service provider's database.

This field is supported only for Chase Paymentech Solutions, FDC Nashville Global, and Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 11

Mapping Information

• REST API Field: paymentInformation.tokenizedCard.requestorId

• SCMP API Field: payment_network_token_requestor_id

• Simple Order API Field: paymentNetworkToken_requestorID

paymentInformation.tokenizedCard.requestorId (Response)

Value that identifies your business and indicates that the cardholder's account number is tokenized.

This value is assigned by the token service provider and is unique within the token service provider's database.

This value is returned only if the processor provides it.

This field is returned only for FDC Nashville Global and Visa Platform Connect.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 11

- REST API Field: paymentInformation.tokenizedCard.requestorId
- SCMP API Field: payment_network_token_requestor_id
- Simple Order API Field: paymentNetworkToken_requestorID

payment Information. to kenized Card. security Code

Card verification number (CVN).

Refer to the CVN information in *Credit Card Services Using the SCMP API*.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 20

- REST API Fields:
 - $^{\circ}\ payment In formation. card. security Code$
 - $^{\circ}\ payment Information. to kenized Card. security Code$
- SCMP API Field: customer_cc_cv_number
- Simple Order API Field: card_cvNumber

payment Information. to kenized Card. storage Method

Type of technology used in the device to store token data.

This field is supported only for FDC Compass.

Possible values:

- <u>001</u>: Secure Element (SE). Smart card or memory with restricted access and encryption to prevent data tampering. For storing payment credentials, an SE is tested against a set of requirements defined by the payment networks.
- 002: Host card emulation (HCE). Emulation of a smart card by using software to create a virtual and exact representation of the card. Sensitive data is stored in a database that is hosted in the cloud. For storing payment credentials, a database must meet very stringent security requirements that exceed PCI DSS.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 3

- REST API Field: paymentInformation.tokenizedCard.storageMethod
- SCMP API Field: payment_network_token_device_tech_type
- Simple Order API Field: paymentNetworkToken_deviceTechType

payment Information. to kenized Card. suffix

Last four digits of token.

This field is returned only for merchant-initiated transactions with Elavon Americas.

This field is included in the response message when it decrypts the payment blob for the tokenized transaction.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

Mapping Information

• REST API Field: paymentInformation.tokenizedCard.suffix

• SCMP API Field: token_suffix

• Simple Order API Field: token_suffix

paymentInformation.tokenizedCard.transactionType

Type of transaction that provided the token data.

This value does not specify the token service provider; it specifies the entity that provided you with information about the token.

Possible values:

- 1: In-app transactions (for Apple Pay, Google Pay, and Samsung Pay transactions).
- 2: Near-field communication (NFC) transaction. The customer's mobile device provided the token data for a contactless EMV transaction. For recurring transactions, use this value if the original transaction was a contactless EMV transaction.

For Google Pay transactions, this field is used only for merchant-initiated transactions with Elavon Americas.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: paymentInformation.tokenizedCard.transactionType
- SCMP API Field: payment_network_token_transaction_type

 $\bullet \ Simple \ Order \ API \ Field: payment Network Token_transaction Type$

paymentProcessor

Details about the payment processor that is associated with the point-of-sale (POS) terminal.

Includes the raw processor name and the processor-specific ID for the terminal.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: Depends on processor requirements.

Mapping Information

• REST API Field: paymentProcessor

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

paymentSoftwareVersion

Version of payment software on the terminal.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 64

- REST API Field: paymentSoftwareVersion
- SCMP API Field: No corresponding field
- Simple Order API Field: No corresponding field
- Secure Acceptance API Field: No corresponding field

pinEncryptionKeyName

Optional name for the PIN encryption Base Derivation Key (BDK) that is loaded on the terminal.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request and Response

• Data Type: String

• Data Length: 64

Mapping Information

• REST API Field: pinEncryptionKeyName

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

pinEncryptionKsi

Key serial identifier of the PIN encryption Base Derivation Key (BDK) that is loaded on the terminal.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request and Response

• Data Type: String

• Data Length: 32

Mapping Information

• REST API Field: pinEncryptionKsi

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

pointOfSaleInformation.amexCAPNData

Point-of-sale details for the transaction.

This field is returned only for American Express Direct.

Cybersource generates this value, which consists of a series of codes that identify terminal capability, security data, and specific conditions present at the time the transaction occurred. To comply with the CAPN requirements, this value must be included in all subsequent follow-on requests, such as captures and follow-on credits.

When you perform authorizations, captures, and credits through Cybersource, Cybersource passes this value from the authorization service to the subsequent services for you. However, when you perform authorizations through Cybersource and perform subsequent services through other financial institutions, you must ensure that requests for captures and credits include this value.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 12

Mapping Information

• REST API Field: pointOfSaleInformation.amexCAPNData

SCMP API Field: auth_pos_data

• Simple Order API Field: ccAuthReply_posData

point Of Sale Information. a mex Capn Data

Point-of-sale data.

This field is supported only for the American Express card type on American Express Direct and FDMS South.

This field enables you to comply with American Express CAPN requirements.

Forced Capture

Obtain the value for this field from the authorization response.

Verbal Authorization

You cannot obtain a value for this field so Cybersource uses the default value. The default value is generated based on various factors of the transaction such as:

- Whether the transaction is an e-commerce transaction.
- Whether the transaction is a card-present transaction.
- Whether the payment data is swiped or keyed.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 12

- $\bullet \ REST \ API \ Field: point Of Sale Information. a mex Capn Data$
- $\bullet \, SCMP \, API \, Field: bill_pos_data$
- Simple Order API Field: ccCaptureService_posData

pointOfSaleInformation.cardholderVerificationMethod[]

Complete list of cardholder verification methods (CVMs) supported by the terminal.

Possible values:

- PIN
- Signature

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

- $\bullet \ REST \ API \ Field: point Of Sale Information. card holder Verification Method []$
- SCMP API Field: terminal_cvm_capabilities_#
- Simple Order API Field: pos_terminalCVMcapabilities_#

point Of Sale Information. card Present

Indicates whether the card is present at the time of the transaction.

Possible values:

- N: Card is not present
- Y: Card is present

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: pointOfSaleInformation.cardPresent
- SCMP API Field: card_present
- Simple Order API Field: pos_cardPresent

pointOfSaleInformation.catLevel

Type of cardholder-activated terminal.

Possible values:

- 1: Automated dispensing machine
- 2: Self-service terminal
- 3: Limited amount terminal
- 4: In-flight commerce (IFC) terminal
- 5: Radio frequency device
- 6: Mobile acceptance terminal
- 7: Electronic cash register
- 8: E-commerce device at your location
- 9: Terminal or cash register that uses a dialup connection to connect to the transaction processing network

Applicable Values for Card-Present Transactions:

- Chase Paymentech Solutions: Only values 1, 2, and 3 are supported.
- FDC Nashville Global: Only values 7, 8, and 9 are supported.
- GPN: Only values 6, 7, 8, and 9 are supported.
- JCN Gateway: Only values 6, 7, 8, and 9 are supported.
- TSYS Acquiring Solutions: Only value 6 is supported.

• Visa Platform Connect: Values 1 through 6 are supported, but some acquirers do not support all six values.

Applicable Values for PIN Debit Transactions:

Only values 7, 8, and 9 are supported.

Specifications

• Field Type: Request

• Data Type: Non-negative integer

• Data Length: 1

Mapping Information

• REST API Field: pointOfSaleInformation.catLevel

• SCMP API Field: cat_level

• Simple Order API Field: pos_catLevel

pointOfSaleInformation.deviceId

Value created by the client software that uniquely identifies the POS device.

This value is not sent to the processor. Instead, the value is forwarded to the Cybersource reporting software.

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 32

Mapping Information

• REST API Field: pointOfSaleInformation.deviceId

• SCMP API Field: pos_device_id

• Simple Order API Field: pos_deviceID

point Of Sale Information. emv. cardholder Verification Method Used

Method that was used to verify the cardholder's identity.

Possible values:

- 0: No verification
- 1: Signature
- 2: PIN

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 1

- $\bullet \ REST\ API\ Field: point Of Sale Information. emv. cardholder Verification Method Used$
- SCMP API Field: cardholder_verification_method
- Simple Order API Field: ccAuthService_cardholderVerificationMethod

pointOfSaleInformation.emv.cardSequenceNumber

Number assigned to a specific card when two or more cards are associated with the same primary account number.

This value enables issuers to distinguish among multiple cards that are linked to the same account. This value can also act as a tracking tool when the issuer reissues cards. When this value is available, it is provided by the chip reader. When the chip reader does not provide this value, do not include this field in your request.

Information about EMV in this topic applies to payment card processing and PIN debit processing. All other information in this topic applies only to payment card processing. PIN debit processing is available only on Visa Platform Connect and FDC Nashville Global.

Specifications

American Express Direct

• Field Type: Request

• Data Type: String with numbers only

• Data Length: 2

- REST API Field: pointOfSaleInformation.emv.cardSequenceNumber
- SCMP API Field: emv_request_card_sequence_number
- Simple Order API Field: emvRequest_cardSequenceNumber

pointOfSaleInformation.emv.chipValidationResult

Cryptogram validation results returned by the entity or service specified in **pointOfSaleInformation.emv.chipValidationType**.

Possible values:

- A: Application cryptogram is valid, but the application transaction counter (ATC) is outside the allowed range. (A large increase in ATC values can indicate data copying or other fraud.)
- C: Chip validation was completed successfully.
- E: Application cryptogram is valid, but the ATC indicates possible replay fraud.
- F: Format error in the chip data.
- G: Application cryptogram is valid but is not a valid authorization request cryptogram (ARQC).
- I: Application cryptogram is invalid.
- T: Application cryptogram is valid, but terminal verification results (TVR) or card verification results (CVR) are invalid.
- U: Application cryptogram could not be validated because of a technical error.

This field is returned only for Mastercard near-field communication (NFC) authorizations that use payment network tokens on Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: point Of Sale Information. emv. chip Validation Result$
- SCMP API Field: emv_reply_chip_validation_results
- $\bullet \ Simple \ Order \ API \ Field: emvReply_chipValidationResults$

pointOfSaleInformation.emv.chipValidationType

Entity or service that provided the validation results returned in the **pointOfSaleInformation.emv.chipValidationResult** field.

Possible values:

- 02: Mastercard pre-validation service. The Mastercard authorization platform validated the cryptogram before the issuer received the authorization request.
- 03: Mastercard stand-in service. The Mastercard authorization platform validated the cryptogram because the issuer was not available.
- 50: Issuer.
- 90: Chip fall-back transaction downgrade process. The chip could not be read.

This field is returned only for Mastercard near-field communication (NFC) authorizations that use payment network tokens on Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: pointOfSaleInformation.emv.chipValidationType
- SCMP API Field: emv_reply_chip_validation_type

 $\bullet \ Simple \ Order \ API \ Field: emvReply_chipValidation Type$

pointOfSaleInformation.emv.fallback

Indicates that a fallback method was used to enter payment card information into the POS terminal.

When a technical problem prevents a successful exchange of information between a chip card and a chip-capable terminal:

- 1. Swipe the card or key the payment card information into the POS terminal.
- 2. Use the **pointOfSaleInformation.emv.fallback** field to indicate whether the information was swiped or keyed.

Possible values:

- Y: Fallback method was used
- N (default): Fallback method was not used

This field is supported on American Express Direct, Chase Paymentech Solutions, FDC Nashville Global, GPN, JCN Gateway, OmniPay Direct, and SIX.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 5

- REST API Field: pointOfSaleInformation.emv.fallback
- SCMP API Field: emv_request_fallback

• Simple Order API Field: emvRequest_fallback

pointOfSaleInformation.emv.fallbackCondition

Reason for the EMV fallback transaction.

An EMV fallback transaction occurs when an EMV transaction fails for one of these reasons:

- Technical failure: the EMV terminal or EMV card cannot read and process chip data.
- Empty candidate list failure: the EMV terminal does not have any applications in common with the EMV card. EMV terminals are coded to determine whether the terminal and EMV card have any applications in common. EMV terminals provide this information to you.

Possible values:

- 1: Transaction was initiated with information from a magnetic stripe, and the previous transaction at the EMV terminal either used information from a successful chip read or it was not a chip transaction.
- 2: Transaction was initiated with information from a magnetic stripe, and the previous transaction at the EMV terminal was an EMV fallback transaction because the attempted chip read was unsuccessful.

This field is supported on JCN Gateway and GPN.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- $\bullet \ REST \ API \ Field: point Of Sale Information. emv. fall back Condition$
- $\bullet \, SCMP \, API \, Field: emv_request_fallback_condition$
- $\bullet \ Simple \ Order \ API \ Field: emvRequest_fallback Condition$

pointOfSaleInformation.emv.tags (request)

EMV data that is transmitted from the chip card to the issuer and from the issuer to the chip card.

The EMV data is in the tag-length-value format and includes chip card tags, terminal tags, and transaction detail tags.

(!) Important:

The following tags contain sensitive information and must not be included in this field:

- 56: Track 1 equivalent data
- 57: Track 2 equivalent data
- 5A: Application PAN
- 5F20: Cardholder name
- 5F24: Application expiration date
- 99: Transaction PIN
- 9F0B: Cardholder name (extended)
- 9F1F: Track 1 discretionary data
- 9F20: Track 2 discretionary data

For information about the individual tags, see the "Application Specification" section in the EMV Specifications.

For captures, this field is required for contact EMV transactions. Otherwise, it is optional.

For credits, this field is required for contact EMV stand-alone credits and contactless EMV standalone credits. Otherwise, it is optional.

(I) Important:

For contact EMV captures, contact EMV stand-alone credits, and contactless EMV stand-alone credits, you must include the following tags in this field. For all other types of EMV transactions, the following tags are optional:

- 95: Terminal verification results
- 9F10: Issuer application data
- 9F26: Application cryptogram

Information in this topic about EMV applies to payment card processing and PIN debit processing. All other information in this topic applies only to payment card processing.

PIN debit processing is available on Visa Platform Connect and FDC Nashville Global.

Visa Platform Connect

Include the following tag for better interchange rates:

• 84: Dedicated file name

The value for Tag 84 corresponds to the following data in the TC 33 capture file:

• Record: CP02 TCR0

• Position: 118-149

• Field: Dedicated File Name - Application ID (AID)

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

Visa Platform Connect

• Field Type: Request

pointOfSaleInformation.encryptedPin

Encrypted PIN.

This value is provided by the client software that is installed on the POS terminal.

This field is supported only for Cybersource integrations and only for processors that support chip and online PIN transactions.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 16

Mapping Information

• REST API Field: pointOfSaleInformation.encryptedPin

• SCMP API Field: pin_data_encrypted_pin

• Simple Order API Field: pinDataEncryptedPIN

pointOfSaleInformation.encryptedKeySerialNumber

Combination of the POS terminal's unique identifier and a transaction counter that is used when decrypting the encrypted PIN.

The entity that injected the PIN encryption keys into the terminal decrypts the encrypted PIN and creates this value.

For all terminals that are using derived unique key per transaction (DUKPT) encryption, this is generated as a single number within the terminal.

This field is supported only for Cybersource integrations and only for processors that support chip and online PIN transactions.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: pointOfSaleInformation.encryptedKeySerialNumber

• SCMP API Field: pin_data_key_serial_number

• Simple Order API Field: pinDataKeySerialNumber

pointOfSaleInformation.entryMode

Method of entering payment card information into the POS terminal.

Possible values:

- contact: Read from direct contact with chip card
- contactless: Read from a contactless interface using chip data
- keyed: Manually keyed into POS terminal.

For card-present transactions, this value is not supported on OmniPay Direct.

For PIN debit transactions, this value is not supported.

• msd: Read from a contactless interface using magnetic stripe data (MSD).

For card-present transactions, this value is not supported on OmniPay Direct.

• swiped: Read from payment card magnetic stripe

The contact, contactless, and msd values are supported only for EMV transactions.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 11

- REST API Field: pointOfSaleInformation.entryMode
- SCMP API Field: pos_entry_mode
- Simple Order API Field: pos_entryMode

pointOfSaleInformation.laneNumber (request)

Identifier for an alternate terminal at your retail location.

