General Information

These release notes cover all releases to the production server for the week ending January 13, 2023.

Announcements

> ⚠️ **Warning:** Passing six-digit BINs can result in no match being generated when there are multiple possible matches. We recommend that you update your systems to pass eight-digit BINs as soon as possible.

Business Center Multifactor Authentication

As part of Cybersource's ongoing commitment to security, the Business Center now supports multifactor authentication. You may be required to verify your identity through a one-time PIN sent by email or SMS. After the PIN is verified, you are logged in to your account.

> 🔵 **Important:** To prevent login disruptions, update your phone number and email address in your account.

New Status Page

Cybersource now has a status page that you can subscribe to and that will keep you informed of issues or service interruptions. For more information on the status page and how to use it, read the support article here.

Partner Risk Controls Support for BIN Classification

At this time, Partner Risk Controls support only BIN classification on network tokens for Visa, Mastercard, and Discover cards. All other types of network token transactions will continue to follow these rules:

- All other network token transactions are treated as domestic transactions.

- All other network tokens default to the domestic credit card type.

- No validation occurs on wallet load funding if an international network token is processed.

- No blocking is possible for debit or prepaid transactions because all network tokens are treated as the credit card type.

- Network tokens without BIN classification have no effect on the electronic commerce indicator (ECI) classification function.

Customers will be notified when the BIN Lookup Service recognizes other network tokens.

Features Introduced This Week

- [RM-15111] The `/tss/v2/searches` endpoint now returns the field, `pointOfSaleInformation.emv.tags`, in responses.

- [RM-15868] Subscription email templates now reference payment credentials instead of payment cards.

- [RM-15868] Subscriptions are now defined as recurring payments that occurs at least twice, with at least one payment per year. Subscription dates at the end of the month are preserved. Customers can no longer partially authorize a subscription payment.

- [RM-18435] Recurring transactions are now blocked for Maestro International cards.

- [RM-18435] Response code mappings for Streamline, Six, and Omnipay Direct have been updated.

- [RM-18435] The CB2A gateway now has enhanced ECI derivation and updated UCAF collection indicators.

- [RM-18435] The following fields are now available in the complete logs in the Business Center: `aggregated_auth_indicator`, `auth_deferred_auth_indicator`, `emv_request_repeat`, `transient_token`, `transportation_mode`, and `debt_recovery_indicator`.

- [RM-18435] To better match Visa specifications, request and response field mappings on Presto for pin debit purchase, credit, and reversal have been updated.

- [RM-18448] Moneris merchants can now run follow-on credits up to 180 days after the original transaction.

- [RM-18449] Moneris merchants can now see payment network transaction IDs in the Business Center.

- [RM-18939] Visa and American Express transactions using Google Pay or Apple Pay on Moneris now have the CAVV sent in Base64 format.

- [RM-19087] The Quod endpoint now supports CPF tax IDs plus Credit Card Flag values, to permit merchants to customize the services they wish to use.

- [RM-19118] Transaction identifiers (XIDs) for 3-D Secure transactions are now optional on OmniPay Direct, Paymentech, and Streamline.

- [RM-19144] VantivCNP error codes 112-118 are now mapped to the Cybersource error code 233 (DINVALIDDATA).

- [RM-19410] The National Bank of Kuwait now has a new country code and acquirer BIN added.

Fixed Issues

- [RM-18890] Issues with exporting Profile Rule Performance reports and creating one-time reports have been resolved.

- [RM-19160] Mastercard installment transactions no longer fail for Chilean merchants on Visa Platform Connect.

- [RM-18435] 3-D Secure data are no longer sent with MOTO and recurring transactions on HSBC.

- [RM-18435] Mastercard Trace IDs on HBOS are now formatted with two trailing spaces, as expected.
