General Information

These release notes cover all releases to the production server for the week ending May 7, 2021.

Announcements

New Response Field for Secure Acceptance

Cybersource added a new response field, **payment_account_reference**, to Secure Acceptance in both the Hosted Checkout and Checkout API integrations.

To avoid impact:

- Parse the response data according to the names of the fields instead of their order in the response. For more information on parsing response fields, see the *Secure Acceptance Checkout API Integration Guide* or *Secure Acceptance Hosted Checkout Integration Guide* for your scripting language.
- The signature that you generate must be the same value that is included in the signature response field.
- Your error handler should use the decision field to determine the transaction result if it receives a reason code that it does not recognize.
- If your implementation expects static response fields, build the signature string dynamically instead, as specified in the *Secure Acceptance Checkout API Integration Guide* or *Secure Acceptance Hosted Checkout Integration Guide* and the sample code.

The Secure Acceptance integration guides and the sample code documentation are at this location:

https://www.cybersource.com/en-us/support/technical-documentation/apis-and-integration.html#SecureAcceptance

Contact your customer support, technical account manager, or account manager for more details.

Cybersource through VisaNet Rebranding

The Cybersource through VisaNet product is now called *Visa Platform Connect*.

Features Introduced This Week

- [RM-10043] Account Manager now has a new permission, **VTReaderSettingsManagement**. Also, the Virtual Terminal has enhancements for EMV merchants, including support for running authorization/sale transactions.
- [RM-10223] Secure Acceptance is updated to support Flex capture contexts and transient tokens. Also, support for 3D Secure 2 is enhanced with a unique reference number for each JSON web token and with improved timeouts and retries.
- [RM-9206] The PayerAuthConfigAPI now supports Carte Bancaire, Elo, and UnionPay International cards, and has improved audit logging.
- [RM-9686] Business Center reports now support fields for merchant-initiated and customer-initiated transactions.
- [RM-9771] The Decision Manager Detail Report now supports fields for new decision information codes.
- [RM-9800] For Visa Platform Connect merchants, the Transaction Details page now includes an outage indicator and the middle name of the sender and recipient.
- [RM-9874] For the Organization Management Service, underscores are now supported in organization IDs.
- [RM-9938] Fees are revised for GPN transactions for over 200 card types and charge types, to stay in compliance with GPN.

Fixed Issues

- [RM-9486] The Case Details screen now shows third-party card information directly rather than directing users to a link.
- [RM-9874] For the Organization Management Service, the Business Center no longer forces logins and notes to include "_acct".