You define the value for this field.

This field is supported only for Mastercard transactions on FDC Nashville Global. Use the **pointOfSaleInformation.terminalID** field to identify the main terminal at your retail location. When your retail location has multiple terminals, use the **pointOfSaleInformation.laneNumber** field to identify the terminal used for the transaction.

This field is a *pass-through*, which means that the value is not checked or modified in any way before it is sent to the processor.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 8

- REST API Field: pointOfSaleInformation.laneNumber
- SCMP API Field: terminal_id_alternate
- Simple Order API Field: pos_terminalIDAlternate

pointOfSaleInformation.laneNumber (response)

Identifier for an alternate terminal at your retail location.

You defined the value for this field in the request message. This value must be printed on the receipt.

This field is supported only for Mastercard transactions on FDC Nashville Global.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 8

Mapping Information

• REST API Field: pointOfSaleInformation.laneNumber

• SCMP API Field: terminal_id_alternate

• Simple Order API Field: pos_terminalIDAlternate

pointOfSaleInformation.operatingEnvironment

Operating environment.

This field is supported only on American Express Direct and Visa Platform Connect.

Possible values for Mastercard:

- 2: On merchant premises, unattended, or customer terminal. Examples: oil, kiosks, self-checkout, home computer, mobile telephone, personal digital assistant (PDA). Customer terminal is supported only for Mastercard transactions on Visa Platform Connect.
- 4: Off merchant premises, unattended, or customer terminal. Examples: vending machines, ,mobile telephone, personal digital assistant. Customer terminal is supported only for Mastercard transactions on Visa Platform Connect.

Possible values for all card types except Mastercard:

- 0: No terminal used or unknown environment.
- 1: On merchant premises, attended.
- 2: On merchant premises, unattended. Examples: oil, kiosks, self-checkout, mobile telephone, personal digital assistant (PDA).
- 3: Off merchant premises, attended. Examples: portable POS devices at trade shows, at service calls, or in taxis.
- 4: Off merchant premises, unattended. Examples: vending machines, home computer, mobile telephone, PDA.
- 5: On premises of customer, unattended.
- 9: Unknown delivery mode.
- S: Electronic delivery of product. Examples: music, software, or eTickets that are downloaded over the Internet.
- T: Physical delivery of product. Examples: music or software that is delivered by mail or by a courier.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

Mapping Information

• REST API Field: pointOfSaleInformation.operatingEnvironment

• SCMP API Field: pos_environment

• Simple Order API Field: pos_environment

pointOfSaleInformation.partnerSdkVersion

Version of the software installed on the POS terminal.

This value is provided by the client software that is installed on the POS terminal.

This value is not sent to the processor. Instead, the value is forwarded to the Cybersource reporting software.

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 32

Mapping Information

• REST API Field: pointOfSaleInformation.partnerSdkVersion

• SCMP API Field: partner_sdk_version

• Simple Order API Field: partnerSDKversion

point Of Sale Information. store And Forward Indicator

When connectivity is unavailable, the client software that is installed on the POS terminal can store a transaction in its memory and send it for authorization when connectivity is restored.

This value is provided by the client software that is installed on the POS terminal.

This value is not sent to the processor. Instead, the value is forwarded to the Cybersource reporting software.

Possible values:

- Y: Transaction was stored and then forwarded.
- N (default): Transaction was not stored and then forwarded.

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 5

- REST API Field: pointOfSaleInformation.storeAndForwardIndicator
- SCMP API Field: store_and_forward_indicator

 $\bullet \ Simple \ Order \ API \ Field: pos_store And Forward Indicator$

pointOfSaleInformation.terminalCapability

POS terminal's capability.

Possible values:

- 1: Terminal has a magnetic stripe reader only.
- 2: Terminal has a magnetic stripe reader and manual entry capability.
- 3: Terminal has manual entry capability only.
- 4: Terminal can read chip cards.
- 5: Terminal can read contactless chip cards; cannot use contact to read chip cards.

For an EMV transaction, the value of this field must be a 4 or 5.

Specifications

• Field Type: Request

• Data Type: Integer

 $\bullet \ \mathbf{Data} \ \mathbf{Length:} \ 1$

- REST API Field: pointOfSaleInformation.terminalCapability
- SCMP API Field: terminal_capability

• Simple Order API Field: pos_terminalCapability

pointOfSaleInformation.terminalCardCaptureCapability

Indicates whether the terminal can capture the card.

Possible values:

- 1: Terminal can capture card.
- 0: Terminal cannot capture card.

This field is supported only for Cybersource integrations. This field is not supported for FDC Nashville Global or SIX processors.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: pointOfSaleInformation.terminalCardCaptureCapability
- SCMP API Field: terminal_card_capture_capability
- Simple Order API Field: pos_terminalCardCaptureCapability

pointOfSaleInformation.terminalCompliance

Flag that indicates whether the terminal is compliant with standards mandated by the Reserve Bank of India for card-present domestic transactions in India.

Format:

- First character indicates whether the terminal supports terminal line encryption (TLE). Possible values:
 - 1: Not certified
 - 2: Certified
- Second character indicates whether the terminal supports Unique Key Per Transaction (UKPT) and Derived Unique Key Per Transaction (DUKPT). Possible values:
 - 1: Not certified
 - 2: Certified

Example: 21 indicates that the terminal supports TLE but does not support UKPT/DUKPT.

You and the terminal vendors are responsible for terminal certification. If you have questions, contact your acquirer.

Visa Platform Connect

This field is supported only for Mastercard transactions on Visa Platform Connect.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 92-93

• Field: Mastercard Terminal Compliance Indicator

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

Mapping Information

• REST API Field: pointOfSaleInformation.terminalCompliance

• SCMP API Field: terminal_compliance

• Simple Order API Field: pos_terminalCompliance

pointOfSaleInformation.terminalID (request)

Identifier for the terminal at your retail location.

You can define this value yourself, but consult the processor for requirements.

FDC Nashville Global

To have your account configured to support this field, contact customer support. This value must be a value that FDC Nashville Global issued to you.

Visa Platform Connect

A list of all possible values is stored in your account. When terminal ID validation is enabled for your account, the value you send for this field is validated against the list each time you include the field in a request. To enable or disable terminal ID validation, contact customer support.

When you do not include this field in a request, the default value in your account is used.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 8

Mapping Information

• REST API Field: pointOfSaleInformation.terminalID

• SCMP API Field: terminal_id

• Simple Order API Field: pos_terminalID

pointOfSaleInformation.terminalID (response)

Terminal identifier assigned by the acquirer.

This value must be printed on the receipt.

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 8

Mapping Information

• REST API Field: pointOfSaleInformation.terminalID

• SCMP API Field: terminal_id

 $\bullet \ Simple \ Order \ API \ Field: pos_terminal ID$

pointOfSaleInformation.terminalInputCapability[]

Complete list of card input methods supported by the terminal.

Possible values:

- Keyed: Terminal can accept card data that is entered manually.
- Swiped: Terminal can accept card data from a magnetic stripe reader.
- Contact:: Terminal can accept card data in EMV contact mode.
- Contactless:: Terminal can accept card data in EMV contactless mode.
- BarCode:: Terminal can read bar codes.
- QRcode:: Terminal can read QR codes.
- OCR:: Terminal can perform optical character recognition (OCR).

This field is supported only for Cybersource integrations.

Specifications

• Data Length: 15

- $\bullet \ REST \ API \ Field: point Of Sale Information. terminal Input Capability []$
- $\bullet \ SCMP \ API \ Field: terminal_input_capabilities_\#$
- $\bullet \ Simple \ Order \ API \ Field: pos_terminal Input Capabilities_\#$

pointOfSaleInformation.terminalOutputCapability

Indicates whether the terminal can print or display messages.

Possible values:

- 1: Neither
- 2: Print only
- 3: Display only
- 4: Print and display

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: pointOfSaleInformation.terminalOutputCapability
- SCMP API Field: terminal_output_capability

• Simple Order API Field: pos_terminalOutputCapability

pointOfSaleInformation.terminalPinCapability

Maximum PIN length that the terminal can capture.

Possible values:

- O: No PIN capture capability
- 1: PIN capture capability unknown
- 4: Four characters
- 5: Five characters
- 6: Six characters
- 7: Seven characters
- 8: Eight characters
- 9: Nine characters
- 10: Ten characters
- 11: Eleven characters
- 12: Twelve characters

This field is supported only for Cybersource integrations.

Specifications

• Data Type: Integer

• Data Length: 2

- REST API Field: pointOfSaleInformation.terminalPinCapability
- $\bullet \ SCMP \ API \ Field: terminal_pin_capability$
- Simple Order API Field: pos_terminalPINcapability

pointOfSaleInformation.terminalSerialNumber

Terminal serial number assigned by the hardware manufacturer.

This value is provided by the client software that is installed on the POS terminal.

This value is not sent to the processor. Instead, the value is forwarded to the Cybersource reporting software.

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 32

- REST API Field: pointOfSaleInformation.terminalSerialNumber
- SCMP API Field: terminal_serial_number
- Simple Order API Field: pos_terminalSerialNumber

pointOfSaleInformation.trackData

For card-present transactions, this field applies to the card's track 1 and 2 data. For PIN debit transactions, this field applies to track 2 data from the debit card; the sentinels are required.

Card-present Transactions

For FDMS Nashville, this value consists of one of the following:

- Track 1 data
- Data for both tracks 1 and 2

Example:

PIN Debit Transactions

Example:

;411111111111111=16121019761186800000?

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 119

Mapping Information

• REST API Field: pointOfSaleInformation.trackData

• SCMP API Field: track_data

• Simple Order API Field: pos_trackData

processingInformation.authorizationOptions.balanceInquiry

Flag that specifies whether to return balance information.

Possible values:

- true: Return balance information.
- false: Do not return balance information.

Specifications

- Field Type: Request
- Data Type: Boolean

- REST API Field: processingInformation.authorizationOptions.balanceInquiry
- SCMP API Field: balance_inquiry
- Simple Order API Field: balanceInquiry

processingInformation.authorizationOptions.billPaymentType

Reason for the payment.

Possible values:

- 001: Utility payment.
- 002: Government services.
- 003: Mobile phone top-up.
- 004: Coupon payment.

This field is supported only for bill payments in Brazil with Mastercard on Visa Platform Connect.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR0

• Position: 48-50

• Field: Bill Payment Transaction Type Identifier

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

- $\bullet \ REST\ API\ Field: processing Information. authorization Options. bill Payment Type$
- SCMP API Field: bill_payment_type
- Simple Order API Field: billPaymentType

processingInformation.japanPaymentOptions.businessNameAlphaNumeric

Business name in alphanumeric characters.

This field is supported only on JCN Gateway and for the Sumitomo Mitsui Card Co. acquirer on Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 25

- REST API Field: processingInformation.japanPaymentOptions.businessNameAlphaNumeric
- SCMP API Field: jpo_business_name_alphanumeric
- Simple Order API Field: jpo_businessNameAlphanumeric

processing Information. authorization Options. aft Indicator

Indicates whether the transaction is an AFT transaction.

Possible values:

- true: This is an AFT transaction.
- false (default): This is not an AFT transaction.

Specifications

- Field Type: Request
- Data Type: String
- Data Length: 5

- REST API Field: processingInformation.authorizationOptions.aftIndicator
- SCMP API Field: aft_indicator
- Simple Order API Field: aft_indicator

processingInformation.authorizationOptions.authType

Authorization type.

Possible values:

- AUTOCAPTURE: Automatic capture.
- STANDARDCAPTURE: Standard capture.
- verbal: Forced capture or verbal authorization.

Automatic Capture and Standard Capture

To request an automatic capture if your account is not configured for automatic captures, set this field to AUTOCAPTURE and include it in a bundled authorization and capture request.

To override an automatic capture and request a standard capture if your account is configured for automatic captures, set this field to STANDARDCAPTURE and include it in a standard authorization or bundled authorization and capture request.

Forced Capture

A forced capture occurs when you process an authorization outside the Cybersourcesystem but then capture the order through Cybersource. To indicate that you are performing a forced capture, set this field to verbal and include it in a bundled authorization and capture request along with other fields required for a forced capture.

Verbal Authorization

When you request an authorization through Cybersource, the issuing bank might ask you to call the payment processor to answer questions about the transaction. When this happens, the processor gives you a verbal authorization code for the transaction. To indicate that you are capturing a verbal authorization, set this field to verbal and include it in a capture request along with other fields required for a verbal authorization.

Specifications

Automatic Capture and Standard Capture:

• Field Type: Request

• Data Type: String

• Data Length: 15

Forced Capture and Verbal Authorization:

• Field Type: Request

• Data Type: String

• Data Length: 11

- REST API Field: processingInformation.authorizationOptions.authType
- SCMP API Field: auth_type
- Simple Order API Fields:
 - ccAuthService_authType
 - ccCaptureService_authType

processingInformation.authorizationOptions.billPayment

Indicates payment for bill or payment towards existing contractual loan.

For Visa card types only.

- Authorization service: Flag that specifies whether this payment is for a bill or for an existing contractual loan. This value is case sensitive. Possible values:
 - true: Visa bill payment or loan payment.
 - false (default): Not a Visa bill payment or loan payment.
- Capture service: Flag that specifies whether this is a credit for a bill that the customer paid with a Visa card. Possible values:
 - true: Credit for a Visa bill payment.
 - false (default): Not a credit for a Visa bill payment.

Specifications

• Field Type: Request

• Data Type: Boolean

- REST API Field: processingInformation.authorizationOptions.billPayment
- SCMP API Field: bill_payment
- Simple Order API Fields:
 - For Card-Not-Present and Card-Present Transactions: ccAuthService_billPayment

 $\circ \ For \ Card\text{-Not-Present Transactions Only: } \textbf{ccCreditService_billPayment}$

processing Information. authorization Options. decline Avs Flags

List of AVS codes that cause the request to be declined for AVS reasons.

Use a space to separate the values in the list.

(1) **Important:** To receive declines for the AVS code N, include the value N in the list.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

- REST API Field: processingInformation.authorizationOptions.declineAvsFlags
- SCMP API Field: decline_avs_flags
- Simple Order API Field: businessRules_declineAVSFlags

processing Information. authorization Options. ignore Avs Result

Flag for a sale request that specifies whether to allow the capture service to run even when the authorization receives an AVS decline.

An AVS decline is indicated by a response flag value of DAVSNO.

Possible values:

- true: Ignore the results of AVS checking and run the capture service.
- false (default): If the authorization receives an AVS decline, do not run the capture service.

When the value of this field is true, the list in the **processingInformation.authorizationOptions.declineAvsFlags** field is ignored.

Specifications

• Field Type: Request

• Data Type: Boolean

- REST API Field: processingInformation.authorizationOptions.ignoreAvsResult
- SCMP API Field: ignore_avs
- Simple Order API Field: businessRules_ignoreAVSResult

processingInformation.authorizationOptions.ignoreCvResult

Flag for a sale request that specifies whether to allow the capture service to run even when the authorization receives a CVN decline.

A CVN decline is indicated by a **processorInformation.cardVerification.resultCode** value of **D** or **N**.

Possible values:

- true: Ignore the results of CVN checking and run the capture service.
- false (default): If the authorization receives a CVN decline, do not run the capture service.

Specifications

• Field Type: Request

• Data Type: String

- REST API Field: processingInformation.authorizationOptions.ignoreCvResult
- SCMP API Field: ignore_bad_cv
- Simple Order API Field: businessRules_ignoreCVResult

processing Information. authorization Options. in itiator. credential Stored On File

Indicates whether the customer initiated the transaction and whether the credentials are stored for future authorizations.

Future authorizations that use the stored credentials can be merchant-initiated transactions or credentials-on-file transactions.

Possible values:

- true: Credentials are stored for future authorizations.
- false: Credentials are not stored for future authorizations.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR1

• Position: 136

• Field: POS Environment

Specifications

• Field Type: Request

• Data Type: String

Mapping Information

 $\bullet \ REST\ API\ Field: processing Information. authorization Options. in it iator. credential Stored On File$

- SCMP API Field: subsequent_auth_first
- Simple Order API Field: subsequentAuthFirst

processingInformation.authorizationOptions.initiator.merchantInitiatedTransaction.originalAuthorizedAmount

Amount of the original authorization.

This field is supported only for the following kinds of transactions with Discover:

- Merchant-initiated transactions.
- Recurring payments on FDC Nashville Global that use payment network tokens.
- Subsequent authorizations on FDC Nashville Global and Streamline.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 60

- REST API Field: processingInformation.authorizationOptions.initiator.merchantInitiatedTransaction.originalAuthorizedAmount
- SCMP API Field: subsequent_auth_original_amount
- Simple Order API Field: subsequentAuthOriginalAmount

processing Information. authorization Options. in it iator. merchant Initiated Transaction. previous Transaction ID

Network transaction identifier that was returned for a previous authorization in the series.

This field is supported only for:

- Merchant-initiated transactions.
- Installment payments on FDI Australia.

The value for this field was returned in the **processorInformation.transactionID** field in the response message for either the original authorization in the series or the previous authorization in the series.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

- $\bullet \ REST \ API \ Field: processing Information. authorization Options. in it ia tor. merchant Initiated Transaction. previous Transaction ID$
- SCMP API Field: subsequent_auth_transaction_id
- Simple Order API Field: subsequentAuthTransactionID

processing Information. authorization Options. in it iator. merchant Initiated Transaction. reason

Reason for the merchant-initiated transaction or incremental authorization.

This field is supported only for:

- The five kinds of merchant-initiated transactions in the following list.
- Incremental authorization service.

This field is supported only for the five kinds of merchant-initiated transactions in the following list.

Possible values:

- 1: Resubmission.
- 2: Delayed charge.
- 3: Reauthorization for split shipment.
- 4: No show.
- 5: Incremental authorization.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR0

• Position: 160-163

• Field: Message Reason Code

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

Mapping Information

 $\bullet \ REST\ API\ Field: processing Information. authorization Options. in it is a torum erchant Initiated Transaction. reason$

• SCMP API Field: subsequent_auth_reason

• Simple Order API Field: subsequentAuthReason

processing Information. authorization Options. in it iator. stored Credential Used

Indicates whether you obtained the payment information from credentials on file (COF) instead of from the customer.

Possible values:

- true: Transaction uses COF.
- false: Transaction does not use COF.

When you use the Token Management Service, this field is set to true for you.

Specifications

• Field Type: Request

• Data Type: Boolean

- $\bullet \ REST\ API\ Field: processing Information. authorization Options. in it iator. stored Credential Used$
- SCMP API Field: subsequent_auth_stored_credential
- Simple Order API Field: subsequentAuthStoredCredential

processingInformation.authorizationOptions.initiator.type

Indicates whether the transaction is a merchant-initiated transactionor subsequent authorization. This field is supported only for:

- Merchant-initiated transactions.
- Subsequent authorizations on FDC Nashville Global and Streamline.

This field is supported only for merchant-initiated transactions.

Possible values:

- merchant: Merchant-initiated transactionor subsequent authorization.
- customer: Not a merchant-initiated transaction or subsequent authorization.

Visa Platform Connect

The value for this field does not correspond to any data in the TC 33 capture file.

Specifications

• Field Type: Request

• Data Type: String

Mapping Information

• REST API Field: processingInformation.authorizationOptions.initiator.type

- SCMP API Field: subsequent_auth
- Simple Order API Field: subsequentAuth

processing Information. authorization Options. partial Auth Indicator

Flag that indicates whether the transaction is enabled for partial authorization.

When the request includes this field, this value overrides the information in your account.

Possible values:

- true: Enable the transaction for partial authorization.
- false: Do not enable the transaction for partial authorization.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 5

- $\bullet \ REST\ API\ Field: processing Information. authorization Options. partial Auth Indicator$
- SCMP API Field: pin_debit_purchase_partial_auth_indicator
- Simple Order API Field: pinDebitPurchaseService_partialAuthIndicator

processing Information. authorization Options. verbal Auth Code

Authorization code.

Authorization Service

Authorization code you received from an authorization that you performed outside the system.

Capture Service

Authorization code that you received verbally.

Specifications

• Authorization:

• Field Type: Request

• Data Type: String

• **Data Length:** 6

• Capture:

JCN Gateway:

Field Type: Request

Data Type: String

Data Length: 7

• All other processors:

Field Type: Request

Data Type: String

Data Length: 6

- $\bullet \ REST\ API\ Field: processing Information. authorization Options. verbal Auth Code$
- SCMP API Field: auth_code
- Simple Order API Fields:
 - ccAuthService_verbalAuthCode
 - ccCaptureService_verbalAuthCode

processing Information. authorization Options. verbal Auth Code

Authorization code for an EBT voucher transaction.

This code is provided by the issuer to you over the phone.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 6

- REST API Field: processingInformation.authorizationOptions.verbalAuthCode
- SCMP API Field: pin_debit_purchase_authorization_code
- Simple Order API Field: pinDebitPurchaseService_authorizationCode

processing Information. authorization Options. verbal Auth Transaction Id

Transaction ID (TID).

This field is supported only for the American Express card type on American Express Direct and FDMS South.

This field enables you to comply with American Express CAPN requirements.

Forced Capture

Obtain the value for this field from the authorization response.

Verbal Authorization

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

- REST API Field: processingInformation.authorizationOptions.verbalAuthTransactionId
- SCMP API Field: bill_transaction_id

 $\bullet \ Simple \ Order \ API \ Field: cc Capture Service_transaction ID$

processingInformation.businessApplicationId

Type of transaction.

This field is a *pass-through*, which means that the value is not verified or modified in any way before it is sent to the processor.

You can provide a business application ID in this field or in your account. When a request includes this field, the value in the field overrides the information in your account. Call customer support to update your account information.

Possible values for non-Payouts transactions:

- AA: Account to account.
- BB: Business to business.
- BI: Bank-initiated money transfer.
- BP: Non-card bill payment.
- CC: Cash claim.
- CI: Cash in.
- CO: Cash out.
- CP: Card bill payment.
- FD: Funds disbursement (general), including:
 - Commission payments
 - Digital goods or games
 - ${}^{\circ}\ Insurance\ payments$

- Loan disbursements
- Lottery payouts
- Shared economy
- Non-government-initiated tax refund services such as tax preparation businesses
- GD: Government disbursement, including:
 - Government-initiated tax refunds
 - Government benefit and welfare disbursements
- GP: Gambling payout other than online gambling.
- LO: Loyalty credits and rebates (not supported in European systems).
- MA: Mobile air time payment.
- MD: Merchant disbursement (acquirers or aggregators settling to merchants).
- MI: Merchant-initiated money transfer.
- MP: Face-to-face merchant payment.
- OG: Online gambling payout.
- PD: Payroll pension disbursement.
- PG: Payment to government.
- PP: Person to person.
- PS: Payment for goods and services (general).
- TU: Top-up for enhanced prepaid loads.
- WT: Wallet transfer.

Payouts on Barclays, FDC Compass, and Visa Platform Connect

Possible values:

- BB: Business to business.
- FD: Funds disbursement (general), including:
 - Commission payments
 - Digital goods or games
 - Insurance payments
 - Loan disbursements
 - Lottery payouts
 - Shared economy
 - Non-government-initiated tax refund services such as tax preparation businesses
- GD: Government disbursement, including:
 - Government-initiated tax refunds
 - Government benefit and welfare disbursements
- GP: Gambling payout other than online gambling.
- LO: Loyalty credits and rebates (not supported in European systems).
- MD: Merchant disbursement (acquirers or aggregators settling to merchants).
- OG: Online gambling payout.
- PD: Payroll pension disbursement.
- WT: Wallet transfer.

Payouts on Chase Paymentech Solutions

Possible values:

- PP: Person to person.
- WT: Wallet transfer.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

- Record: CP01 TCR8
- Position: 108-109
- Field: Business Application Identifier (BAI)

Specifications

- Field Type: Request
- Data Type: String
- Data Length: 2

- REST API Field: processingInformation.businessApplicationId
- SCMP API Field: business_application_id
- Simple Order API Field: invoiceHeader_businessApplicationID

processingInformation.captureOptions.captureSequenceNumber

Capture number when requesting multiple partial captures for one authorization.

This value is used along with **processingInformation.captureOptions.totalCaptureCount** to track which capture is being processed.

Example: These are the values for the second of five captures:

processingInformation.captureOptions.captureSequenceNumber=2
processingInformation.captureOptions.totalCaptureCount=5

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 158-159

• Field: Clearing Sequence Number

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

- $\bullet \ REST\ API\ Field: processing Information. capture Options. capture Sequence Number$
- SCMP API Field: capture_sequence
- Simple Order API Field: ccCaptureService_sequence

processing Information. capture Options. date To Capture

Date on which the customer initiated a contactless transit transaction.

This field is supported only for mass transit transactions.

Format: MMDD

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 4

- REST API Field: processingInformation.captureOptions.dateToCapture
- SCMP API Field: auth_capture_date
- Simple Order API Field: ccAuthService_captureDate

processingInformation.captureOptions.totalCaptureCount

Total number of captures when requesting multiple partial captures for one authorization.

This value is used along with **processingInformation.captureOptions.captureSequenceNumber** to track which capture is being processed.

Example: These are the values for the second of five captures:

processingInformation.captureOptions.captureSequenceNumber=2
processingInformation.captureOptions.totalCaptureCount=5

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 160-161

• Field: Clearing Sequence Count

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 2

- $\bullet \ REST \ API \ Field: processing Information. capture Options. total Capture Count$
- SCMP API Field: capture_total_count
- Simple Order API Field: ccCaptureService_totalCount

processing Information. commerce Indicator

Type of transaction.

Some payment card companies use this information when determining discount rates.

Possible Values for the Authorization Service:

E-commerce Indicator Values

Value	Description
aesk	American Express SafeKey authentication was successful.
aesk attempted	American Express SafeKey authentication was attempted but did not succeed.
dipd	Discover card type.
install	Installment payment.
install_internet	Non-U.S. e-commerce (Internet) installment payment.
internet	Default value for authorizations. E-commerce order placed using a website. On Ingenico ePayments, this value is supported only for Carte Bancaires.
js	JCB J/Secure authentication was successful.
js_attempted	JCB J/Secure authentication was attempted but did not succeed.
moto	Mail order or telephone order. On Ingenico ePayments, this value is supported only for Cartes Bancaires.
moto_cc	Mail order or telephone order from a call center.
pb	ProtectBuy authentication was successful.
pb_attempted	ProtectBuy authentication was attempted but did not succeed.
recurring	Recurring payment that is a U.S. transaction or non-U.S. mail order/telephone order (MOTO) transaction.

E-commerce Indicator Values (continued)

Value	Description
recurring_internet	Recurring payment that is a non-U.S. e-commerce (Internet) transaction.
retail	Card-present transaction.
rpy	RuPay PaySecure authentication was successful
spa	• For Mastercard Identity Check: Authentication was successful or was attempted but did not succeed. The e-commerce indicator for all Mastercard Identity Check transactions, including authentication attempts, must be set to spa. Otherwise, the transactions are processed as non-Identity Check transactions.
	• For secure transactions for Credit Mutuel-CIC: Authentication was successful for a co-badged Mastercard and Cartes Bancaires card.
spa_failure	Authentication for a co-badged Mastercard and Cartes Bancaires card was attempted but did not succeed.
	• For Mastercard Identity Check: Authentication failed.
	• For secure transactions for Credit Mutuel-CIC: Authentication failed for a co-badged Mastercard and Cartes Bancaires card.
vbv	For Visa Secure: Authentication was successful. For secure transactions for Credit Mutuel-CIC: Authentication was successful for a co-badged Visa and Cartes Bancaires card.
vbv_attempted	For Visa Secure: Authentication was attempted but did not succeed. For secure transactions for Credit Mutuel-CIC: Authentication for a co-badged Visa and Cartes Bancaires card was attempted but did not succeed.
vbv_failure	For Visa Secure: Authentication failed. For secure transactions for Credit Mutuel-CIC: Authentication failed for a co-badged Visa and Cartes Bancaires card.

Possible Values for the Credit Service:

- internet: E-commerce order placed through a website. On Ingenico ePayments, this value is supported only for Cartes Bancaires.
- moto: Mail order or telephone order. Not supported on Cielo or UATP. On Ingenico ePayments, this value is supported only for Cartes Bancaires.
- recurring: Recurring payment that is a U.S. transaction or non-U.S. mail order / telephone order (MOTO) transaction.
- recurring_internet: Recurring payment that is a non-U.S. e-commerce (Internet) transaction.

Apple Pay

For the merchant decryption method, one of the following values is required: aesk, dipb, internet, spa, vbv.

Ingenico ePayments

When you omit this field on Ingenico ePayments, the processor uses the default transaction type that they have on file for you.

Card-Present Transactions

For a card-present transaction, you must set this field to retail.

Payer Authentication

When you request the payer authentication and authorization services separately, get the value for this field from the **processingInformation.commerceIndicator** response field.

Payouts

For Chase Paymentech Solutions, the value for an account funding transaction (AFT) and original credit transaction (OCT) is internet.

Payouts

For FDC Compass and Visa Platform Connect, the value for an original credit transaction (OCT) is internet.

PIN Debit Transactions

For a PIN debit transaction, you must set this field to retail.

Samsung Pay

For the merchant decryption method, one of the following values is required: aesk, internet, spa.

Specifications

- Field Type: Request
- Data Type: String
- Data Length:
 - Account funding transaction (AFT): 20
 - Card-not-present transaction: 20
 - $\,{}^{\circ}$ Card-present transaction: 20 $\,$
 - Original credit transaction (OCT): 13
 - PIN debit transaction: 13

- REST API Field: processingInformation.commerceIndicator
- SCMP API Field: e_commerce_indicator
- Simple Order API Fields:
 - $^{\circ} \ ccAuth Service_commerce Indicator \\$
 - $^{\circ}$ ccCreditService_commerceIndicator
 - \circ octService_commerceIndicator
 - $^{\circ}~pinDebitCreditService_commerceIndicator\\$
 - $^{\circ}~pinDebitPurchaseService_commerceIndicator$

processingInformation.electronicBeniftsTransfer.category

Flag that specifies the category for the EBT transaction.

Possible values:

- cash: Cash benefits, which can be used to purchase any item at a participating retailer, as well as to obtain cash-back or make a cash withdrawal from a participating ATM.
- food: Food stamp benefits, which can be used only to purchase food items authorized by the USDA SNAP program.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 4

- REST API Field: processingInformation.electronicBeniftsTransfer.category
- SCMP API Field: pin_debit_ebt_category
- Simple Order API Fields:
 - pinDebitPurchaseService_ebtCategory
 - pinDebitCreditService_ebtCategory

processing Information. electronic Benifts Transfer. voucher Serial Number

The serial number printed on the EBT voucher.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 15

- $\bullet \ REST\ API\ Field: processing Information. electronic Benifts Transfer. voucher Serial Number$
- SCMP API Field: pin_debit_ebt_voucher_serial_number
- Simple Order API Field: pinDebitPurchaseService_ebtVoucherSerialNumber

processingInformation.extendedCreditTotalCount

Number of months over which the cardholder can pay for the purchase.

You can use this field when offering extended credit to a cardholder at a retail location. The cardholder provides this value. The issuer pays you for the purchase in one payment, and then the cardholder pays the issuer in the number of monthly payments specified by this value.

This field is supported only for acquirers in South Africa using Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- $\bullet \ REST \ API \ Field: processing Information. extended Credit Total Count$
- SCMP API Field: extended_credit_total_count
- Simple Order API Field: extendedCreditTotalCount

processingInformation.industryDataType

Indicates whether the transaction includes industry data.

For certain industries, you must set this field to an industry data value to be sent to the processor. When this field is not set to an industry value or is not included in the request, industry data does not go to the processor.

Documentation for Industry-Specific Processing

Industry	Documentation
airline	
auto_rental	Auto Processing guide (contact customer support)
healthcare_medical	Healthcare Processing guide (contact customer support)
healthcare_transit	Healthcare Processing guide (contact customer support)
lodging	Lodging Processing guide (contact customer support)
restaurant	
transit	

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

- $\bullet \ REST \ API \ Field: processing Information. industry Data Type$
- SCMP API Field: industry_datatype
- Simple Order API Fields:
 - $^{\circ}\ ccAuth Service_industry Datatype$
 - ${}^{\circ}\: ccCaptureService_industryDatatype$
 - ${}^{\circ}\: ccCreditService_industryDatatype$

processing Information. is suer. discretionary Data

Data defined by the issuer.

This field is supported only for Visa and Mastercard on Visa Platform Connect.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP08 TCR1

• Position: 9-168

• Field: Free Form Text

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 255

(I) Important: For an authorization, the maximum length for this value is 255 characters. In the capture file, the value is truncated at 161 characters.

- REST API Field: issuerInformation.discretionaryData and processingInformation.issuer.discretionaryData
- SCMP API Field: issuer_additional_data

• Simple Order API Field: issuer_additionalData

processing Information. japan Payment Options. business Name

Business name in Japanese characters.

This field is supported only on JCN Gateway and for the Sumitomo Mitsui Card Co. acquirer on Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 25

Mapping Information

• REST API Field: processingInformation.japanPaymentOptions.businessName

• SCMP API Field: jpo_business_name_japanese

• Simple Order API Field: jpo_businessNameJapanese

processing Information. japan Payment Options. business Name Katakana

Business name in Katakana characters.

This field is supported only on JCN Gateway and for the Sumitomo Mitsui Card Co. acquirer on Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 25

Mapping Information

• REST API Field: processingInformation.japanPaymentOptions.businessNameKatakana

• SCMP API Field: jpo_business_name_katakana

• Simple Order API Field: jpo_businessNameKatakana

processingInformation.japanPaymentOptions.firstBillingMonth

First billing month for a transaction that uses installment payments.

This field is supported only on JCN Gateway and for the Sumitomo Mitsui Card Co. acquirer on Visa Platform Connect.

Possible values: 01 through 12.

When you do not include this field in a request that uses installment payments for one of the Japanese payment options, the first billing month is set to the calendar month that follows the transaction date.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

- REST API Field: processingInformation.japanPaymentOptions.firstBillingMonth
- SCMP API Field: jpo_first_billing_month
- Simple Order API Field: jpo_firstBillingMonth

processingInformation.japanPaymentOptions.installments

Number of installment payments.

This field is supported only on JCN Gateway and for the Sumitomo Mitsui Card Co. acquirer on Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: processingInformation.japanPaymentOptions.installments

• SCMP API Field: jpo_installments

• Simple Order API Field: jpo_installments

processing Information. japan Payment Options. jis 2 Track Data

Japanese Industrial Standard Type 2 (JIS2) track data from the front of the card.

This field is supported only on JCN Gateway and Visa Platform Connect.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 69

- REST API Field: processingInformation.japanPaymentOptions.jis2TrackData
- SCMP API Field: jpo_jis2_track_data
- Simple Order API Field: jpo_jis2TrackData

processingInformation.japanPaymentOptions.paymentMethod

Type of Japanese payment option.

This field is supported only on JCN Gateway and for the Sumitomo Mitsui Card Co. acquirer on Visa Platform Connect.

Possible values:

This value is a 2-digit code indicating the payment method. Use Payment Method Code value that applies to the transaction.

- 10: One-time payment
- 21, 22, 23, 24: Bonus payment (one-time)
- 61: Installment payment
- 31, 32, 33, 34: Integrated payment (Bonus + Installment)
- 80: Revolving payment

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: processingInformation.japanPaymentOptions.paymentMethod

- SCMP API Field: jpo_payment_method
- Simple Order API Field: jpo_paymentMethod

processingInformation.japanPaymentOptions.terminalId

Unique Japan Credit Card Association (JCCA) terminal identifier that is provided by Cybersource.

The difference between this field and the **pointOfSaleInformation.terminalID** field is that you can define the **pointOfSaleInformation.terminalID** field, but the **processingInformation.japanPaymentOptions.terminalId** field is defined by the JCCA and is used only in Japan.

This field is supported on JCN Gateway and Visa Platform Connect.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 130-142

• Field: Terminal Identification Number

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 13

- REST API Field: processingInformation.japanPaymentOptions.terminalId
- SCMP API Field: jpo_jcca_terminal_id
- $\bullet \ Simple \ Order \ API \ Field: jpo_jcca Terminal ID$

processingInformation.linkId

Value that links the current authorization request to the original authorization request.

This value is used for partial authorizations and split shipments. Set this value to the request ID that was returned in the response message from the original authorization request.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 26

Mapping Information

• REST API Field: processingInformation.linkId

• SCMP API Field: link_to_request

• Simple Order API Field: linkToRequest

processingInformation.loanOptions.assetType

Flag that specifies whether a loan is for a recoverable item or a non-recoverable item.

This field is supported only for BNDES transactions on Visa Platform Connect.

Possible values:

- N: Non-recoverable item.
- R: Recoverable item.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR2

• Position: 26

• Field: Asset Indicator

Specifications

• Field Type: Request

• Data Type: String

 $\bullet \ \mathbf{Data} \ \mathbf{Length:} \ 1$

Mapping Information

• REST API Field: processingInformation.loanOptions.assetType

- SCMP API Field: loan_asset_type
- Simple Order API Field: loan_assetType

processingInformation.loanOptions.type

Type of loan or installment payment plan based on an agreement between you and the issuer.

This field is supported only for these kinds of payments on Visa Platform Connect:

• BINDES transactions

• Installment payments with Mastercard in Brazil

Example: AGRO-CUSTEIO

Example: AGRO-INVEST

Example: BNDES-Type1

Example: CBN

Example: FINAME

For BNDES transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR2

• Position: 27-46

• Field: Loan Type

For installment payments with Mastercard in Brazil, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP07 TCR4

• Position: 5-24

• Field: Financing Type

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: processingInformation.loanOptions.type

• SCMP API Field: loan_type

• Simple Order API Field: loan_type

processingInformation.mobileRemotePaymentType

Type of payment initiated from a cardholder's mobile device.

This field is supported only for Mastercard transactions on Visa Platform Connect.

Possible values:

- 1: Customer-initiated remote purchase, face-to-face
- 2: Customer-initiated remote purchase, e-commerce
- 3: Customer-initiated remote purchase, mail order / telephone order
- 4: Customer-initiated bill pay
- 5: Customer-initiated top up
- 6: Customer-initiated cash out
- 7: ATM-triggered or agent-initiated cash out
- 8: Merchant-initiated remote purchase, face-to-face
- 9: Merchant-initiated remote purchase, e-commerce

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

- Record: CP01 TCR6
- Position: 94

• Field: Mastercard Mobile Remote Payment Program Indicator

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

Mapping Information

• REST API Field: processingInformation.mobileRemotePaymentType

• SCMP API Field: mobile_remote_payment_type

• Simple Order API Field: ccAuthService_mobileRemotePaymentType

processing Information. national Net Domestic Data

Supplementary domestic transaction information provided by the acquirer.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 123

(Important: For an authorization, the maximum length for this value is 255 characters. In the capture file, the value is truncated at 161 characters.

- REST API Field: processingInformation.nationalNetDomesticData
- SCMP API Field: national_net_domestic_data
- Simple Order API Field: nationalNetDomesticData

processing Information. network Routing Order

Priority order of the networks through which the transaction will be routed.

(I) Important: This field is supported only for businesses located in the U.S.

Set this value to a series of one-character network codes in your preferred order:

Network	Code
Accel	Е
AFFN	U
Alaska Option	3
CU24	С
Interlink	G
Maestro	8
NETS	P
NYCE	F
Pulse	Н
Shazam	7
Star	M
Visa	V

For example, if the Star network is your first preference and Pulse is your second preference, set this field to a value of MH.

When you do not include this value in your PIN debit request, Cybersource uses the list of network codes from your account.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 30

Mapping Information

• REST API Field: processingInformation.networkRoutingOrder

• SCMP API Field: network_order

• Simple Order API Fields:

- $^{\circ}~pinDebitCreditService_networkOrder$
- $^{\circ}\ pinDebitPurchaseService_networkOrder$

processingInformation.paymentSolution

Type of payment solution that is being used for the transaction.

This unique ID distinguishes digital payment solution transactions and authorizations with payment network tokens on the Cybersource platform for reporting purposes.

Possible values:

- 001: Apple Pay
- 012: Google Pay
- 008: Samsung Pay
- 014: Mastercard credential-on-file (COF) payment network token. Returned in authorizations that use a payment network token associated with a TMS token.
- 015: Visa credential-on-file (COF) payment network token. Returned in authorizations that use a payment network token associated with a TMS token.
- visacheckout: Visa Click to Pay.

Specifications

- Apple Pay, Google Pay, Samsung Pay, Visa payment network tokens, and Mastercard payment network tokens:
 - **Field Type:** Request and Response
 - Data Type: String
 - Data Length: 3
- Visa Click to Pay:
 - Field Type: Request

• **Data Type:** String

∘ **Data Length:** 12

- REST API Field: processingInformation.paymentSolution
- SCMP API Field: payment_solution
- Simple Order API Field: paymentSolution

processingInformation.processorId

Value that identifies the acquirer to use for the transaction.

This value is supported only on Visa Platform Connect.

Contact customer support to get the value for this field.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

- REST API Field: processingInformation.processorId
- SCMP API Field: processor_id
- Simple Order API Field: processorID

processingInformation.purchaseLevel

Flag that indicates the capture or credit request includes Level III data.

Set the value for this field to 3.

• American Express Direct: N/A

• Chase Paymentech Solutions: N/A

• FDC Compass: N/A

• FDC Nashville Global: N/A

• GPN: N/A

• OmniPay Direct: N/A

• RBS WorldPay Atlanta: N/A

• TSYS Acquiring Solutions: N/A

• Visa Platform Connect: N/A

• Worldpay VAPP: N/A

processing Information. purchase Options. type

Flag that indicates an EBT voucher transaction.

Possible value: verbal

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 6

- REST API Field: processingInformation.purchaseOptions.type
- SCMP API Field: pin_debit_transaction_type
- Simple Order API Field: pinDebitPurchaseService_transactionType

processing Information. reconciliation ID

Reference number for the transaction.

You can use this value to reconcile Cybersource reports with processor reports.

This value is not returned for all processors.

Specifications

Atos:

• Field Type: Response

• Data Type: String

• Data Length: 6

- REST API Field: processingInformation.reconciliationID
- SCMP API Field: auth_trans_ref_no
- Simple Order API Field: ccAuthService_reconciliationID

processingInformation.reconciliationId

Reference number that you use to reconcile your Cybersource reports with your processor reports. See Getting Started with the REST API for information about transaction tracking and reconciliation.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 60

Mapping Information

• REST API Field: processingInformation.reconciliationId

• SCMP API Field: oct_trans_ref_no

• Simple Order API Field: octReply_reconciliationID

processingInformation.recurringOptions.firstRecurringPayment

Flag that specifies whether this transaction is the first in a series of recurring payments.

This field is supported only on Atos, FDC Nashville Global, and OmniPay Direct.

Specifications

• Field Type: Request

• Data Type: String

- REST API Field: processingInformation.recurringOptions.firstRecurringPayment
- SCMP API Field: auth_first_recurring_payment
- Simple Order API Field: ccAuthService_firstRecurringPayment

processingInformation.recurringOptions.firstRecurringPayment

Purpose of the authorization.

Possible values:

- 0: Preauthorization.
- 1: Final authorization.

To set the default for this field, contact customer support.

Barclays and Elavon

The default for Barclays and Elavon is 1 (final authorization). To change the default for this field, contact customer support.

Visa Platform Connect

When the value for this field is 0, it corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR0

• Position: 164

• Field: Additional Authorization Indicators

When the value for this field is 1, it does not correspond to any data in the TC 33 capture file.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

Mapping Information

• REST API Field: processingInformation.authorizationOptions.authIndicator

• SCMP API Field: auth_indicator

• Simple Order API Field: authIndicator

processing Information. recurring Options. Ioan Payment

Flag that specifies whether this is a payment towards an existing contractual loan.

Possible values:

• true: Loan payment.

• false (default): Not a loan payment.

Specifications

• Field Type: Request

• Data Type: Boolean

- REST API Field: processingInformation.recurringOptions.loanPayment
- SCMP API Field: debt_indicator
- Simple Order API Field: debtIndicator

processing Information. report Group

Value that you create that enables you to identify a group of transactions.

This field is supported only on Worldpay VAP.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 25

Mapping Information

• REST API Field: processingInformation.reportGroup

• SCMP API Field: report_group

• Simple Order API Field: reportGroup

processing Information. vis a Check out ID

Identifier for a Visa Click to Pay order.

Visa Click to Pay provides a unique order ID for every transaction in the Visa Click to Pay callID field.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 48

Mapping Information

• REST API Field: processingInformation.visaCheckoutID

• SCMP API Field: vc_order_id

• Simple Order API Field: vc_orderID

processorIn formation. payment Account Reference Number

Visa-generated reference number that identifies a transaction for which you provided one of the following:

- Visa primary account number (PAN)
- Visa-generated token for a PAN

This reference number provides a link to the cardholder account and to all transactions for that account.

Visa Platform Connect

For transactions with American Express, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 79-107

• Field: PAR—Payment Account Reference

For Token Management Service transactions, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 79-110

• Field: Payment Account Reference

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 32

Mapping Information

 $\bullet \ REST\ API\ Field: processorInformation.payment Account Reference Number$

• SCMP API Field: payment_account_reference

• Simple Order API Field: paymentAccountReference

processorInformation.amexVerbalAuthReferenceNumber

Referral response number for a verbal authorization.

This field is returned only for FDMS Nashville when using an American Express card.

Give this number to American Express when you call them for a verbal authorization.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 6

- $\bullet \ REST\ API\ Field: processorInformation. a mex Verbal Auth Reference Number$
- SCMP API Field: auth_referral_response_number
- Simple Order API Field: ccAuthReply_referralResponseNumber

Credit authorization code.

This field is returned only when the issuer returns this value and the credit is authorized.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 6

- REST API Field: processorInformation.approvalCode
- SCMP API Field: credit_auth_code
- Simple Order API Field: ccCreditReply_authorizationCode

Authorization code.

This field is returned only when the processor returns this value.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 7

- REST API Field: processorInformation.approvalCode
- SCMP API Field: incremental_auth_code
- Simple Order API Field: ccIncrementalAuthReply_authorizationCode

Authorization code that is returned by the processor.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 6

- REST API Field: processorInformation.approvalCode
- SCMP API Field: pin_debit_credit_authorization_code
- Simple Order API Field: pinDebitCreditReply_authorizationCode

Authorization code that is returned by the processor.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 6

- REST API Field: processorInformation.approvalCode
- SCMP API Field: pin_debit_purchase_authorization_code
- Simple Order API Field: pinDebitPurchaseReply_authorizationCode

processorInformation.authIndicator

Type of authorization that was performed.

This field is not returned for unmarked authorizations. Some processors that support the final authorization indicator do not send this field.

Possible values for all processors except Visa Platform Connect:

- 0: Preauthorization.
- 1: Final authorization.

Visa Platform Connect

Possible value for Visa transactions:

• 0: Authorization for an estimated amount.

Possible values for Mastercard transactions:

- 0: Preauthorization.
- 1: Final authorization.
- 2: Undefined authorization.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- $\bullet \ REST \ API \ Field: processorInformation. authIndicator$
- SCMP API Field: auth_indicator
- Simple Order API Field: authIndicator

processor Information. avs. code

AVS result.

Specifications

• Field Type: Response

• Type: String

• Length: 1

Mapping Information

• REST API Field: processorInformation.avs.code

• SCMP API Field: auth_auth_avs

• Simple Order API Field: ccAuthReply_avsCode

processorIn formation. avs. code Raw

AVS result code sent directly from the processor.

This field is returned only when the processor sends this value.

[] Important: Do not use this value to evaluate the AVS result. Use this value only when debugging your order management system.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 10

Mapping Information

• REST API Field: processorInformation.avs.codeRaw

• SCMP API Field: auth_avs_raw

• Simple Order API Field: ccAuthReply_avsCodeRaw

processorInformation.card.suffix

Last four digits of the customer's account number.

You can use this value on the receipt that you give to the customer.

Card-Not-Present and PIN Debit Transactions

This field is returned only for tokenized transactions.

Card-Present Transactions

This field is returned in the response message when the client software that is installed on the POS terminal uses the Token Management Service (TMS) to retrieve tokenized payment details.

You must contact customer support to have your account enabled to receive these fields in the credit response message.

This field is supported only for Cybersource integrations.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR8

• Position: 85

• Field: American Express last 4 PAN return indicator

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

Mapping Information

• REST API Field: paymentInformation.card.suffix

• SCMP API Field: card_suffix

• Simple Order API Field: card_suffix

processorinformation.card.type

Three-digit value that indicates the card type.

! Important: Provide the card type even when it is optional for your processor and card type. Omitting the card type can cause the transaction to be processed with the wrong card type.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01-TCR1

• Position: 70-71

• Field: Card ID

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

All cards from the issuers below are supported along with Visa and Mastercard. Always use code 065 for all card types.

- BC
- Hana
- Hyundai
- KB Kookmin
- Lotte

- NH Nonghyup
- Samsung
- Shinhan

Possible Values

Each payment method, processor, and acquirer support different card types. See the table of supported processors and card types for the payment method you are implementing.

001: Visa

For all processors except Ingenico ePayments and SIX, the Visa Electron card type is processed the same way that the Visa debit card is processed. Use card type value 001 for Visa Electron.

002: Mastercard and Eurocard

For Eurocard, which is the European regional brand of Mastercard, you must include the card type field in a request for an authorization or stand-alone credit.

003: American Express

004: Discover

005: Diners Club

006: Carte Blanche

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

007: JCB

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

014: EnRoute

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

021: JAL

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

024: Maestro (UK Domestic)

031: Delta

Use this value only for Ingenico ePayments. For other processors, use <u>001</u> for all Visa card types. For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

033: Visa Electron

Use this value only for Ingenico ePayments and SIX. For other processors, use 001 for all Visa card types. For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

034: Dankort

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

036: Cartes Bancaires

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

037: Carta Si

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

039: Encoded account number

This value is supported only on Chase Paymentech Solutions. For this value, you must include the card type field in a request for an authorization or stand-alone credit.

040: UATP

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

042: Maestro (International)

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

050: Hipercard

For this card type on Cielo 3.0, Getnet, or , you must include the card type field in a request for an authorization or stand-alone credit. This card type is not supported on 1.5.

051: Aura

054: Elo

For this card type on Getnet or Rede, you must include the card type field in a request for an authorization or stand-alone credit.

058: Carnet

061: RuPay

062: China UnionPay

065: Korean Domestic Cards

For this card type on Getnet or Rede, you must include the card type field in a request for an authorization or stand-alone credit.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

Mapping Information

• REST API Field: paymentInformation.card.type and paymentInformation.tokenizedCard.type

• SCMP API Field: card_type

• Simple Order API Field: card_cardType

processorIn formation. card Verification. result Code

CVN result code.

CVN Codes

Code	Description
D	The transaction was determined to be suspicious by the issuing bank.
I	The CVN failed the processor's data validation check.
M	The CVN matched.
N	The CVN did not match.
P	The CVN was not processed by the processor for an unspecified reason.
S	The CVN is on the card but was not included in the request.
U	Card verification is not supported by the issuing bank.
X	Card verification is not supported by the payment card company.
1	Card verification is not supported for this processor or card type.
2	An unrecognized result code was returned by the processor for the card verification response.
3	No result code was returned by the processor.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- REST API Field: processorInformation.cardVerification.resultCode
- SCMP API Field: auth_cv_result
- Simple Order API Field: ccAuthReply_cvCode

processorIn formation. card Verification. result Code Raw

CVN result code sent directly from the processor.

This field is returned only when the processor sends this value.

[] Important: Do not use this value to evaluate the CVN result. Use this value only when debugging your order management system.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 11

- REST API Field: processorInformation.cardVerification.resultCodeRaw
- SCMP API Field: auth_cv_result_raw
- Simple Order API Field: ccAuthReply_cvCodeRaw

processor Information. consumer Authentication Response. code

Mapped response code for American Express SafeKey, RuPay PaySecure, or Visa Secure.

Important: a value of Ø for a Visa transaction indicates that Visa downgraded the transaction. When Visa approves an authorization and downgrades it, you are liable for the transaction. To confirm the downgrade, look at the e-commerce indicator for the transaction in the Business Center. You can proceed with the transaction if you want to accept liability. If you do not want to accept liability, reverse the authorization, attempt to authenticate the customer again, and request another authorization.

American Express SafeKey Response Codes

Response Code	Description
1	CAVV failed validation and authentication.
2	CAVV passed validation and authentication.
3	CAVV passed the validation attempt.
4	CAVV failed the validation attempt.
7	CAVV failed the validation attempt and the issuer is available.
8	CAVV passed the validation attempt and the issuer is available.
9	CAVV failed the validation attempt and the issuer is not available.
A	CAVV passed the validation attempt and the issuer is not available.
U	Issuer does not participate or 3D secure data was not used.
99	An unknown value was returned from the processor.

Visa Secure Response Codes

Response Code	Description
0	CAVV not validated because erroneous data was submitted.

Visa Secure Response Codes (continued)

Response Code	Description
	(Important: Visa downgraded the transaction. When you receive an authorization approval and the CAVV response code is 0, you are liable for the transaction. To confirm the downgrade, look at the e-commerce indicator for the transaction in the Business Center. You can proceed with the transaction if you want to accept liability. If you do not want to accept liability, reverse the authorization, attempt to authenticate the customer again, and request another authorization.
1	CAVV failed validation and authentication.
2	CAVV passed validation and authentication.
3	CAVV passed the validation attempt.
4	CAVV failed the validation attempt.
6	CAVV not validated because the issuer does not participate.
7	CAVV failed the validation attempt and the issuer is available.
8	CAVV passed the validation attempt and the issuer is available.
9	CAVV failed the validation attempt and the issuer is not available.
A	CAVV passed the validation attempt and the issuer is not available.
В	CAVV passed the validation with information only; no liability shift.
С	CAVV attempted but not validated; issuer did not return CAVV code.
D	CAVV not validated or authenticated; issuer did not return CAVV code.
Ι	Invalid security data.
U	Issuer does not participate or 3-D secure data was not used.
99	An unknown value was returned from the processor.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 3

- REST API Field: processorInformation.consumerAuthenticationResponse.code
- SCMP API Field: auth_cavv_response_code
- Simple Order API Field: ccAuthReply_cavvResponseCode

processor Information. consumer Authentication Response. code Raw

CAVV response code sent directly from the processor for American Express SafeKey, RuPay PaySecure, or Visa Secure.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 3

Mapping Information

• REST API Field: processorInformation.consumerAuthenticationResponse.codeRaw

processorInformation.customer.personalIDResult

Personal identifier result.

This field is returned only for Redecard in Brazil for Cybersource Latin American Processing. This field is returned only when the personal ID result is returned by the processor.

If you included **buyerInformation.personalIdentification[].id** and **buyerInformation.personalIdentification[].type** in the request, this value indicates whether **buyerInformation.personalIdentification[].id** and **buyerInformation.personalIdentification[].type** matched a value in a record on file.

Possible values:

- Y: Match
- N: No match
- K: Not supported
- U: Unknown
- Z: No response returned

Cybersource Latin American Processing is the name of a specific processing connection. Cybersource Latin American Processing does not refer to the general topic of processing in Latin America. The information in this field description, or in this section of the field description, is for the specific processing connection called Cybersource Latin American Processing. It is not for any other Latin American processors.

processorInformation.ems Transaction Risk Score

Fraud score for a MasterCard transaction.

This field is returned only for Visa Platform Connect.

- Positions 1-3: Fraud score. This value ranges from 001 to 998, where 001 indicates the least likely fraudulent transaction and 998 indicates the most likely fraudulent transaction.
- Positions 4-5: Reason code that specifies the reason for the fraud score. Possible values:
 - 01: Suspicious cross border activity.
 - 02: Suspicious transaction.
 - 03: High number of transactions.
 - 04: High number of transactions at an unattended terminal.
 - 05: Suspicious recent history of transactions.
 - 06: Suspicious activity and high number of transactions.
 - 07: Suspicious cardholder not present activity.
 - 08: Suspicious activity and low number of transactions.
 - 09: Suspicious service station activity.
 - 10: Suspicious online activity.
 - 11: High amount transaction or high cumulated amount recently spent.
 - 12: Suspicious gambling activity.

- 13: Suspicious phone or mail order activity.
- 14: Suspicious grocery store activity.
- 15: High risk country.
- 16: High amount, high number of transactions, and cross border.
- 17: Suspicious activity including previous declined transactions.
- 18: Suspicious airline activity.
- 19: Score forced to be 001 because the transaction being scored was a 04xx message.
- 20: Not a financial transaction.
- 21: Abnormal geographic activity.
- 22: Abnormal, high frequency at the same MCC.
- 23: High amount recent ATM activity.
- 24: Suspicious recent ATM activity or suspicious ATM activity following a recent abnormal activity.
- 25: Suspicious telecom activity.
- $\,{}^{\circ}$ 26: High number of international ATM transactions.
- 27: High cumulated withdrawal amount on international ATM.
- $\,{}^{\circ}$ 28: High velocity of domestic ATM transactions.
- $\,^{\circ}$ 29: High risk MCC.
- Positions 6-32: Reserved for future use.

processorIn formation. master Card Authentication Type

Type of authentication for which the transaction qualifies as determined by the Mastercard authentication service, which confirms the identity of the cardholder.

Mastercard provides this value to Cybersource.

This field is returned only for Visa Platform Connect.

Possible values:

- 1: Transaction qualifies for Mastercard authentication type 1.
- 2: Transaction qualifies for Mastercard authentication type 2.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 132

• Field: Mastercard Member Defined Data

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: processorInformation. master Card Authentication Type$
- SCMP API Field: auth_transaction_qualification
- Simple Order API Field: ccAuthReply_transactionQualification

processorInformation.masterCardServiceCode

Mastercard service that was used for the transaction.

Mastercard provides this value to Cybersource.

This field is returned only for Visa Platform Connect.

Possible value is 53: Mastercard card-on-file token service.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 133-134

• Field: Mastercard Merchant on-behalf service

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

- $\bullet \ REST \ API \ Field: processorInformation. master Card Service Code$

- $\bullet \ REST \ API \ Field: processorInformation. master Card Service Code$
- SCMP API Field: auth_reversal_payment_card_service
- $\bullet \ Simple \ Order \ API \ Field: ccAuthReversalReply_payment Card Service$

processorIn formation. master Card Service Reply Code

Result of the Mastercard card-on-file token service.

Mastercard provides this value to Cybersource.

This field is returned only for Visa Platform Connect.

Possible values:

- C: Service completed successfully.
- F: One of the following:
 - Incorrect Mastercard POS entry mode. The Mastercard POS entry mode should be 81 for an authorization or authorization reversal.
 - Incorrect Mastercard POS entry mode. The Mastercard POS entry mode should be 01 for a tokenized request.
 - Token requestor ID is missing or formatted incorrectly.
- I: One of the following:
 - Invalid token requestor ID.
 - Suspended or deactivated token.
 - Invalid token (not in mapping table).
- T: Invalid combination of token requestor ID and token.
- U: Expired token.
- W: Primary account number (PAN) listed in electronic warning bulletin. This field is returned only for Visa Platform Connect.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: processorInformation. master Card Service Reply Code$
- SCMP API Field: auth_payment_card_service_result
- Simple Order API Field: ccAuthReply_paymentCardServiceResult

processorIn formation. master Card Service Reply Code

Result of the Mastercard card-on-file token service.

Mastercard provides this value to Cybersource.

This field is returned only for Visa Platform Connect.

Possible values:

- C: Service completed successfully.
- F: One of the following:
 - Incorrect Mastercard POS entry mode. The Mastercard POS entry mode should be 81 for an authorization or authorization reversal.
 - Incorrect Mastercard POS entry mode. The Mastercard POS entry mode should be 01 for a tokenized request.
 - Token requestor ID is missing or formatted incorrectly.
- I: One of the following:
 - Invalid token requestor ID.
 - Suspended or deactivated token.
 - Invalid token (not in mapping table).
- T: Invalid combination of token requestor ID and token.
- U: Expired token.
- W: Primary account number (PAN) listed in electronic warning bulletin. This field is returned only for Visa Platform Connect

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

Mapping Information

 $\bullet \ REST\ API\ Field: processorInformation. master Card Service Reply Code$

• SCMP API Field: auth_reversal_payment_card_service_result

• Simple Order API Field: ccAuthReversalReply_paymentCardServiceResult

processorInformation.merchantAdvice.code

Reason that the recurring payment transaction was declined.

For some processors, this field is used only for Mastercard. For other processors, this field is used for Visa and Mastercard. And for other processors, this field is not implemented.

Possible values:

- 00: No information, or response not provided.
- 01: New account information is available. Obtain the new information.
- 02: Try again later.
- 03: Do not try again. Obtain another type of payment from the customer.
- 04: Problem with a token or a partial shipment indicator. Do not try again.
- 08: Payment blocked by the payment card company.
- 21: Recurring payment cancellation service.
- 99: An unknown value was returned from the processor.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

- REST API Field: processorInformation.merchantAdvice.code
- SCMP API Field: auth_merchant_advice_code
- $\bullet \ Simple \ Order \ API \ Field: \ ccAuthReply_merchantAdviceCode$

processorInformation.merchantAdvice.codeRaw

Raw merchant advice code sent directly from the processor.

This field is returned only for Mastercard.

Possible values:

- 00: No information, or response not provided.
- 01: New account information is available. Obtain the new information.
- 02: Try again later.
- 03: Do not try again. Obtain another type of payment from the customer.
- 04: Problem with a token or a partial shipment indicator. Do not try again.
- 08: Payment blocked by the payment card company.
- 21: Recurring payment cancellation service.
- 99: An unknown value was returned from the processor.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

- Record: CP01 TCR7
- Position: 96-99
- Field: Response Data—Merchant Advice Code

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

Mapping Information

 $\bullet \ REST \ API \ Field: processorInformation.merchant Advice.code Raw$

• SCMP API Field: auth_merchant_advice_code_raw

• Simple Order API Field: ccAuthReply_merchantAdviceCodeRaw

processorIn formation. merchant Number

Identifier that was assigned to you by your acquirer.

This value must be printed on the receipt.

This field is supported only for Cybersource integrations.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: processorInformation.merchantNumber
- SCMP API Field: acquirer_merchant_number
- Simple Order API Field: acquirerMerchantNumber

processorInformation.networkTransactionId

Network transaction identifier (TID).

This field is returned only for Visa Platform Connect and only when the credit is authorized.

You can use this value to identify a specific transaction when you are discussing the transaction with your acquirer.

Specifications

• Field Type: Response

• Type: String

• **Length**: 15

- REST API Field: processorInformation.networkTransactionId
- SCMP API Field: credit_auth_payment_network_transaction_id
- Simple Order API Field: ccCreditReply_paymentNetworkTransactionID

processorIn formation. response Category Code

Processor-defined response category code.

This field is returned only for:

- Japanese issuers
- Domestic transactions in Japan
- Credit Mutuel-CIC—the value returned in this field is a processor transaction ID required for troubleshooting. The associated detail error code is in the **processorInformation.responseCategoryCode** field or the **issuerInformation.responseCode** field, depending on which service you requested.

Specifications

• Credit Mutuel-CIC:

• Field Type: Response

• **Data Type:** String

∘ **Data Length:** 36

• All other processors:

• Field Type: Response

• Data Type: String

∘ **Data Length:** 3

- $\bullet \ REST \ API \ Field: processorInformation.response Category Code$
- SCMP API Field: additional_processor_response
- Simple Order API Field: additionalProcessorResponse

Error message from the issuer or the processor. Depends on service requested. See service-specific description below.

① Important: Do not use this field to evaluate the result of the transaction request.

Authorization and Incremental Authorization

This field is returned only when the processor sends this value.

Credit

This field is returned only when the credit is authorized and the processor sends this value.

PIN debit

Response value that is returned by the processor or bank.

AIBMS

When this value is 08, you can accept the transaction if the customer provides you with identification.

Atos

This value is the response code sent from Atos and it might also include the response code from the bank.

Format: aa,bb with the two values separated by a comma and where:

• aa is the two-digit error message from Atos.

• bb is the optional two-digit error message from the bank.

Credit Mutuel-CIC

This value is the status code and the error or response code received from the processor separated by a colon.

Format: [status code]:E[error code] or [status code]:R[response code]

Example: 2:R06

JCN Gateway

Processor-defined detail error code. The associated response category code is in the **additionalProcessorResponseadditional_processor_responseprocessorInformation.responseCategoryCode** field.

Specifications

• JCN Gateway:

• Field Type: Response

• **Data Type:** String

• **Data Length:** 3

• All other processors:

• **Field Type:** Response

• **Data Type:** String

 \circ **Data Length:** 10

- REST API Field: processorInformation.responseCode
- $\bullet \ SCMP \ API \ Field: auth_auth_response, credit_auth_response \ and \ incremental_auth_response \\$
- Simple Order API Field: ccAuthReply_processorResponse

Error message from the issuer or the processor.

This field is returned only when the processor sends this value.

(1) Important: Do not use this field to evaluate the result of the request.

JCN Gateway

Processor-defined detail error code. The associated response category code is in the **processorInformation.responseCategoryCode** field.

Specifications

- JCN Gateway:
 - **Field Type:** Response
 - **Data Type:** String
 - Data Length: 3
- All other processors:
 - Field Type: Response
 - **Data Type:** String
 - Data Length: 10

- REST API Field: processorInformation.responseCode
- SCMP API Field: auth_reversal_auth_response
- $\bullet \ Simple \ Order \ API \ Field: \ ccAuth Reversal Reply_processor Response$

Error message from the issuer or the processor.

This field is returned only when the credit is authorized and the processor sends this value.

① Important: Do not use this field to evaluate the result of the request.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 10

- REST API Field: processorInformation.responseCode
- SCMP API Field: credit_auth_response
- Simple Order API Field: ccCreditReply_processorResponse

Error message from the issuer or the processor.

This field is returned only when the processor sends this value.

(!) **Important**: Do not use this field to evaluate the result of the request.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 10

- REST API Field: processorInformation.responseCode
- SCMP API Field: incremental_auth_response
- Simple Order API Field: ccIncrementalAuthReply_processorResponse

Response value that is returned by the processor or bank.

(I) Important: Do not use this field to evaluate the results of the transaction request.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

- REST API Field: processorInformation.responseCode
- SCMP API Field: pin_debit_credit_processor_response
- Simple Order API Field: pinDebitCreditReply_processorResponse

Response value that is returned by the processor or bank.

(Important: Do not use this field to evaluate the results of the transaction request.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

- REST API Field: processorInformation.responseCode
- SCMP API Field: pin_debit_purchase_processor_response
- Simple Order API Field: pinDebitPurchaseReply_processorResponse

Response value that is returned by the processor or bank.

[] Important: Do not use this field to evaluate the results of the transaction request.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

- REST API Field: processorInformation.responseCode
- SCMP API Field: pin_debit_reversal_processor_response
- Simple Order API Field: pinDebitReversalReply_processorResponse

processorInformation.responseDetails

Additional information about a decline.

This field is returned only for Visa Platform Connect.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 255

Mapping Information

• REST Field: processorInformation.responseDetails

• SCMP API Field: additional_data

• Simple Order API Field: additionalData

processorInformation.routing.customerSignatureRequired

Indicates whether you need to obtain the cardholder's signature.

Possible values:

- Y: You need to obtain the cardholder's signature.
- N: You do not need to obtain the cardholder's signature.

This field is supported only on FDC Nashville Global.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- $\bullet \ REST\ API\ Field: processorInformation.routing. customer Signature Required$
- SCMP API Field: routing_signature_cvm_required
- Simple Order API Field: routing_signatureCVMRequired

processorInformation.routing.network

Network that was used to route the transaction.

Possible values:

Network	Code
Accel	Е
AFFN	U
Alaska Option	3
CU24	С
Interlink	G
Maestro	8
NETS	P
NYCE	F
Pulse	Н
Shazam	7
Star	M
Visa	V

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

- REST API Field: processorInformation.routing.network
- SCMP API Field: pin_debit_credit_network_code
- Simple Order API Field: pinDebitCreditReply_networkCode

processorInformation.routing.network

Network that was used to route the transaction.

Possible values:

Network	Code
Accel	Е
AFFN	U
Alaska Option	3
CU24	С
Interlink	G
Maestro	8
NETS	P
NYCE	F
Pulse	Н
Shazam	7
Star	M
Visa	V

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

- REST API Field: processorInformation.routing.network
- SCMP API Field: pin_debit_purchase_network_code
- Simple Order API Field: pinDebitPurchaseReply_networkCode

processorInformation.routing.network

Indicates whether the transaction was routed on a credit network, a debit network, or the STAR signature debit network.

Possible values:

- C: Credit network
- D: Debit network (without signature)
- S: STAR signature debit network

This field is supported only on FDC Nashville Global.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 1

- REST API Field: processorInformation.routing.network
- SCMP API Field: routing_network_type
- Simple Order API Field: routing_networkType

processorIn formation. routing. network Name

Name of the network on which the transaction was routed.

This field is supported only on FDC Nashville Global.

Possible values:

- NYCE
- PULSE
- STAR
- Visa
- Mastercard

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 10

- REST API Field: processorInformation.routing.networkName
- SCMP API Field: routing_network_label

• Simple Order API Field: routing_networkLabel

processorInformation.salesSlipNumber (Request)

Transaction identifier that you generate.

This field is supported only on JCN Gateway and Visa Platform Connect.

Visa Platform Connect

In Argentina, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 8-15

• Field: Field Purchase Receipt Number

In Japan, the value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR9

• Position: 143-147

• Field: Sales Slip Number

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: Interger

- Data Length in Argentina: 8
- Data Length in Japan: 5

- $\bullet \ REST \ API \ Field: processorInformation. sales Slip Number$
- SCMP API Field: sales_slip_number
- Simple Order API Field: salesSlipNumber

processorInformation.salesSlipNumber (Response)

Transaction identifier.

The difference between this field and the **processorInformation.systemTraceAuditNumber** field is that Cybersource generates the receipt number for the **processorInformation.systemTraceAuditNumber** field, and you must print the receipt number on the receipt. However, for the **processorInformation.salesSlipNumber** field, you can generate the sales slip number, and you can choose to print the sales slip number on the receipt.

This field is supported only on JCN Gateway and Visa Platform Connect.

Specifications

• Field Type: Response

• Data Type: Interger

• Data Length: 5

Mapping Information

• REST API Field: processorInformation.salesSlipNumber

• SCMP API Field: sales_slip_number

• Simple Order API Field: salesSlipNumber

processorIn formation. system Trace Audit Number

Receipt number.

Credit Card Transactions

This field is returned only for American Express Direct and Visa Platform Connect.

- American Express Direct: System trace audit number (STAN). This value identifies the transaction and is useful when investigating a chargeback dispute.
- Visa Platform Connect: System trace number that must be printed on the customer's receipt.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 6

- REST API Field: processorInformation.systemTraceAuditNumber
- SCMP API Field: receipt_number
- Simple Order API Field: receiptNumber

processorinformation.tokenizedCard.type

Three-digit value that indicates the card type.

Card-Present Transactions

This field is returned in the response message when the client software that is installed on the POS terminal uses the Token Management Service (TMS) to retrieve tokenized payment details.

You must contact customer support to have your account enabled to receive these fields in the credit response message.

This field is supported only for Cybersource integrations.

Card Type Codes

Each processor and acquirer supports some of the following card types. No processor or acquirer supports all card types.

001: Visa

For all processors except Ingenico ePayments and SIX, the Visa Electron card type is processed the same way that the Visa debit card is processed. Use card type value 001 for Visa Electron.

002: Mastercard and Eurocard

For Eurocard, which is the European regional brand of Mastercard, you must include the card type field in a request for an authorization or stand-alone credit.

003: American Express

004: Discover

005: Diners Club

006: Carte Blanche

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

007: JCB

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

014: EnRoute

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

021: JAL

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

024: Maestro (UK Domestic)

031: Delta

Delta. Use this value only for Ingenico ePayments. For other processors, use 001 for all Visa card types. For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

033: Visa Electron

Use this value only for Ingenico ePayments and SIX. For other processors, use old for all Visa card types. For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

034: Dankort

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

036: Cartes Bancaires

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

037: Carta Si

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

040: UATP

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

042: Maestro (International)

For this card type, you must include the card type field in a request for an authorization or stand-alone credit.

050: Hipercard

For this card type on 3.0, , or , you must include the card type field in a request for an authorization or stand-alone credit. This card type is not supported on 1.5.

051: Aura

054: Elo

For this card type on or, you must include the card type field in a request for an authorization or stand-alone credit.

061: RuPay

062: China UnionPay

058: Carnet

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 4

Mapping Information

• REST API Field: paymentInformation.card.type and paymentInformation.tokenizedCard.type

• SCMP API Field: card_type

• Simple Order API Field: card_cardType

processorInformation.transactionID

Network transaction identifier (TID).

You can use this value to identify a specific transaction when you are discussing the transaction with your processor. Not all processors provide this value.

For Cielo, this value is the non-sequential unit (NSU) and is returned for all transactions. Cielo or the issuing bank generates the value.

For Credit Mutuel-CIC, this value is the proof of sale or non-sequential unit (NSU) number. The Cielo acquirer, Rede acquirer, or issuing bank generates the value.

For Visa Platform Connect, the following values are returned for each card type:

- American Express: American Express generates this value. It is included in all replies from the American Express Global Network (AEGN).
- Mastercard: This value is the qualification information for the Mastercard Interchange Compliance (MIC) program. It is used for all Mastercard responses coming from Banknet through Visa to certified acquirers. Format:
 - ∘ Bits 1-4: Banknet date
 - ∘ Bits 5-7: Mastercard product ID
 - Bits 8-13: Banknet reference number generated by Mastercard for each transaction
 - ∘ Bits 14-15: Spaces
- Visa and Other Card Types: The payment card company generates this value. It is unique for each original authorization and identifies a transaction throughout its life cycle.

For GPN, the following values are returned for each card type:

- American Express: The payment card company generates this value. This value is saved and sent to the processor in all subsequent capture requests.
 - Discover: The payment card company generates this value. This value is saved and sent to the processor in all subsequent requests for full authorization reversals and captures.

• Mastercard: The payment card company generates this value. This value is saved and sent to the processor in all subsequent requests for full authorization reversals and captures. Format:

• Bits 1-9: Banknet reference number generated by Mastercard for each transaction

• Bits 10-13: Banknet date

• Bits 14-15: Spaces

• Visa: The payment card company generates this value. This value is saved and sent to the processor in all subsequent requests for full authorization reversals and captures.

• Other Card Types: Not used.

Specifications

Credit Mutuel-CIC:

• Field Type: Response

• Data Type: String

• Data Length: 20

Elavon:

• Field Type: Response

• Data Type: String

• Data Length: 22

All other processors:

• Field Type: Response

• Data Type: String

• Data Length: 15

Mapping Information

• REST Field: processorInformation.transactionID

• SCMP API Field: auth_payment_network_transaction_id

 $\bullet \ Simple \ Order \ API \ Field: ccAuthReply_paymentNetworkTransactionID$

processorInformation.transactionID

Processor transaction ID.

This field is returned only for Cielo, Cybersource Latin American Processing, and Moneris.

Cielo and Cybersource Latin American Processing

This value is a unique identifier for the transaction.

Cybersource Latin American Processing is the name of a specific processing connection. *Cybersource Latin American Processing* does not refer to the general topic of processing in Latin America. The information in this field description, or in this section of the field description, is for the specific processing connection called *Cybersource Latin American Processing*. It is not for any other Latin American processors.

Moneris

This value identifies the transaction on a host system. It contains the following information:

- Terminal used to process the transaction
- Shift during which the transaction took place
- Batch number
- Transaction number within the batch

You must store this value. If you give the customer a receipt, display this value on the receipt.

Example: For the value 66012345001069003:

• Terminal ID = 66012345

- Shift number = 001
- Batch number = 069
- Transaction number = 003

Specifications

- Cielo and Cybersource Latin American Processing:
 - Field Type: Response
 - **Data Type:** String
 - Data Length: 50
- Moneris:
 - Field Type: Response
 - **Data Type:** String
 - ∘ **Data Length:** 18

- REST API Field: processorInformation.transactionID
- SCMP API Field: auth_processor_trans_id
- Simple Order API Field: ccAuthReply_processorTransactionID

processorInformation.transactionID

Processor transaction ID.

This field is returned only for Moneris.

This value identifies the transaction on a host system. It contains the following information:

- Terminal used to process the transaction.
- Shift during which the transaction took place.
- Batch number.
- Transaction number within the batch.

You must store this value. If you give the customer a receipt, display this value on the receipt.

Example For the value 66012345001069003:

- Terminal ID = 66012345
- Shift number = 001
- Batch number = 069
- Transaction number = 003

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 18

- REST API Field: processorInformation.transactionID
- SCMP API Field: auth_reversal_processor_trans_id
- $\bullet \ Simple \ Order \ API \ Field: ccAuthReversalReply_processorTransactionID$

processorInformation.transactionID

Transaction identifier (TID) that is used to identify and track a transaction throughout its life cycle.

This field is returned only for American Express Direct.

American Express generates this value. To comply with the CAPN requirements, this value must be included in all subsequent follow-on requests, such as captures and follow-on credits.

When you perform authorizations, captures, and credits through Cybersource, Cybersource passes this value from the authorization service to the subsequent services for you. However, when you perform authorizations through Cybersource and perform subsequent services through other financial institutions, you must ensure that requests for captures and credits include this value.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: processorInformation.transactionID

• SCMP API Field: auth_transaction_id

• Simple Order API Field: ccAuthReply_transactionID

processorInformation.transactionID

Processor transaction ID.

This field is returned only for Moneris.

This value identifies the transaction on a host system. It contains the following information:

- Terminal used to process the transaction.
- Shift during which the transaction took place.
- Batch number.
- Transaction number within the batch.

You must store this value. If you give the customer a receipt, display this value on the receipt.

Example For the value 66012345001069003:

- Terminal ID = 66012345
- Shift number = 001
- Batch number = 069
- Transaction number = 003

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 18

- $\bullet \ REST \ API \ Field: processorInformation.transaction ID$
- SCMP API Field: bill_processor_trans_id
- $\bullet \ Simple \ Order \ API \ Field: cc Capture Reply_processor Transaction ID$

processorInformation.transactionID

Processor transaction ID.

This field is returned only for Moneris.

This value identifies the transaction on a host system. It contains the following information:

- Terminal used to process the transaction.
- Shift during which the transaction took place.
- Batch number.
- Transaction number within the batch.

You must store this value. If you give the customer a receipt, display this value on the receipt.

Example For the value 66012345001069003:

- Terminal ID = 66012345
- Shift number = 001
- Batch number = 069
- Transaction number = 003

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 18

- REST API Field: processorInformation.transactionID
- SCMP API Field: credit_processor_trans_id
- $\bullet \ Simple \ Order \ API \ Field: ccCreditReply_processorTransactionID$

processorInformation.transactionId

Network transaction identifier (TID) or Processor transaction ID. Depends on the service requested. See description below.

Incremental Authorization

Network transaction identifier (TID). You can use this value to identify a specific transaction when you are discussing the transaction with your processor.

Authorization Reversal, Credit, and Capture services

Processor transaction ID. This field is returned only for Moneris.

This value identifies the transaction on a host system. It contains the following information:

- Terminal used to process the transaction.
- Shift during which the transaction took place.
- Batch number.
- Transaction number within the batch.

You must store this value. If you give the customer a receipt, display this value on the receipt.

Example For the value 66012345001069003:

- Terminal ID = 66012345
- Shift number = 001
- Batch number = 069

• Transaction number = 003

Specifications

Incremental Authorization service

• Field Type: Response

• Data Type: String

• Data Length: 15

Authorization Reversal, Credit, and Capture services

• Field Type: Response

• Data Type: String

• Data Length: 18

Mapping Information

• REST API Field: processorInformation.transactionId

• SCMP API Field: incremental_auth_payment_network_transaction_id, auth_reversal_processor_trans_id, credit_processor_trans_id and bill_processor_trans_id

• Simple Order API Field: ccIncrementalAuthReply_paymentNetworkTransactionID

processorInformation.transactionId

Transaction identifier generated by the processor.

Specifications

• Field Type: Response

• Data Type: Integer

• Data Length: 15

Mapping Information

• REST API Field: processorInformation.transactionId

• SCMP API Field: pin_debit_purchase_transaction_id

• Simple Order API Field: pinDebitPurchaseReply_transactionID

processorInformation.transactionIntegrityCode

Transaction integrity classification provided by Mastercard.

This field is returned only for Visa Platform Connect.

This value indicates Mastercard's evaluation of the transaction's safety and security.

Possible values for card-present transactions:

- A1: EMV or token in a secure, trusted environment.
- **B1**: EMV or chip equivalent.
- C1: Magnetic stripe.
- **E1**: Key entered.
- U0: Unclassified.

Possible values for card-not-present transactions:

- A2: Digital transactions.
- B2: Authenticated checkout.
- C2: Transaction validation.
- D2: Enhanced data.
- E2: Generic messaging.
- U0: Unclassified.

For information about these values, contact Mastercard or your acquirer.

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP01 TCR6

• Position: 136-137

• Field: Mastercard Transaction Integrity Classification

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 2

- REST API Field: processorInformation.transactionIntegrityCode
- SCMP API Field: auth_transaction_integrity
- Simple Order API Field: ccAuthReply_transactionIntegrity

recipientInformation.accountId

Identifier for the recipient's account.

Set the value for this field to the first six digits and last four digits of the recipient's account number.

This field is a pass-through, which means that the value is not verified or modified in any way before it is sent to the processor. If the field is not required for the transaction, it is not forwarded to the processor.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

Mapping Information

• REST API Field: recipientInformation.accountId

• SCMP API Field: recipient_account_id

• Simple Order API Field: recipient_accountID

recipient Information. address 1

The street address of the recipient.

This field is supported only on FDC Compass.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 50

- REST API Field:recipientInformation.address1
- SCMP API Field: recipient_address
- Simple Order API Field: recipient_address

recipient Information. administrative Area

State or province of the recipient.

This field is supported only on FDC Compass

Specifications

• Field Type:Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: recipientInformation.administrativeArea

• SCMP API Field: recipient_state

• Simple Order API Field: recipient_state

Related information

State, Province, and Territory Codes for the United States and Canada

recipientInformation.country

The country associated with the address of the recipient.

This field is supported only on FDC Compass.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: recipientInformation.country

• SCMP API Field: recipient_country

• Simple Order API Field: recipient_country

Related information

ISO Standard Country Codes

recipientInformation.dateOfBirth

Recipient's date of birth.

This field is a pass-through, which means that it is verified that the value is eight numeric characters but otherwise the value is not verified or modified in any way before it is sent to the processor. If the field is not required for the transaction, it is not forwarded to the processor.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 8

• Format: YYYYMMDD

Mapping Information

• REST API Field: recipientInformation.dateOfBirth

• SCMP API Field: recipient_date_of_birth

• Simple Order API Field: recipient_dateOfBirth

recipient Information. first Name

First name of the recipient.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 35

Mapping Information

• REST API Field: recipientInformation.firstName

• SCMP API Field: recipient_firstname

• Simple Order API Field: recipient_firstName

recipient Information. last Name

Recipient's last name.

This field is a pass-through, which means that the value is not verified or modified in any way before it is sent to the processor. If the field is not required for the transaction, it is not forwarded to the processor.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 35

Mapping Information

• REST API Field: recipientInformation.lastName

• SCMP API Field: recipient_lastname

• Simple Order API Field: recipient_lastName

recipientInformation.locality

The city of the recipient.

This field is supported only on FDC Compass.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 25

- REST API Field: recipientInformation.locality
- SCMP API Field: recipient_city
- Simple Order API Field: recipient_city

recipient Information. middle Initial

Middle initial of the recipient.

This field is supported only on FDC Compass

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

- REST API Field: recipientInformation.middleInitial
- SCMP API Field: recipient_middleinitial
- Simple Order API Field: recipient_middleInitial

recipientInformation.middleName

Middle name of the recipient.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 35

Mapping Information

• REST API Field: recipientInformation.middleName

• SCMP API Field: recipient_middlename

• Simple Order API Field: recipient_middleName

recipient Information. phone Number

Phone number of the recipient.

This field is supported only on FDC Compass

Specifications

• Field Type: Request

• Data Type: String with numbers only

• Data Length: 20

- REST API Field: recipientInformation.phoneNumber
- SCMP API Field: recipient_phone_number
- Simple Order API Field: recipient_phoneNumber

recipientInformation.postalCode

Partial postal code for the recipient's address.

Example: If the postal code is NN5 7SG, the value for this field should be the first part of the postal code: NN5.

This field is a pass-through, which means that the value is not verified or modified in any way before it is sent to the processor. If the field is not required for the transaction, it is not forwarded to the processor.

For Payouts, this field is supported only on FDC Compass.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

Mapping Information

• REST API Field: recipientInformation.postalCode

• SCMP API Field: recipient_postal_code

• Simple Order API Field: recipient_postalCode

Reference number for the transaction.

Refer to the Getting Started with Cybersource Advanced guide for information about order tracking and reconciliation.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 60

Mapping Information

• REST API Field: reconciliationId

• SCMP API Field: pin_debit_credit_trans_ref_no

• Simple Order API Field: pinDebitCreditReply_reconciliationID

Reference number for the transaction.

Refer to the *Getting Started* guide (see Related Information below) for information about order tracking and reconciliation.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 60

Mapping Information

• REST API Field: reconciliationId

• SCMP API Field: pin_debit_purchase_trans_ref_no

• Simple Order API Field: pinDebitPurchaseReply_reconciliationID

Unique identifier that the DCC provider generates.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 60

Mapping Information

• REST API Field: reconciliationId

• SCMP API Field: dcc_reference_number

• Simple Order API Field: dcc_referenceNumber

Reference number for the transaction.

Refer to the *Getting Started* guide (see Related Information below) for information about order tracking and reconciliation.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 60

Mapping Information

• REST API Field: reconciliationId

• SCMP API Field: pin_debit_reversal_trans_ref_no

• Simple Order API Field: pinDebitReversalReply_reconciliationID

recurring Payment Information. end Date

The date after which no further recurring authorizations should be performed.

Format: YYYYMMDD.

Specifications

• Request: Required

• Data Type: String

• Data Length: 10

- REST API Field: recurringPaymentInformation.endDate
- SCMP API Field: pa_recurring_end_date
- Simple Order API Field: payerAuthEnrollService_recurringEndDate

recurringPaymentInformation.frequency

Integer value indicating the minimum number of days between recurring authorizations.

A frequency of monthly is indicated by the value 28. Multiple of 28 days will be used to indicate months.

Example: 6 months = 168

Example values accepted (31 days):

- 31
- 031
- 0031

Specifications

• Request: Required

• Data Type: Integer

• Data Length: 4

- REST API Field: recurringPaymentInformation.frequency
- SCMP API Field: pa_recurring_frequency

• Simple Order API Field: payerAuthEnrollService_recurringFrequency

recurringPaymentInformation.numberOfPayments

An integer value greater than 1 indicating the maximum number of permitted authorizations for installment payments.

[] Important: This value is required if the merchant and cardholder have agreed to installment payments.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 3

- REST API Field: recurringPaymentInformation.numberOfPayments
- SCMP API Field: pa_installment_total_count
- Simple Order API Field: payerAuthEnrollService_installmentTotalCount

recurring Payment Information. or iginal Purchase Date

Date of original purchase. Required for recurring transactions.

If this field is empty, the current date is used.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 17

- REST API Field: recurringPaymentInformation.originalPurchaseDate
- SCMP API Field: pa_recurring_original_purchase_date
- Simple Order API Field: payerAuthEnrollService_recurringOriginalPurchaseDate

refundAmountDetails.currency

Currency used for the order.

Use a three-character ISO currency code.

For an authorization reversal or capture, you must use the same currency that was used for the authorization.

DCC with a Third-Party Provider: Customer's billing currency.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

- REST API Fields:
 - · orderInformation.amountDetails.currency
 - $^{\circ}\ credit Amount Details. currency$
 - $^{\circ}\ refund Amount Details. currency$
 - reversalAmountDetails.currency
- SCMP API Field: currency

• Simple Order API Field: purchaseTotals_currency

refundAmountDetails.refundAmount

Amount that was credited.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: creditAmountDetails.creditAmount and refundAmountDetails.refundAmount

• SCMP API Field: credit_credit_amount

• Simple Order API Field: ccCreditReply_amount

replacementReason

Reason for replacement of the terminal.

The reason is recorded only if the **statusChangeReason** field is set to Replaced.

Valid Values:

- Chip Read Error
- Compromised
- Incorrect Key Injection
- Incorrect Password
- Power Issue
- Suspected Tampering
- Tampered
- Terminal Error
- Other

Specifications

• Field Type: Request

• Data Type: Enum of string

• Data Length: Pre-defined values

- REST API Field: replacementReason
- SCMP API Field: No corresponding field
- Simple Order API Field: No corresponding field
- Secure Acceptance API Field: No corresponding field

replacement Serial Number

The new serial number for the terminal that replaces the current one.

The reason is recorded only if the **statusChangeReason** field is set to Replaced.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 64

- REST API Field: replacementSerialNumber
- SCMP API Field: No corresponding field
- Simple Order API Field: No corresponding field
- Secure Acceptance API Field: No corresponding field

reversalAmountDetails.currency

Currency used for the order.

Use a three-character ISO currency code.

For an authorization reversal or capture, you must use the same currency that was used for the authorization.

DCC with a Third-Party Provider: Customer's billing currency.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

- REST API Fields:
 - · orderInformation.amountDetails.currency
 - $^{\circ}\ credit Amount Details. currency$
 - $^{\circ}\ refund Amount Details. currency$
 - $^{\circ}\; reversal Amount Details. currency$
- SCMP API Field: currency

• Simple Order API Field: purchaseTotals_currency

reversal Amount Details. or iginal Transaction Amount

Amount of the original transaction.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- SCMP API Field: original_transaction_amount
- Simple Order API Field: originalTransaction_amount

reversal Amount Details. reversed Amount

Amount that was reversed.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: reversalAmountDetails.reversedAmount

• SCMP API Field: auth_reversal_amount

• Simple Order API Field: ccAuthReversalReply_amount

reversalInformation.amountDetails.currency

Currency used for the order.

For possible values, refer to ISO Standard Currency Codes.

For authorization reversal or capture services, you must use the same currency that was used for the authorization.

For the PIN debit reversal service, you must use the same currency that was used for the PIN debit purchase or PIN debit credit that you are reversing.

DCC with a Third-Party Provider

Customer's billing currency.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

- REST API Fields:
 - ${}^{\circ}\ order Information. amount Details. currency$
 - reversalInformation.amountDetails.currency
- SCMP API Field: currency

• Simple Order API Field: purchaseTotals_currency

reversalInformation.amountDetails.totalAmount

Grand total for the order.

This value cannot be negative. You can include a decimal point (.), but you cannot include any other special characters. The amount is truncated to the correct number of decimal places.

(I) Important: Some processors have specific requirements and limitations, such as maximum amounts and maximum field lengths.

DCC with a Third-Party Provider

Set this field to the converted amount that was returned by the DCC provider. You must include either this field or **orderInformation.lineItems[].unitPrice** in a request.

Original Credit Transaction (OCT) on FDC Compass or Visa Platform Connect

Amount must be less than or equal to 50,000 USD. Amount limits differ depending on limitations imposed by your acquirer in addition to local laws and regulations. Contact your acquirer for more information.

PIN Debit Transactions

If the transaction includes a cash-back amount, that amount must be included in this total amount. If the transaction includes a surcharge amount, that amount must be included in this total amount.

Zero Amount Authorizations

If your processor supports zero amount authorizations, you can set this field to of for the authorization to verify whether the card is lost or stolen.

Specifications

Comercio Latino

• Field Type: Request

• Data Type: String

• Data Length: 19

- REST API Fields:
 - $^{\circ}\ order Information. amount Details. total Amount$
 - reversalInformation.amountDetails.totalAmount
- SCMP API Field: grand_total_amount
- Simple Order API Field: purchaseTotals_grandTotalAmount

reversalInformation.reason

Reason for the authorization reversal.

Set the value for this field to 34, which indicates suspected fraud.

This field is ignored for processors that do not support this value.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

- REST API Field: reversalInformation.reason
- SCMP API Field: auth_reversal_reason
- Simple Order API Field: ccAuthReversalService_reversalReason

riskInformation.buyerHistory.addCardAttempts

Number of add card attempts in the last 24 hours.

Recommended for Discover ProtectBuy.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 3

- REST API Field: riskInformation.buyerHistory.addCardAttempts
- SCMP API Field: pa_add_card_attempts
- Simple Order API Field: payerAuthEnrollService_addCardAttempts

risk Information. buyer History. customer Account. password Change Date

Date the cardholder last changed or reset password on account.

This field can contain one of these values:

- -1: Guest account
- O: Changed during this transaction

If neither applies, enter the date in YYYYMMDD format.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

- $\bullet \ REST\ API\ Field: riskInformation. buyer History. customer Account. password Change Date$
- SCMP API Field: customer_account_password_change_date
- Simple Order API Field: billTo_customerAccountPasswordChangeDate

riskInformation. buyer History. customer Account. create Date

Date the cardholder opened the account.

This field can contain one of these values:

- -1: Guest account
- Opened during this transaction

If neither applies, enter the date in YYYYMMDD format.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

- $\bullet \ REST\ API\ Field: riskInformation. buyer History. customer Account. create Date$
- SCMP API Field: customer_account_create_date
- Simple Order API Field: billTo_customerAccountCreateDate

risk Information. buyer History. customer Account. last Change Date

Date the cardholder's account was last changed.

This includes changes to the billing or shipping address, new payment accounts or new users added. This field can contain one of these values:

- -1: Guest account
- 0: Changed during this transaction

If neither applies, enter the date in YYYYMMDD format.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

- REST API Field: riskInformation.buyerHistory.customerAccount.lastChangeDate
- SCMP API Field: customer_account_change_date
- Simple Order API Field: billTo_customerAccountChangeDate

riskInformation. buyer History. transaction Count Day

Number of transaction (successful or abandoned) for this cardholder account within the last 24 hours.

Recommended for Discover ProtectBuy.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 3

- REST API Field: riskInformation.buyerHistory.transactionCountDay
- SCMP API Field: pa_transaction_count_day
- Simple Order API Field: payerAuthEnrollService_transactionCountDay

riskIn formation. buyer History. transaction Count Year

Number of transactions (successful and abandoned) for this cardholder account within the last year.

Recommended for Discover ProtectBuy.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 3

Mapping Information

• REST API Field: riskInformation.buyerHistory.transactionCountYear

• SCMP API Field: pa_transaction_count_year

• Simple Order API Field: payerAuthEnrollService_transactionCountYear

senderInformation.account.fundsSource

Source of funds.

Possible values:

- 01: Credit card.
- 02: Debit card.
- 03: Prepaid card.
- 04: Depends on the processor:
 - Chase Paymentech Solutions: cash
 - FDC Compass: deposit account
 - Visa Platform Connect: cash
- 05: Debit or deposit account that is not linked to a Visa card. Includes checking accounts, savings accounts, proprietary debit or ATM card accounts, and digital wallet accounts.
- 06: Credit account that is not linked to a Visa card. Includes credit cards and proprietary lines of credit.

Funds Disbursement: For FDC Compass, the best value for funds disbursement is 04 to identify that the originator used a deposit account to fund the disbursement. For Visa Platform Connect, the best value for funds disbursement is 05.

Credit Card Bill Payment: This value must be 02, 03, 04, or 05.

Specifications

• Field Type: Request

• Data Type: String with numbers only

• Data Length: 2

- REST API Field: senderInformation.account.fundsSource
- SCMP API Field: sender_source_of_funds
- Simple Order API Field: sender_sourceOfFunds

senderInformation.account.number

The account number of the entity funding the transaction. The value for this field can be a payment card account number or bank account number.

Specifications

• Field Type: Request

• Data Type: String with numbers only

• Data Length: 20

Mapping Information

• REST API Field: senderInformation.account.number

• SCMP API Field: sender_account_number

• Simple Order API Field: sender_accountNumber

senderInformation.address1

Street address of sender.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 50

Mapping Information

• REST API Field: senderInformation.address1

• SCMP API Field: sender_address

• Simple Order API Field: sender_address

senderInformation.administrativeArea

State of sender.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: senderInformation.administrativeArea

• SCMP API Field: sender_state

• Simple Order API Field: sender_state

Related information

State, Province, and Territory Codes for the United States and Canada

sender Information. country Code

Country of sender.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

 $\bullet \ REST \ API \ Field: sender Information. country Code$

• SCMP API Field: sender_country

• Simple Order API Field: sender_country

Related information

ISO Standard Country Codes

sender_date_of_birth

Date of birth of the sender.

Format: YYYMMDD

Specifications

• Field Type: Request

• Data Type: String with numbers only

• Data Length: 8

- REST API Field: senderInformation.dateOfBirth
- SCMP API Field: sender_date_of_birth
- Simple Order API Field: sender_dateOfBirth

senderInformation.firstName

First name of sender when the sender is an individual. When the sender is a business or government entity, use the **senderInformation.name** field instead.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP09 TCR3

• Position: 5-39

• Field: Account Owner Name-Given

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 35

Mapping Information

• REST API Field: senderInformation.firstName

• SCMP API Field: sender_firstname

• Simple Order API Field: sender_firstName

senderInformation.lastName

Last name of sender when the sender is an individual. When the sender is a business or government entity, use the **senderInformation.name** field instead.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP09 TCR3

• Position: 75-109

• Field: Account Owner Last Name

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 35

Mapping Information

• REST API Field: senderInformation.lastName

• SCMP API Field: sender_lastname

• Simple Order API Field: sender_lastName

senderInformation.locality

City of sender.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 25

Mapping Information

• REST API Field: senderInformation.locality

• SCMP API Field: sender_city

• Simple Order API Field: sender_city

senderInformation.middleInitial

Middle initial of sender when the sender is an individual. When the sender is a business or government entity, use the **senderInformation.name** field instead.

Format: YYYMMDD

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 1

Mapping Information

• REST API Field:senderInformation.middleInitial

• SCMP API Field: sender_middleinitial

• Simple Order API Field: sender_middleInitial

senderInformation.middleName

Middle name of sender when the sender is an individual. When the sender is a business or government entity, use the **sender_name** field instead.

Visa Platform Connect

The value for this field corresponds to the following data in the TC 33 capture file:

• Record: CP09 TCR3

• Position: 40-74

• Field: Account Owner Middle Name

The TC 33 Capture file contains information about the payments and credits that a merchant submits to Cybersource. Visa Platform Connect creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 35

Mapping Information

• REST API Field: senderInformation.middleName

• SCMP API Field: sender_middlename

• Simple Order API Field: sender_middleName

senderInformation.name

First name of whole name of the sender. Name of sender when the sender is a business or government entity.

FDC Compass

When the sender is an individual, use the **senderInformation.firstName** and **senderInformation.lastName** fields instead.

Visa Platform Connect

Funds Disbursement: This value is the first name of the originator sending the funds disbursement.

Specifications

Chase Paymentech Solutions

• Field Type: Request

• Data Type: String

• Data Length: 30

FDC Compass

• Field Type: Request

• Data Type: String

• Data Length: 24

Visa Platform Connect

• Field Type: Request

• Data Type: String

• Data Length: 30

Mapping Information

• REST API Field: senderInformation.name

• SCMP API Field: sender_name

• Simple Order API Field: sender_name

sender Information. phone Number

Phone number of the sender.

This field is supported only on FDC Compass.

Merchant Disbursement: This value is your business phone number.

Specifications

• Field Type: Request

• **Data Type:** String with numbers only

• Data Length: 20

- REST API Field: senderInformation.phoneNumber
- SCMP API Field: sender_phone_number
- Simple Order API Field: sender_phoneNumber

sender Information. postal Code

Postal code of sender.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 10

Mapping Information

• REST API Field: senderInformation.postalCode

• SCMP API Field: sender_postal_code

• Simple Order API Field: sender_postalCode

senderInformation.referenceNumber

Reference number generated by you that uniquely identifies the sender.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 19

Mapping Information

• REST API Field: senderInformation.referenceNumber

• SCMP API Field: sender_reference_number

• Simple Order API Field: sender_referenceNumber

serialNumber

Serial number of the terminal.

(I) Important:

After the serial number is set, it cannot be changed. To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 64

Mapping Information

• REST API Field: serialNumber

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

shippedDateInUTC

Date in UTC that the terminal was shipped.

Format: YYYY-MM-DDThh:mm:ssZ

To get this value, contact Cybersource customer support.

Example: 2021-08-11T22:47:57Z equals August 11, 2021, at 22:47:57 (10:47:57 p.m.). The T separates the date and the time. The Z indicates UTC.

Specifications

• Field Type: Request

• **Data Type:** String (date time)

• Data Length: Pre-defined format length

Mapping Information

• REST API Field: shippedDateInUTC

• **SCMP API Field:** No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

shipping Tracking Number

Tracking number from the shipping carrier.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 128

- REST API Field: shippingTrackingNumber
- SCMP API Field: No corresponding field
- Simple Order API Field: No corresponding field
- Secure Acceptance API Field: No corresponding field

status

Status of the terminal.

Valid values:

- Active
- Inactive

To set the status field as Active, you must set the paymentProcessor, terminals that have an Active status, the statusChangeReason field is set to In Production.

Specifications

• Field Type: Request

• Data Type: Enum of string

• Data Length: Pre-defined values

Mapping Information

• REST API Field: status

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

status Change Reason

Reason for change in status of the terminal.

Valid values:

- Broken/Damaged: Terminal is broken; does not work.
- End of Life: Terminal is not supported any more.
- In Production: Terminal is active.
- Lost/Stolen: Terminal is lost or stolen.
- Other: Terminal is inactive. (default)
- Pending Setup: Terminal has not been set up.
- Replaced: Terminal has been replaced.
- Returned: Terminal has been returned.

Specifications

- Field Type: Request
- Data Type: Enum of string
- Data Length: Pre-defined values

Mapping Information

• REST API Field: statusChangeReason

- SCMP API Field: No corresponding field
- Simple Order API Field: No corresponding field
- Secure Acceptance API Field: No corresponding field

submitTimeUtc

Time when the PIN debit credit was requested.

Format: YYYY-MM-DDThhmmssZ

Example: 2014-08-11T224757Z is equal to August 11, 2014, at 10:47:57 P.M.

The T separates the date and the time. The Z indicates UTC.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: submitTimeUtc

• SCMP API Field: pin_debit_credit_time

• Simple Order API Field: pinDebitCreditReply_dateTime

submitTimeUtc

Time when the PIN debit credit was requested.

Format: YYYY-MM-DDThhmmssZ

Example: 2014-08-11T224757Z is equal to August 11, 2014, at 10:47:57 P.M.

The T separates the date and the time. The Z indicates UTC.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: submitTimeUtc

• SCMP API Field: pin_debit_purchase_time

• Simple Order API Field: pinDebitPurchaseReply_dateTime

Time of authorization in UTC.

PIN debit

Time when the PIN debit credit, PIN debit purchase or PIN debit reversal was requested.

Terminal management

Time when the create device or update device service was requested

Specifications

• Field Type: Response

• Type: String

• **Length:** 20

Mapping Information

• REST API Field: submitTimeUTC

• SCMP API Field: auth_auth_time

 $\bullet \ Simple \ Order \ API \ Field: \ ccAuthReply_authorizedDateTime$

Time in UTC when the full authorization reversal was requested.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: submitTimeUTC

• SCMP API Field: auth_reversal_request_time

• Simple Order API Field: ccAuthReversalReply_requestDateTime

Time at which capture is requested in UTC.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: submitTimeUTC

• SCMP API Field: bill_bill_request_time

• Simple Order API Field: ccCaptureReply_requestDateTime

submit Time Utc

Date and time when the service was requested.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: submitTimeUtc

• SCMP API Field: credit_credit_request_time

 $\bullet \ Simple \ Order \ API \ Field: \ ccCreditReply_requestDateTime$

submit Time Utc

Date and time of authorization.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: submitTimeUtc

• SCMP API Field: incremental_auth_time

 $\bullet \ Simple \ Order \ API \ Field: ccIncremental AuthReply_authorized Date Time$

submitTimeUtc

Time of request in UTC format.

Format: YYYY-MM-DDThh:mm:ssZ

The P2PE confirmation timestamp is recorded only if the p2peConfirmation field is set to Confirmed.

Example: 2021-08-11T22:47:57Z equals August 11, 2021, at 22:47:57 (10:47:57 p.m.). The T separates the date and the time. The Z indicates UTC.

Specifications

• Field Type: Response

• **Data Type:** String (date time)

• Data Length: Formatted values

Mapping Information

• REST API Field: submitTimeUtc

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

Date and time when the service was requested.

PIN Debit

Time when the PIN debit credit, PIN debit purchase or PIN debit reversal was requested.

Returned by PIN debit credit, PIN debit purchase or PIN debit reversal.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: submitTimeUTC

• SCMP API Field: void_void_request_time

• Simple Order API Field: voidReply_requestDateTime

submitTimeUtc

Time when the PIN debit reversal was requested.

Format: YYYY-MM-DDThhmmssZ

Example: 2014-08-11T224757Z is equal to August 11, 2014, at 10:47:57 P.M.

The T separates the date and the time. The Z indicates UTC.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 20

Mapping Information

• REST API Field: submitTimeUtc

• SCMP API Field: pin_debit_reversal_time

• Simple Order API Field: pinDebitReversalReply_dateTime

te Bag Serial Number

Serial number of the tamper-evident bag used for shipping the terminal.

To get this value, contact Cybersource customer support.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 64

- REST API Field: teBagSerialNumber
- SCMP API Field: No corresponding field
- Simple Order API Field: No corresponding field
- Secure Acceptance API Field: No corresponding field

ticketNumbers

Optional ticket number to track the state of the terminal.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 128

Mapping Information

• REST API Field: ticketNumbers

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

 $\bullet \ \textbf{Secure Acceptance API Field:} \ \textbf{No corresponding field} \\$

tokenInformation.networkTokenOption

Indicates whether Cybersource should use a payment network token that is associated with a TMS token for an authorization.

Possible values:

- ignore: Use a tokenized card number for an authorization, even if the TMS token has an associated payment network token.
- prefer: Use an associated payment network token for an authorization if the TMS token has one; otherwise, use the tokenized card number.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 6

- REST API Field: tokenInformation.networkTokenOption
- SCMP API Field: tms_network_token_option
- Simple Order API Field: tokenSource_networkTokenOption

travelInformation.transit.airline.bookingReferenceNumber

Reference number for the airline booking. This field is used only by American Express Brighton.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 15

Mapping Information

 $\bullet \ REST \ Field: travel Information. transit. airline. booking Reference Number\\$

• SCMP API Field: airline_booking_reference

• Simple Order API Field: airlineData_bookingReference

Processor Field Names

The following list provides the processor-specific field name:

• American Express Brighton: No specific field name for the position in the record

travelInformation.duration

Number of days that the customer plans to stay at the lodging.

For a lodging deposit, the value for this field specifies the number of days covered by the advance payment.

Possible values: 01 through 99.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 2

Mapping Information

• REST API Field: travelInformation.duration

• SCMP API Field: duration

• Simple Order API Field: ccIncrementalAuthService_duration

travelInformation.legs[].carrierCode

International Air Transport Association (IATA) code for the carrier for this leg of the trip.

Required for each leg.

Payer Authentication

Payer Authentication services only use the first leg of the trip.

Specifications

• Field Type: Request

• Data Type:String

• Data Length:2

- REST API Field: travelInformation.legs[].carrierCode
- SCMP API Field: airline_leg#_carrier_code
- Simple Order API Field: airlineData_leg_#_carrierCode

travelInformation.legs[].destination

International Air Transport Association (IATA) code for the destination airport for this leg of the trip.

Payer Authentication

Payer Authentication services only use the first leg of the trip.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

Mapping Information

• REST API Field: travelInformation.legs[].destination

• SCMP API Field: airline_leg#_destination

• Simple Order API Field: airlineData_leg_#_destination

travelInformation.legs[].origination

International Air Transport Association (IATA) code for the originating airport for the first leg of the trip.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 3

Mapping Information

• REST API Field: travelInformation.legs[].origination

• SCMP API Field: airline_leg#_originating_airport_code

• Simple Order API Field: airlineData_leg_#_originatingAirportCode

travelInformation.numberOfPassengers

Number of passengers for whom the ticket was issued.

If you do not include this field in your request, Cybersource uses a default value of 1.

Specifications

• Field Type: Request

• Data Type: Integer

• Data Length: 3

- REST API Field: travelInformation.numberOfPassengers
- SCMP API Field: airline_number_of_passengers
- Simple Order API Field: airlineData_numberOfPassengers

travelInformation.passengers[].firstname

First name of the passenger to whom the ticket was issued.

If there are multiple passengers, include all listed on the ticket. Do not include special characters such as commas, hyphens, or apostrophes. Only ASCII characters are supported.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 60

Mapping Information

• REST API Field: travelInformation.passengers[].firstName

• SCMP API Field: airline_passenger#_firstname

• Simple Order API Field: airlineData_passenger_#_firstName

travelInformation.passengers.[]lastName

Last name of the passenger to whom the ticket was issued.

If there are multiple passengers, include all listed on the ticket. Do not include special characters such as commas, hyphens, or apostrophes. Only ASCII characters are supported.

Specifications

• Field Type: Request

• Data Type: String

• Data Length: 60

Mapping Information

• REST API Field: travelInformation.passengers.[]lastName

• SCMP API Field: airline_passenger#_lastname

• Simple Order API Field: airlineData_passenger_#_lastName

type

Type of point-of-sale (POS) terminal.

Valid values:

TERMINAL

MOBILE

Specifications

• Field Type: Request

• Data Type: Enum of string

• Data Size: Pre-defined values

Mapping Information

• REST API Field: type

• SCMP API Field: No corresponding field

• Simple Order API Field: No corresponding field

• Secure Acceptance API Field: No corresponding field

voidAmountDetails.currency

Currency used for the order.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 5

Mapping Information

• REST API Field: voidAmountDetails.currency

• SCMP API Field: void_void_currency

• Simple Order API Field: voidReply_currency

voidAmountDetails.originalTransactionAmount

Amount of the original transaction.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- SCMP API Field: original_transaction_amount
- Simple Order API Field: originalTransaction_amount

voidAmountDetails.voidAmount

Amount of the reversal.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

- REST API Field: voidAmountDetails.voidAmount
- SCMP API Field: pin_debit_reversal_auth_amount
- Simple Order API Field: pinDebitReversalReply_amount

voidAmountDetails.voidAmount

Amount that was voided.

Specifications

• Field Type: Response

• Data Type: String

• Data Length: 15

Mapping Information

• REST API Field: voidAmountDetails.voidAmount

• SCMP API Field: void_void_amount

• Simple Order API Field: voidReply_amount
